Preface — x

Contributing authors — xiii

Stefania Cometa and Luigia Sabbatini

1 Introductory remarks on polymers and polymer surfaces — 1

1.1 Why polymers? — 1

1.1.1 Generality — 1

1.1.2 Synthesis — 1

1.1.3 Classification and nomenclature — 3

1.1.4 Morphology and properties — 4

1.2 Why to investigate a polymer surface? — 8

1.2.1 Nature and dynamics of polymer surfaces — 9

1.2.1.1 Vibrational dynamics of macromolecules — 9

1.2.1.2 Changes in thermodynamic properties on the surface — 10

1.2.1.3 Rotation of functional groups on polymer backbones in response to different environmental conditions — 13

1.2.1.4 Surface interdiffusion or segregation of copolymers or polymer blends — 17

1.2.2 Surface modification of polymers — 18

1.2.2.1 Improvement of wettability — 18

1.2.2.2 Improvement of porosity or roughening — 19

1.2.2.3 Improvement of adhesion — 23

1.2.2.4 Interaction of polymer with biological environment: Biocompatibility — 25

1.2.2.5 Improvement of conductivity — 26

1.2.3 Possibility of predicting polymer performances by surface characterization techniques — 28

References — 30

Beat A. Keller

2 Investigation of polymer surfaces by time-of-flight secondary ion mass spectrometry — 39

2.1 Introduction — 39

2.1.1 Analysis of surfaces — 39

2.1.2 The SIMS process: A detailed approach of theory and instruments — 40

2.1.2.1 Sputter process and SSIMS approach — 41

2.1.2.2 Mass analyzer systems — 43

2.1.2.3 Ion sources and primary ions — 43

2.1.2.4 Surface ionization ion guns — 44

2.1.2.5	Duoplasmatron and gas ion sources — 45
2.1.2.6	Liquid metal ion guns — 45
2.1.2.7	Gas cluster ion sources — 46
2.1.2.8	High-resolution ion images obtained from cluster LMIG sources — 47
2.2	TOF-SIMS investigations of polymer materials — 49
2.2.1	General remarks — 49
2.2.2	Polymers — 49
2.2.2.1	Polydimethylsiloxane — 51
2.2.2.2	Polystyrene — 52
2.2.2.3	Polyacrylates — 53
2.2.2.4	Fluorinated polymers — 53
2.2.2.5	Poly(ethyleneterephthalate) — 55
2.2.2.6	Polyethylene glycol — 55
2.2.2.7	Spectra libraries and G-SIMS approach — 55
2.2.2.8	Multivariate analysis and principal component analysis — 57
2.2.3	Polymer additives — 58
2.2.4	Copolymers — 59
2.2.5	Multicomponent polymers (polymer blends) — 62
2.2.6	Plasma modification and deposition — 63
2.2.7	Other applications — 65
	References — 66

Elvira De Giglio, Nicoletta Ditaranto, and Luigia Sabbatini

3 Polymer surface chemistry: Characterization by XPS — 73

3.1	Introduction — 73
3.2	Photoelectron spectroscopy: A brief history — 74
3.2.1	Basic principles — 74
3.2.2	Spectroscopic and X-ray notations — 76
3.3	Instrumentation — 76
3.3.1	Vacuum system — 78
3.3.2	X-ray sources — 78
3.3.2.1	Dual Mg/Al anode X-ray tube — 78
3.3.2.2	Monochromatic source — 79
3.3.2.3	Synchrotron radiation source — 79
3.3.3	Energy analyzers — 79
3.3.4	Detectors — 81
3.3.5	Charge compensation — 81
3.3.6	Small-area XPS: imaging and mapping — 82
3.3.7	Ambient-pressure photoelectron spectroscopy — 83
3.4	Chemical information from XPS — 83
3.5	Chemical shift and its significance in the analysis of polymers — 87
3.6	Chemical derivatization techniques in conjunction with XPS — 89
3.7	Polymers surface segregation — 93

- 3.8 Polymers physical treatments/grafting — 98
- 3.9 Polymers aging — 104
- References — 107

Filippo Mangolini and Antonella Rossi

- 4 Attenuated total reflection-Fourier transform infrared spectroscopy: A powerful tool for investigating polymer surfaces and interfaces — 113**
 - 4.1 Principles of Fourier transform infrared spectroscopy — 113
 - 4.2 Theory of attenuated total reflection FTIR spectroscopy — 114
 - 4.2.1 Propagation of IR radiation through a planar interface between two isotropic media — 114
 - 4.2.2 Propagation of IR radiation through stratified media — 118
 - 4.2.3 Penetration depth and effective thickness — 121
 - 4.2.3.1 Penetration depth in ATR/FTIR spectroscopic analysis of polymers — 125
 - 4.2.4 Transmission FTIR vs ATR/FTIR spectroscopy — 126
 - 4.3 Experimental methods in ATR/FTIR spectroscopy — 128
 - 4.3.1 Internal reflection elements — 128
 - 4.3.2 Internal reflection attachments — 129
 - 4.3.3 Metal underlayer ATR/FTIR spectroscopy — 130
 - 4.3.3.1 Effect of metal underlayer on penetration depth in ATR/FTIR spectroscopic analysis of polymers — 133
 - 4.4 Potentials and limitations of ATR/FTIR spectroscopy — 137
 - 4.5 Applications of ATR/FTIR spectroscopy — 138
 - 4.5.1 ATR/FTIR spectroscopy in polymer science — 138
 - 4.5.2 *In situ* ATR/FTIR spectroscopy of tribochemical phenomena — 140
 - Acknowledgments — 147
 - References — 147

Dalia Yablon

- 5 Scanning probe microscopy of polymers — 153**
 - 5.1 Introduction — 153
 - 5.2 Sample preparation — 155
 - 5.3 Phase imaging — 156
 - 5.3.1 Background on phase imaging — 156
 - 5.3.2 Applications of phase imaging to polymer materials — 156
 - 5.4 Multifrequency imaging — 159
 - 5.5 Nanorheological mapping — 160
 - 5.6 Thermal/spectroscopic measurements — 163
 - 5.7 Environmental measurements — 164
 - 5.8 Conclusions — 165
 - References — 166

Miroslav Šlouf, Tařana Vackov, Frantiřek Lednick, and Petr Wandrol

6 Polymer surface morphology: Characterization by electron microscopies — 169

- 6.1 Introduction — 169
- 6.2 Scanning electron microscopy — 169
 - 6.2.1 SEM: Principles — 169
 - 6.2.1.1 Microscope and image formation — 169
 - 6.2.1.2 Interaction of the electron beam with the specimen — 171
 - 6.2.2 SEM: Classical modes — 173
 - 6.2.2.1 SE imaging — 174
 - 6.2.2.2 BSE imaging — 174
 - 6.2.2.3 EDX spectra — 175
 - 6.2.2.4 STEM imaging — 177
 - 6.2.3 SEM: Modern trends — 177
 - 6.2.3.1 Variable-pressure SEM — 177
 - 6.2.3.2 Variable-temperature SEM — 179
 - 6.2.3.3 Low-voltage SEM — 180
 - 6.2.3.4 Multidimensional SEM — 180
 - 6.2.4 SEM: Further possibilities — 181
 - 6.2.4.1 Spectroscopic methods — 181
 - 6.2.4.2 Methods connected with crystal structure of samples — 182
 - 6.2.4.3 Methods using sample-specific interactions with electron beam — 182
- 6.3 Transmission electron microscopy — 182
- 6.4 Sample preparation — 183
 - 6.4.1 Overview of polymer materials — 183
 - 6.4.2 Specific features of polymer materials — 183
 - 6.4.2.1 Charging and electron-beam damage — 183
 - 6.4.2.2 Skin-core effect — 184
 - 6.4.2.3 Low contrast between components — 185
 - 6.4.3 Preparation techniques for polymer materials — 185
 - 6.4.3.1 Direct observation of polymer surface — 186
 - 6.4.3.2 Fracturing — 186
 - 6.4.3.3 Etching — 187
 - 6.4.3.4 Cutting and staining — 188
 - 6.4.3.5 Special techniques — 189
- 6.5 Applications — 191
 - 6.5.1 Homopolymers — 191
 - 6.5.2 Copolymers — 193
 - 6.5.3 Polymer blends — 195
 - 6.5.4 Polymer composites — 197
 - 6.5.5 Special applications — 198
 - 6.5.5.1 Low-voltage SEM in polymer science — 198

- 6.5.5.2 Wet specimens in polymer science — 199
- 6.5.5.3 Further applications — 200
- Acknowledgments — 201
- References — 201

Fabio Palumbo and Rosa Di Mundo

7 Wettability: Significance and measurement — 207

- 7.1 Introduction — 207
- 7.2 CA and surface energy — 210
 - 7.2.1 Surface energy evaluation — 211
 - 7.2.1.1 Critical surface energy method — 212
 - 7.2.1.2 Multicomponent approaches — 215
 - 7.2.1.3 Particular cases: High-energy surfaces and granular materials — 215
 - 7.2.2 Considerations on surface energy evaluation — 216
- 7.3 CA hysteresis — 218
- 7.4 Measurement methods for CA — 222
 - 7.4.1 Direct measurement by optical goniometry — 222
 - 7.4.2 Force tensiometry — 225
 - 7.4.3 Approach comparison — 226
- 7.5 Application of CA measurement — 227
 - 7.5.1 From hydrophobic to water- and oil-repellent materials — 227
 - 7.5.2 Hydrophilic to super-hydrophilic materials — 233
 - 7.5.3 Hydrophobic recovery of hydrophilic surfaces — 235
 - 7.5.4 CA on porous surfaces — 238
 - 7.5.5 Acid-base characterization of polymeric surfaces — 239
- References — 241

Eva Bittrich and Klaus-Jochen Eichhorn

8 Advances of spectroscopic ellipsometry in the analysis of thin polymer films-polymer interfaces — 247

- 8.1 Introduction — 247
 - 8.1.1 Basics of ellipsometry — 247
- 8.2 New ellipsometric methods, techniques, and aspects — 250
 - 8.2.1 Optical dispersion — 250
 - 8.2.2 In situ setups — 253
 - 8.2.2.1 Liquid cells for measurements in solution — 253
 - 8.2.2.2 Coupling ellipsometry with quartz crystal microbalance — 254
 - 8.2.2.3 Total internal reflection ellipsometry — 256
 - 8.2.3 In-line monitoring — 257
 - 8.2.3.1 Monitoring processes in a vacuum chamber — 258
 - 8.2.3.2 R2R fabrication processes — 258
 - 8.2.4 Micropatterned films — 259

8.2.4.1	VIS imaging ellipsometry — 259
8.2.4.2	Microfocus-mapping IR ellipsometry — 260
8.3	Selected architectures of polymer films, blends, and composites — 261
8.3.1	Polymer blends and cross-linked polymer films — 261
8.3.2	T _g in thin polymer films of different architectures: Confinement effects — 262
8.3.3	Polymer-NP composites — 264
8.3.4	Polymers in nanostructured surfaces — 266
8.4	Polymer layers absorbing in the VIS spectral range — 267
8.4.1	Chemical modification with dye molecules — 267
8.4.2	Semiconducting polymers and blends for OPV and OLED — 268
8.5	Swelling and adsorption processes: Proteins and stimuli-responsive polymers — 271
8.5.1	Swelling of stimuli-responsive polymer layers — 271
8.5.2	Protein adsorption at soft polymer surfaces — 274
	References — 278
