Preface — v

Christoph Aistleitner

Metric number theory, lacunary series and systems of dilated functions — 1

- 1 Uniform distribution modulo 1 — 2
- 2 Metric number theory — 4
- 3 Discrepancy — 6
- 4 Lacunary series — 7
- 5 Almost everywhere convergence — 10
- 6 Sums involving greatest common divisors — 12

József Beck

Strong uniformity — 17

- 1 Introduction — 17
- 2 Superuniformity and super-duper uniformity — 26
- 2.1 Superuniformity of the typical billiard paths — 26
- 2.2 Super-duper uniformity of the 2-dimensional ray — 37
- 3 Superuniform motions — 41
- 3.1 Billiards in other shapes — 41
- 3.2 Superuniformity of the geodesics on an equifacial tetrahedron surface — 42

Dmitriy Bilyk

Discrepancy theory and harmonic analysis — 45

- 1 Introduction — 45
- 2 Exponential sums — 46
- 3 Fourier analysis methods — 49
- 3.1 Rotated rectangles — 49
- 3.2 The lower bound for circles — 51
- 3.3 Further remarks — 53
- 4 Dyadic harmonic analysis: discrepancy function estimates — 54
- 4.1 L^p -discrepancy, $1 < p < \infty$ — 55
- 4.2 The L^∞ discrepancy estimates — 56
- 4.3 The other endpoint, L^1 — 58

Josef Dick and Friedrich Pillichshammer

Explicit constructions of point sets and sequences with low discrepancy — 63

- 1 Introduction — 63
- 2 Lower bounds — 65
- 3 Upper bounds — 67
- 4 Digital nets and sequences — 69
- 5 Walsh series expansion of the discrepancy function — 71
- 6 The construction of finite point sets according to Chen and Skriganov — 77
- 7 The construction of infinite sequences according to Dick and Pillichshammer — 79
- 8 Extensions to the \mathcal{L}_q discrepancy — 82
- 9 Extensions to Orlicz norms of the discrepancy function — 83

Michael Drmota

Subsequences of automatic sequences and uniform distribution — 87

- 1 Introduction — 87
- 2 Automatic sequences — 90
- 3 Subsequences along the sequence $\lfloor n^c \rfloor$ — 93
- 4 Polynomial subsequences — 95
- 5 Subsequences along the primes — 98

Henri Faure

On Atanassov's methods for discrepancy bounds of low-discrepancy sequences — 105

- 1 Introduction — 105
- 2 Atanassov's methods for Halton sequences — 107
 - 2.1 Review of Halton sequences — 107
 - 2.2 Review of previous bounds for the discrepancy of Halton sequences — 108
 - 2.3 Atanassov's methods applied to Halton sequences — 108
 - 2.4 Scrambling Halton sequences with matrices — 113
- 3 Atanassov's method for (t, s) -sequences — 118
 - 3.1 Review of (t, s) -sequences — 118
 - 3.2 Review of bounds for the discrepancy of (t, s) -sequences — 119
 - 3.3 Atanassov's method applied to (t, s) -sequences — 119
 - 3.4 The special case of even bases for (t, s) -sequences — 121
- 4 Atanassov's methods for generalized Niederreiter sequences and (t, e, s) -sequences — 124

Peter Hellekalek

The hybrid spectral test: a unifying concept — 127

- 1 Introduction — 127
- 2 Adding digit vectors — 129
- 3 Notation — 132
- 4 The hybrid spectral test — 134
- 5 Examples — 137
- 5.1 Example I: Integration lattices — 137
- 5.2 Example II: Extreme and star discrepancy — 140

Peter Kritzer, Friedrich Pillichshammer, and Henryk Woźniakowski

Tractability of multivariate analytic problems — 147

- 1 Introduction — 147
- 2 Tractability — 149
- 3 A weighted Korobov space of analytic functions — 154
- 4 Integration in $H(K_{s,a,b})$ — 156
- 5 L_2 -approximation in $H(K_{s,a,b})$ — 162
- 6 Conclusion and outlook — 169

Gerhard Larcher

Discrepancy estimates for sequences: new results and open problems — 171

- 1 Introduction — 171
- 2 Metrical and average type discrepancy estimates for digital point sets and sequences and for good lattice point sets — 174
- 3 Discrepancy estimates for and applications of hybrid sequences — 181
- 4 Miscellaneous problems — 185

Gunther Leobacher

A short introduction to quasi-Monte Carlo option pricing — 191

- 1 Overview — 191
- 2 Foundations of financial mathematics — 192
- 2.1 Bonds, stocks and derivatives — 192
- 2.2 Arbitrage and the no-arbitrage principle — 194
- 2.3 The Black–Scholes model — 196
- 2.4 SDE models — 197
- 2.5 Lévy models — 199
- 2.6 Examples — 200
- 3 MC and QMC simulation — 201
- 3.1 Nonuniform random number generation — 201
- 3.2 Generation of Brownian paths — 208
- 3.3 Generation of Lévy paths — 214

3.4	Multilevel (quasi-)Monte Carlo —	216
3.5	Examples —	218

Dirk Nuyens

The construction of good lattice rules and polynomial lattice rules — 223

1	Lattice rules and polynomial lattice rules —	223
1.1	Lattice rules —	224
1.2	Polynomial lattice rules —	225
2	The worst-case error —	227
2.1	Koksma–Hlawka error bound —	227
2.2	Lattice rules —	229
2.3	Polynomial lattice rules —	232
3	Weighted worst-case errors —	236
4	Some standard spaces —	238
4.1	Lattice rules and Fourier spaces —	238
4.2	Randomly-shifted lattice rules and the unanchored Sobolev space —	239
4.3	Tent-transformed lattice rules and the cosine space —	241
4.4	Polynomial lattice rules and Walsh spaces —	243
5	Component-by-component constructions —	245
5.1	Component-by-component construction —	245
5.2	Fast component-by-component construction —	249
6	Conclusion —	252

Index — 257
