

Contents

1 Basic Theory of Optical Surfacing Systems	1
1.1 Front Matter	1
1.1.1 The Applications of Optical Segments	1
1.1.2 Characteristics of Aspherical Surfaces	3
1.1.3 Optical Surfacing Systems: Applications and Developments	4
1.2 Basic Principle of Deterministic Optical Surfacing Process	10
1.2.1 Preston Model for Material Removal	10
1.2.2 Convolution Model of Material Removal Process	11
1.2.3 Linear Shift Invariable System	11
1.3 Assessment Criteria and Measurements of Optical Surface Quality	12
1.3.1 Errors in Low-Spatial Frequency Range	12
1.3.2 Errors in Mid-spatial Frequency Range	14
1.3.3 Errors in High-Spatial Frequency Range	17
References	18
2 Tool Influence Functions	23
2.1 Front Matter for Tool Influence Functions	23
2.2 The Assessment Criteria of a TIF	24
2.2.1 Peak and Volume Removal Rate	24
2.2.2 Central-Peak Factor for Removal Capability	25
2.2.3 Cutoff Frequency for Removal Capability	25
2.3 TIF Model Constructions and Optimizations	26
2.3.1 Computer-Controlled Polishing with Small Tools	26
2.3.2 Magnetorheological Finishing System	41
2.3.3 Magnetorheological Jet Polishing System	49
2.3.4 Electrorheological Finishing	59
References	73

3	Finishing Paths	75
3.1	Overview of Finishing Paths	75
3.2	Multiple Tool Path Mode	76
3.2.1	Raster Paths Mode	76
3.2.2	Spiral Paths Mode	77
3.2.3	Concentric Circle Path Mode	81
3.2.4	Various Fractal Path Modes	83
3.2.5	Surface Form-Based Paths	88
3.2.6	Boundary-Based Paths	90
3.3	Peano-Like Tool Path	91
3.3.1	Insufficiencies of the Peano Path	91
3.3.2	Peano-Like Path Construction on Aspherical Surfaces	92
3.4	The Influence of Paths on the Convergence Rate of Surface Form	107
3.4.1	Polishing Tool Paths	107
3.4.2	Circular Tool Impression	111
3.4.3	Elliptic Tool Impression	115
3.4.4	Experiments	123
3.5	The Influence of Tool Path on Mid-frequency Errors	126
3.5.1	Path Type to Mid-spatial Frequency Errors	126
	References	131
4	Dwell-Time Map	133
4.1	Calculating Dwell Time by the Convolution Iteration Method	134
4.1.1	Convolution Iteration Method	134
4.1.2	Performance Conclusion	136
4.2	Fourier Transform Method	137
4.2.1	Description of the Algorithm	137
4.2.2	Results with Different Approximate Item	142
4.3	Subaperture Corrosion Method	147
4.3.1	SACI Dwell-Time Algorithm	147
4.3.2	Simulation Process and Results	151
4.3.3	Validation of Experiments	155
4.4	Implementation of Dwell-Time Map	156
4.4.1	The Source of Implementation Errors of Dwell Time	158
4.4.2	Four Compensation Strategies	159
4.4.3	Compensation Model Establishment and Experimental Validation	164
