

Contents

1	Introduction	1
1.1	Introduction	1
1.2	Mining: The Historical Perspective	2
1.3	River Sand Mining: Environmental Issues	3
1.4	Sand: Ecological Values and Uses	3
1.5	Origin of Sand	5
1.6	Scope of the Present Study	5
	References	7
2	Rivers-Structure and Functions	9
2.1	Introduction	9
2.2	The River Ecosystem	11
2.3	Geological Work of Rivers	13
2.4	River Sediments and Channel Processes	15
2.5	River Classification	16
2.6	Concepts in Riverine Studies	18
2.6.1	River Continuum Concept	18
2.6.2	Nutrient Spiraling Concept	18
2.6.3	Flood Pulse Concept	19
2.7	Human Interventions	19
	References	21
3	River Sand Mining and Mining Methods	23
3.1	Introduction	23
3.2	Types of Alluvial Sand Extraction	24
3.2.1	Instream Mining	24
3.2.2	Floodplain Mining	26
3.2.3	Terrace Mining	26
3.3	Methods of Sand Extraction	27
3.3.1	Active Channels	27
3.3.2	Floodplains and Terraces	29
3.4	Manual and Mechanical Mining	29
	References	29

4	Impacts of River Sand Mining	31
4.1	Introduction	31
4.2	Changes in Bed Forms	32
4.3	Changes in Sediment Characteristics	35
4.4	Changes in Water Quality and Quantity	38
4.5	Changes in Biological Environment	41
4.6	Changes in Socioeconomic Environment	46
4.7	Vegetation Effects	50
4.8	Damage to Infrastructure Facilities	50
4.9	Flood Plain Pits Capturing	50
4.10	Impacts of River Sand Mining on Coastal Marine Environment	53
	References	54
5	Sand Mining: The World Scenario	57
5.1	Introduction	57
5.2	Arizona and California	57
5.3	Italy	60
5.4	Kenya	60
5.5	Jamaica and Costa Rica	63
5.6	Malaysia	64
5.7	China	65
5.8	Sri Lanka	66
5.9	Nepal	67
5.10	Maldives	67
5.11	India	68
5.12	Summary	75
	References	77
6	Environmental Case Studies from SW India	81
6.1	Introduction	81
6.2	Manimala River	85
6.2.1	Instream Sand Mining	87
6.2.2	Floodplain Sand Mining	87
6.2.3	Channel Incision	88
6.3	Periyar River	89
6.3.1	Sand Mining from Periyar River	90
6.3.2	Channel Incision	94
6.4	Drivers of Change	96
6.5	Environmental Implications of Sand Mining	101
	References	104

7	EIA of River Sand Mining	107
7.1	Introduction	107
7.2	Environmental Impact Assessment	108
7.3	General Methodologies of EIA: An Overview	109
7.3.1	Ad hoc Method	109
7.3.2	Checklist Method	109
7.3.3	Matrix Method	110
7.3.4	Networks	110
7.3.5	Overlays	110
7.3.6	Simulation and Modeling Workshop	110
7.3.7	Rapid Impact Assessment Matrix	111
7.4	Methodology Adopted	111
7.5	EIA of Sand and Gravel Mining	112
7.5.1	Impact Assessment Using Matrix Method	112
7.5.2	Rapid Impact Assessment Matrix	113
7.5.3	Physical and Chemical Components	118
7.5.4	Biological Components	119
7.5.5	Social Components	120
7.6	Discussion	121
	References	122
8	Mining Strategies and Management	125
8.1	Introduction	125
8.2	Environmental Laws Pertaining to Sand Mining	127
8.3	Purpose of the Guidelines	130
8.4	A Framework for Action	131
8.5	The Importance of Channel Maintenance Processes	131
8.6	Management Options and Extraction Control Measures	132
8.7	Restoration and River Management	133
8.8	Management Plan	133
8.8.1	Instream Mining	135
8.8.2	Floodplain Mining	135
8.9	General Guidelines	136
	References	137
9	River Sand Auditing: An Example from SW India	139
9.1	Introduction	139
9.2	River Sand Auditing	140
9.3	Methodology	140
9.3.1	Resource Estimation	140
9.3.2	Resource Allocation	141
9.3.3	Performance Evaluation/Sand Resource Accounting	142
9.3.4	Estimation of Unauthorized Sand Mining: An Example	143
	References	145

10	Sand: The Fine Aggregate	147
10.1	Introduction	147
10.2	Sand: The Fine Aggregate	148
10.3	Usefulness of Aggregates	150
10.4	Aggregates for Constructions	151
10.5	Fine Aggregate for Making Concrete	151
10.5.1	Sand for Mortars and Plasters	152
10.5.2	Sand for Filling	152
10.6	Storing and Handling of Aggregates	152
10.7	Aggregate Resource Protection	153
