

# Contents

<b>1</b>	<b>Introduction — 1</b>
<b>2</b>	<b>Ordered vector spaces and vector lattices — 4</b>
2.1	Ordered vector spaces and positive operators — 4
2.2	Vector lattices — 6
2.3	Ordered normed spaces — 11
2.4	Normed Riesz spaces and Banach lattices — 12
2.5	Representation of Banach lattices — 16
<b>3</b>	<b>Finite, totally finite and selfmajorizing elements — 18</b>
3.1	Finite and totally finite elements in vector lattices — 18
3.2	Finite elements in Banach lattices — 29
3.3	Finite elements in sublattices and in direct sums of Banach lattices — 33
3.3.1	Finite elements in sublattices — 33
3.3.2	Finite elements in the bidual of Banach lattices — 37
3.3.3	Finite elements in direct sums of Banach lattices — 39
3.4	Selfmajorizing elements in vector lattices — 41
3.4.1	The order ideal of all selfmajorizing elements in a vector lattice — 42
3.4.2	General properties of selfmajorizing elements — 44
3.4.3	Examples of selfmajorizing elements — 47
3.5	Finite elements in $\ell$ -algebras and in product algebras — 49
3.5.1	Lattice ordered algebras — 49
3.5.2	Finite elements in unitary $\ell$ -algebras — 52
3.5.3	Finite elements in nonunitary $f$ -algebras — 57
3.5.4	Finite elements in product algebras — 63
<b>4</b>	<b>Finite elements in vector lattices of linear operators — 69</b>
4.1	Some general results — 70
4.2	Finiteness of regular operators on $AL$ -spaces — 75
4.3	Finite rank operators in the vector lattice of regular operators — 77
4.4	Some vector lattices and Banach lattices of operators — 81
4.4.1	Vector lattices of operators — 83
4.4.2	Banach lattices of operators — 84
4.5	Operators as finite elements — 90
4.6	Finite rank operators as finite elements — 92
4.7	Impact of the order structure of $\mathcal{V}(E, F)$ on the lattice properties of $E$ and $F$ — 96

<b>5</b>	<b>The space of maximal ideals of a vector lattice — 100</b>
5.1	Representation of vector lattices by means of extended real continuous functions — 100
5.2	Maximal ideals and discrete functionals — 103
5.3	The topology on the space of maximal ideals of a vector lattice — 107
5.4	The Hausdorff property of $\mathfrak{M}$ — 109
<b>6</b>	<b>Topological characterization of finite elements — 115</b>
6.1	Topological characterization of finite, totally finite and selfmajorizing elements — 115
6.1.1	The canonical map and the conditional representation — 116
6.1.2	Topological characterization of finite elements — 121
6.1.3	Topological characterization of totally finite elements — 125
6.1.4	Topological characterization of selfmajorizing elements — 129
6.2	Relations between the ideals of finite, totally finite and selfmajorizing elements — 131
6.3	The topological space $\mathfrak{M}$ for vector lattices of type $(\Sigma)$ — 134
6.4	Examples — 138
<b>7</b>	<b>Representations of vector lattices and their properties — 144</b>
7.1	A classification of representations and the standard map — 144
7.2	Vector lattices of type $(\Sigma)$ and their representations — 148
<b>8</b>	<b>Vector lattices of continuous functions with finite elements — 157</b>
8.1	Vector lattices of continuous functions with many finite functions — 157
8.2	Finite elements in vector lattices of continuous functions — 162
8.3	An isomorphism result for vector lattices of continuous functions — 167
<b>9</b>	<b>Representations of vector lattices by means of continuous functions — 171</b>
9.1	Representations which contain finite functions — 171
9.2	The existence of $\Phi\alpha$ -representations for vector lattices of type $(\Sigma)$ — 177
9.3	$LF$ -vector lattices — 182
9.4	Vector lattices of type $(C_M)$ — 184
<b>10</b>	<b>Representations of vector lattices by means of bases of finite elements — 191</b>
10.1	Bases of finite elements and $\alpha$ -representations — 191

10.2	Representations by means of $R$ -bases of finite elements —	195
10.3	Some properties of the realization space —	199
List of Examples — 207		
List of Symbols — 209		
Bibliography — 211		
Index — 217
