

Contents

1	The three-dimensional structure of proteins	1
1.1	Structure of the native state	1
1.2	Protein folding transition states	9
1.3	Structural determinants of the folding rate constants	12
1.4	Support of structure determination by protein folding simulations	20
2	Liquid chromatography of biomolecules	23
2.1	Ion exchange chromatography	23
2.2	Gel filtration chromatography	28
2.3	Affinity chromatography	31
2.4	Counter-current chromatography and ultrafiltration	33
3	Mass spectrometry	37
3.1	Principles of operation and types of spectrometers	37
3.1.1	Sector mass spectrometer	38
3.1.2	Quadrupole mass spectrometer	39
3.1.3	Ion trap mass spectrometer	39
3.1.4	Time-of-flight mass spectrometer	40
3.1.5	Fourier transform mass spectrometer	43
3.1.6	Ionization, ion transport and ion detection	44
3.1.7	Ion fragmentation	45
3.1.8	Combination with chromatographic methods	46
3.2	Biophysical applications	49
4	X-ray structural analysis	59
4.1	Fourier transform and X-ray crystallography	59
4.1.1	Fourier transform	59
4.1.2	Protein X-ray crystallography	69
4.1.2.1	Overview	69
4.1.2.2	Production of suitable crystals	69
4.1.2.3	Acquisition of the diffraction pattern	71

4.1.2.4	Determination of the phases: heavy atom replacement	76
4.1.2.5	Calculation of the electron density and refinement	83
4.1.2.6	Cryocrystallography and time-resolved crystallography	84
4.2	X-ray scattering	85
4.2.1	Small angle X-ray scattering (SAXS)	85
4.2.2	X-ray backscattering	88
5	Protein infrared spectroscopy	91
5.1	Spectrometers and devices	92
5.1.1	Scanning infrared spectrometers	92
5.1.2	Fourier transform infrared (FTIR) spectrometers	92
5.1.3	LIDAR, optical coherence tomography, attenuated total reflection and IR microscopes	96
5.2	Applications	102
6	Electron microscopy	107
6.1	Transmission electron microscope (TEM)	107
6.1.1	General design	107
6.1.2	Resolution	109
6.1.3	Electron sources	110
6.1.4	TEM grids	112
6.1.5	Electron lenses	112
6.1.6	Electron-sample interactions and electron spectroscopy	115
6.1.7	Examples of biophysical applications	117
6.2	Scanning transmission electron microscope (STEM)	119
7	Scanning probe microscopy	121
7.1	Atomic force microscope (AFM)	121
7.2	Scanning tunneling microscope (STM)	133
7.3	Scanning nearfield optical microscope (SNOM)	135
7.3.1	Overcoming the classical limits of optics	135
7.3.2	Design of the subwavelength aperture	138
7.3.3	Examples of SNOM applications	142
7.4	Scanning ion conductance microscope, scanning thermal microscope and further scanning probe microscopes	143
8	Biophysical nanotechnology	147
8.1	Force measurements in single protein molecules	147
8.2	Force measurements in a single polymerase-DNA complex	150

8.3 Molecular recognition	152
8.4 Protein nanoarrays and protein engineering	155
8.5 Study and manipulation of protein crystal growth	158
8.6 Nanopipettes, molecular diodes, self-assembled nanotransistors, nanoparticle-mediated transfection, and further biophysical nanotechnologies	159
9 Proteomics: high throughput protein functional analysis	165
9.1 Target discovery	166
9.2 Interaction proteomics	168
9.3 Chemical proteomics	172
9.4 Lab-on-a-chip technology, mass-spectrometric array scanners, and robots	173
9.5 Structural proteomics	175
10 Ion mobility spectrometry	177
10.1 General design of spectrometers	177
10.2 Resolution and sensitivity	182
10.3 IMS-based “sniffers”	185
10.4 Design details	186
10.5 Detection of biological agents	195
11 Φ -Value analysis	199
11.1 The method	199
11.2 High resolution of six protein folding transition states	201
12 Evolutionary computer programming	205
12.1 Reasons for the necessity of self-evolving computer programs	205
12.2 General features of the method	205
12.3 Protein folding and structure simulations	208
12.4 Evolution of nanooptical devices made from nanoparticles	209
12.4.1 Materials and methods	209
12.4.2 Results and discussion	210
12.5 Further potential applications	212
13 Rapid partial protein ladder sequencing	215
13.1 Principle of operation	215
13.2 An example: myoglobin	216

13.3 Potential experimental problems 221

14 Surface labeling analysis of protein interactions 223

14.1 Principle of operation 223

14.2 An example: NHS-biotin label 224

14.3 Potential experimental problems 226

15 Conclusions 229

16 References 231
