Preface — xlii

Thibault Damour

The general relativistic two-body problem — 1

- 1 Introduction — 1
 - 2 Multichart approach to the N -body problem — 4
 - 3 EOB description of the conservative dynamics of two-body systems — 6
 - 4 EOB description of radiation reaction and of the emitted waveform during inspiral — 15
 - 5 EOB description of the merger of binary black holes and of the ringdown of the final black hole — 20
 - 6 EOB vs NR — 23
 - 6.1 EOB[NR] waveforms vs NR ones — 23
 - 6.2 EOB[3PN] dynamics vs NR one — 26
 - 7 Other developments — 28
 - 7.1 EOB with spinning bodies — 28
 - 7.2 EOB with tidally deformed bodies — 29
 - 7.3 EOB and GSF — 29
 - 8 Conclusions — 31
- References — 31

Gerhard Schäfer

Hamiltonian dynamics of spinning compact binaries through high post-Newtonian approximations — 39

- 1 Introduction — 39
- 2 Hamiltonian formulation of general relativity — 40
 - 2.1 Point particles — 43
 - 2.2 Spinning particles — 44
 - 2.3 Introducing the Routhian — 45
- 3 The Poincaré algebra — 46
- 4 Post-Newtonian binary Hamiltonians — 47
 - 4.1 Spinless binaries — 47
 - 4.2 Spinning binaries — 50
- 5 Binary motion — 53
 - 5.1 Spinless two-body systems — 53
 - 5.2 Particle motion in Kerr geometry — 57

5.3 Two-body systems with spinning components — 61

References — 62

Yi Xie and Sergei Kopeikin

Covariant theory of the post-Newtonian equations of motion of extended bodies — 65

- 1 Introduction — 65
- 2 A theory of gravity for post-Newtonian celestial mechanics — 71
 - 2.1 The field equations — 72
 - 2.2 The energy–momentum tensor — 73
- 3 Parameterized post-Newtonian celestial mechanics — 74
 - 3.1 External and internal problems of motion — 75
 - 3.2 Solving the field equations by post-Newtonian approximations — 77
 - 3.3 The post-Newtonian field equations — 81
 - 3.4 Conformal harmonic gauge — 84
- 4 Parameterized post-Newtonian coordinates — 85
 - 4.1 The global post-Newtonian coordinates — 86
 - 4.2 The local post-Newtonian coordinates — 90
- 5 Post-Newtonian coordinate transformations by asymptotic matching — 100
 - 5.1 General structure of the transformation — 100
 - 5.2 Matching solution — 105
- 6 Post-Newtonian equations of motion of extended bodies in local coordinates — 110
 - 6.1 Microscopic post-Newtonian equations of motion — 110
 - 6.2 Post-Newtonian mass of an extended body — 111
 - 6.3 Post-Newtonian center of mass and linear momentum of an extended body — 113
 - 6.4 Translational equation of motion in the local coordinates — 115
- 7 Post-Newtonian equations of motion of extended bodies in global coordinates — 118
 - 7.1 STF expansions of the external gravitational potentials in terms of the internal multipoles — 118
 - 7.2 Translational equations of motion — 123
- 8 Covariant equations of translational motion of extended bodies — 135
 - 8.1 Effective background manifold — 135
 - 8.2 Geodesic motion and 4-force — 137
 - 8.3 Four-dimensional form of multipole moments — 139
 - 8.4 Covariant translational equations of motion — 142
 - 8.5 Comparison with Dixon’s translational equations of motion — 147
- References — 147

Michael Soffel

On the DSX-framework — 155

1	Introduction — 155
2	The post-Newtonian formalism — 159
2.1	The general form of the metric — 159
3	Field equations and the gauge problem — 163
4	The gravitational field of a body — 166
4.1	Post-Newtonian multipole moments — 166
5	Geodesic motion in the PN-Schwarzschild field — 169
6	Astronomical reference frames — 174
6.1	Transformation between global and local systems: first results — 174
6.2	Split of local potentials, multipole moments — 177
6.3	Tetrad induced local coordinates — 179
6.4	The standard transformation between global and local coordinates — 180
6.5	The description of tidal forces — 183
7	The gravitational N -body problem — 186
7.1	Local evolution equations — 186
7.2	The translational motion — 188
8	Further developments — 190
	References — 191

Pavel Korobkov and Sergei Kopeikin

General relativistic theory of light propagation in multipolar gravitational fields — 195

1	Introduction — 195
1.1	Statement of the problem — 195
1.2	Historical background — 199
1.3	Notations and conventions — 202
2	The metric tensor, gauges and coordinates — 206
2.1	The canonical form of the metric tensor perturbation — 206
2.2	The harmonic coordinates — 209
2.3	The ADM coordinates — 211
3	Equations of propagation of electromagnetic signals — 213
3.1	Maxwell equations in curved spacetime — 213
3.2	Maxwell equations in the geometric optics approximation — 214
3.3	Electromagnetic eikonal and light-ray geodesics — 215
3.4	Polarization of light and the Stokes parameters — 226
4	Mathematical technique for analytic integration of light-ray equations — 236
4.1	Monopole and dipole light-ray integrals — 236

4.2	Light-ray integrals from quadrupole and higher order multipoles —	238
5	Gravitational perturbations of the light ray —	242
5.1	Relativistic perturbation of the electromagnetic eikonal —	242
5.2	Relativistic perturbation of the coordinate velocity of light —	245
5.3	Perturbation of the light-ray trajectory —	247
6	Observable relativistic effects —	251
6.1	Gravitational time delay of light —	251
6.2	Gravitational deflection of light —	253
6.3	Gravitational shift of frequency —	257
6.4	Gravity-induced rotation of the plane of polarization of light —	263
7	Light propagation through the field of gravitational lens —	267
7.1	Small parameters and asymptotic expansions —	268
7.2	Asymptotic expressions for observable effects —	271
8	Light propagation through the field of plane gravitational waves —	273
8.1	Plane-wave asymptotic expansions —	273
8.2	Asymptotic expressions for observable effects —	276
	References —	278

Toshifumi Futamase

On the backreaction problem in cosmology — 283

1	Introduction —	283
2	Formulation and averaging —	285
3	Calculation in the Newtonian gauge —	287
4	Definition of the background —	289
5	Conclusions —	292
	References —	293

Alexander Petrov and Sergei Kopeikin

Post-Newtonian approximations in cosmology — 295

1	Introduction —	295
2	Derivatives on the geometric manifold —	305
2.1	Variational derivative —	305
2.2	Lie derivative —	308
3	Lagrangian and field variables —	309
3.1	Action functional —	310
3.2	Lagrangian of the ideal fluid —	311
3.3	Lagrangian of scalar field —	313
3.4	Lagrangian of a localized astronomical system —	315
4	Background manifold —	315
4.1	Hubble flow —	315

4.2	Friedmann–Lemître–Robertson–Walker metric —	316
4.3	Christoffel symbols and covariant derivatives —	319
4.4	Riemann tensor —	321
4.5	The Friedmann equations —	322
4.6	Hydrodynamic equations of the ideal fluid —	324
4.7	Scalar field equations —	324
4.8	Equations of motion of matter of the localized astronomical system —	325
5	Lagrangian perturbations of FLRW manifold —	327
5.1	The concept of perturbations —	327
5.2	The perturbative expansion of the Lagrangian —	330
5.3	The background field equations —	332
5.4	The Lagrangian equations for gravitational field perturbations —	332
5.5	The Lagrangian equations for dark matter perturbations —	336
5.6	The Lagrangian equations for dark energy perturbations —	337
5.7	Linearized post-Newtonian equations for field variables —	338
6	Gauge-invariant scalars and field equations in 1+3 threading formalism —	342
6.1	Threading decomposition of the metric perturbations —	342
6.2	Gauge transformation of the field variables —	344
6.3	Gauge-invariant scalars —	346
6.4	Field equations for the scalar perturbations —	348
6.5	Field equations for vector perturbations —	352
6.6	Field equations for tensor perturbations —	353
6.7	Residual gauge freedom —	353
7	Post-Newtonian field equations in a spatially flat universe —	355
7.1	Cosmological parameters and scalar field potential —	355
7.2	Conformal cosmological perturbations —	357
7.3	Post-Newtonian field equations in conformal spacetime —	360
7.4	Residual gauge freedom in the conformal spacetime —	365
8	Decoupled system of the post-Newtonian field equations —	366
8.1	The universe governed by dark matter and cosmological constant —	366
8.2	The universe governed by dark energy —	371
8.3	Post-Newtonian potentials in the linearized Hubble approximation —	372
8.4	Lorentz invariance of retarded potentials —	380
8.5	Retarded solution of the sound-wave equation —	383
	References —	386
