|          |  |           |
|----------|--|-----------|
| <b>1</b> | <b>Introduction</b>  | <b>1</b>  |
| 1.1      | Walking randomly . . . . .   | 2         |
| 1.2      | From walking particles to walking waves . . . . .  | 4         |
| 1.3      | Why quantum walks? . . . . .   | 6         |
| 1.4      | How to implement a quantum walk . . . . .  | 7         |
| <b>2</b> | <b>Theory</b>  | <b>11</b> |
| 2.1      | Waves, spreads and clicks . . . . .  | 12        |
| 2.2      | Quantum coins and steps . . . . .  | 13        |
| 2.2.1    | Walking on a line . . . . .  | 14        |
| 2.2.2    | How to evolve - discrete or continuous . . . . .   | 20        |
| 2.2.3    | Quantum walks in momentum space . . . . .  | 20        |
| 2.3      | Entanglement . . . . .   | 26        |
| 2.4      | Quantum walks in optics . . . . .  | 26        |
| 2.4.1    | Creation and annihilation of photons . . . . .   | 27        |
| 2.4.2    | Quantum walk with beam splitters . . . . .   | 27        |
| 2.4.3    | Quantum walks with creation operators: Single photons<br>and coherent states . . . . .       | 29        |
| 2.4.4    | Limitations of coherent light: Multi-particle quantum walks . . . . .                        | 32        |
| 2.5      | A multi-walker quantum walk formalism using creation operators . . . . .                     | 36        |
| <b>3</b> | <b>A Quantum Walk in Time</b>  | <b>39</b> |
| 3.1      | Scalability, stability and flexibility . . . . .   | 39        |
| 3.2      | Experimental challenges for quantum walk implementations . . . . .                           | 40        |
| 3.3      | How to perform a time walk . . . . .   | 42        |
| 3.3.1    | Flipping the polarization . . . . .  | 43        |
| 3.3.2    | Stepping in time . . . . .   | 44        |
| 3.3.3    | Feedback loop and detection . . . . .  | 48        |
| 3.4      | Photons walking the line:<br>Experimental implementation of a quantum walk in time . . . . . | 51        |
| 3.5      | Experimental results . . . . .   | 55        |
| 3.5.1    | Hadamard walk . . . . .  | 55        |
| 3.5.2    | Adapting the theory . . . . .  | 58        |
| 3.5.3    | Changing the coin . . . . .  | 59        |
| 3.6      | Problems and limitations . . . . .   | 62        |
| 3.6.1    | Limited time and decoherence . . . . .   | 62        |

|          |  |            |
|----------|--|------------|
| 3.6.2    | Losses . . . . .   | 63         |
| 3.6.3    | The influence of multi-photon components on APDs . . . .                         | 64         |
| 3.6.4    | Back reflections . . . . .   | 65         |
| 3.6.5    | How far can we walk (theoretically)? . . . . .                                   | 66         |
| 3.7      | Conclusions . . . . .  | 67         |
| <b>4</b> | <b>From Ballistic Spread to Localization</b>                                     | <b>69</b>  |
| 4.1      | Changes in the experimental setup . . . . .                                      | 71         |
| 4.2      | Experimental results . . . . .   | 74         |
| 4.2.1    | Hadamard walk . . . . .  | 74         |
| 4.2.2    | A speedup due to slow fluctuations . . . . .                                     | 76         |
| 4.2.3    | Photons on a random walk . . . . .   | 80         |
| 4.2.4    | Quantum walks with static disorders – the Anderson localization effect . . . . . | 83         |
| 4.2.5    | The walk from quantumness to classicallity . . . . .                             | 85         |
| 4.2.6    | Comparison of the spread in different environments . . . . .                     | 86         |
| 4.3      | What to do with the losses... a different approach . . . . .                     | 89         |
| 4.4      | Where do we walk from here? . . . . .  | 90         |
| <b>5</b> | <b>Photons Walking the Plane</b>   | <b>93</b>  |
| 5.1      | From one to two dimensions . . . . .   | 95         |
| 5.1.1    | Theory of a quantum walk in two dimensions . . . . .                             | 95         |
| 5.1.2    | One/two walkers in two/one dimensions . . . . .                                  | 97         |
| 5.1.3    | 4D quantum coins and their two-particle interpretation . . . .                   | 99         |
| 5.2      | A two-dimensional quantum walk in time . . . . .                                 | 102        |
| 5.2.1    | Stepping in four directions . . . . .  | 102        |
| 5.2.2    | Coins with four sides . . . . .  | 105        |
| 5.3      | A two-dimensional quantum walk in time experiment . . . . .                      | 107        |
| 5.3.1    | Experimental details . . . . .   | 111        |
| 5.3.2    | Experimental simulations of two-particle quantum walks . . . .                   | 114        |
| 5.3.3    | Limitations and imperfections . . . . .  | 123        |
| 5.4      | Conclusion and Outlook - How many dimensions can we explore? . . .               | 124        |
| <b>6</b> | <b>Conclusions and Outlook</b>   | <b>127</b> |
| <b>A</b> | <b>Simulation of two-particle quantum walks with a 2D quantum walk</b>           | <b>131</b> |
| A.1      | Distinguishable particles . . . . .  | 131        |
| A.2      | Indistinguishable particles . . . . .  | 132        |
