

Contents

Preface	vii
Angelo Marcello Anile In Memoriam	xi
Contents	xv
List of Contributors	xxiii
Introduction	1
Janne Roos	
Part I Computational Electromagnetics	
Introduction to Part I	5
Gabriela Ciuprina	
Challenges and Approaches in EMC Modeling of Wireless Consumer Devices	9
Sergey Yuferev	
A New Adaptive Approach to Modeling Measured Multi-Port Scattering Parameters	21
Sanda Lefteriu and Athanasios C. Antoulas	
Parametric Models of Transmission Lines Based on First Order Sensitivities	29
Alexandra Stefanescu, Daniel Ioan, and Gabriela Ciuprina	
Domain Partitioning Based Parametric Models for Passive On-Chip Components	37
Gabriela Ciuprina, Daniel Ioan, Diana Mihalache, and Ehrenfried Seebacher	

A Novel Graphical Based Tool for Extraction of Magnetic Reluctances Between On-Chip Current Loops	45
Alexander Vasenev, Sebastián Gim, Alexandra Stefanescu, Sebastian Kula, and Diana Mihalache	
A Robust Technique for Modelling Nonlinear Lumped Elements Spanning Multiple Cells in FDTD	53
Luis R.J. Costa, Keijo Nikoskinen, and Martti Valtonen	
Computation of Eigenmodes in Periodic Structures with Dispersive Materials	61
Bastian Bandlow and Rolf Schuhmann	
Region-Oriented BEM Formulation for Numerical Computations of Electric Fields	69
Andreas Blaszczyk	
Surface Integrated Field Equations Method to Solve 3D Electromagnetic Problems	77
Zhifeng Sheng, Patrick Dewilde, and Rob Remis	
Reduced Basis Method for Electromagnetic Field Computations	85
Jan Pomplun and Frank Schmidt	
Using Nudg++ to Solve Poisson's Equation on Unstructured Grids	93
Christian Rüdiger Bahls, Gisela Pöplau, and Ursula van Rienen	
Magnetic Force Calculations Applied to Magnetic Force Microscopy	101
Thomas Preisner and Wolfgang Mathis	
Relativistic High Order Particle Treatment for Electromagnetic Particle-In-Cell Simulations	109
Martin Quandt, Claus-Dieter Munz, and Rudolf Schneider	
A Statistical Characterization of Resonant Electromagnetic Interactions with Thin Wires: Variance and Kurtosis Analysis	117
O.O. Sy, M.C. van Beurden, B.L. Michielsen, J.A.H.M. Vaessen, and A.G. Tijhuis	
Part II Circuit Simulation	
Introduction to Part II	127
Janne Roos	
Wavelets in Circuit Simulation	131
Emira Dautbegovic	

On Local Handling of Inner Equations in Compact Models	143
Uwe Feldmann, Masataka Miyake, Takahiro Kajiwara, and Mitiko Miura-Mattausch	
Hybrid Analysis of Nonlinear Time-Varying Circuits Providing DAEs with Index at Most One	151
Satoru Iwata, Mizuyo Takamatsu, and Caren Tischendorf	
Transient Analysis of Nonlinear Circuits Based on Waves	159
Carlos Christoffersen	
Simultaneous Step-Size and Path Control for Efficient Transient Noise Analysis	167
Werner Römisch, Thorsten Sickenberger, and Renate Winkler	
Nonlinear Distortion in Differential Circuits with Single-Ended and Balanced Drive	175
Timo Rahkonen	
Evaluation of Oscillator Phase and Frequency Transfer Functions	183
M.M. Gourary, S.G. Rusakov, S.L. Ulyanov, M.M. Zharov, and B.J. Mulvaney	
Polynomial Chaos for the Computation of Failure Probabilities in Periodic Problems	191
Roland Pulch	
Quasiperiodic Steady-State Analysis of Electronic Circuits by a Spline Basis	199
Hans Georg Brachtendorf, Angelika Bunse-Gerstner, Barbara Lang, Siegmar Lampe, and Ashish Awasthi	
Accurate Simulation of the Devil's Staircase of an Injection-Locked Frequency Divider	207
Tao Xu and Marissa Condon	
ANN/DNN-Based Behavioral Modeling of RF/Microwave Components and Circuits	215
Q.J. Zhang and Lei Zhang	
Surrogate Modeling of Low Noise Amplifiers Based on Transistor Level Simulations	225
Luciano De Tommasi, Dirk Gorissen, Jeroen Croon, and Tom Dhaene	
Computational Statistics Approach to Capacitance Sensitivity Analysis and Gate Delay Time Minimization of TFT-LCDs	233
Yiming Li and Hsuan-Ming Huang	

Lookup-Table Based Settling Error Modeling in SIMULINK	241
Marko Neitola and Timo Rahkonen	
Speed-Up Techniques for Time-Domain System Simulations	249
Timo Rahkonen	
Part III Coupled Problems	
Introduction to Part III	259
Wil Schilders	
Heating of Semiconductor Devices in Electric Circuits	261
Markus Brunk and Ansgar Jüngel	
Analysis of a PDE Thermal Element Model for Electrothermal Circuit Simulation	273
Giuseppe Ali, Andreas Bartel, Massimiliano Culpò, and Carlo de Falco	
Automatic Thermal Network Extraction and Multiscale Electro-Thermal Simulation	281
Massimiliano Culpò, Carlo de Falco, Georg Denk, and Steffen Voigtmann	
Simulations of an Electron-Phonon Hydrodynamical Model Based on the Maximum Entropy Principle	289
V. Romano and C. Scordia	
Consistent Initialization for Coupled Circuit-Device Simulation	297
Sascha Baumanns, Monica Selva Soto, and Caren Tischendorf	
Hyperbolic PDAEs for Semiconductor Devices Coupled with Circuits	305
Giuseppe Ali, Giovanni Mascali, and Roland Pulch	
Large-Scale Atomistic Circuit-Device Coupled Simulation of Discrete-Dopant-Induced Characteristic Fluctuation in Nano-CMOS Digital Circuits	313
Yiming Li and Chih-Hong Hwang	
Evaluation of Electromagnetic Coupling Between Microelectronic Device Structures Using Computational Electrodynamics	321
Wim Schoenmaker, Peter Meuris, Walter Pflanzl, and Alexander Steinmair	
Evaluation of Domain Decomposition Approach for Compact Simulation of On-Chip Coupled Problems	333
Jagoda Plata, Michal Dobrzynski, and Sebastián Gim	
DAE-Index and Convergence Analysis of Lumped Electric Circuits Refined by 3-D Magnetoquasistatic Conductor Models	341
Sebastian Schöps, Andreas Bartel, Herbert De Gersem, and Michael Günther	

Part IV Mathematical and Computational Methods

Introduction to Part IV	351
Vittorio Romano	
Numerical Time Integration in Quasistatic Computational Electromagnetics	355
Galina Benderskaya, Wolfgang Ackermann, Oliver Sterz, and Thomas Weiland	
A Novel Staggered Finite Volume Time Domain Method	367
Thomas Lau, Erion Gjonaj, and Thomas Weiland	
EM Scattering Calculations Using Potentials	375
Magnus Herberthson	
New Trends in the Preconditioning of Integral Equations of Electromagnetism	383
David P. Levadoux, Florence Millot, and Sébastien Pernet	
Simulation of Large Interconnect Structures Using ILU-Type Preconditioner	395
D. Harutyunyan, W. Schoenmaker, and W.H.A. Schilders	
High-Order Discontinuous Galerkin Methods for Computational Electromagnetics and Uncertainty Quantification	403
J.S. Hesthaven, T. Warburton, C. Chauviere, and L. Wilcox	
Efficient Simulation of Large-scale Dynamical Systems Using Tensor Decompositions	413
F. van Belzen and S. Weiland	
Robust FETI Solvers for Multiscale Elliptic PDEs	421
Clemens Pechstein and Robert Scheichl	
Nonlinear Models for Silicon Semiconductors	429
Salvatore La Rosa, Giovanni Mascali, and Vittorio Romano	
Multiobjective Optimization Applied to Design of PIFA Antennas	437
Stefan Jakobsson, Björn Andersson, and Fredrik Edelvik	
Exploiting Model Hierarchy in Semiconductor Design Using Manifold Mapping	445
D.J.P. Lahaye and C.R. Drago	
Solving Inverse Problems by Space Mapping with Inverse Difference Method	453
Murat Şimsek and N. Serap Şengör	

Part V Model-Order Reduction

Introduction to Part V	463
E. Jan W. ter Maten	
Advances in Balancing-Related Model Reduction for Circuit Simulation	469
Peter Benner	
Passivity-Preserving Balanced Truncation Model Reduction of Circuit Equations	483
Tatjana Stykel and Timo Reis	
A New Approach to Passivity Preserving Model Reduction: The Dominant Spectral Zero Method	491
Roxana Ionutiu, Joost Rommes, and Athanasios C. Antoulas	
Applications of Eigenvalue Counting and Inclusion Theorems in Model Order Reduction	499
E. Fatih Yetkin and Hasan Dağ	
GABOR: Global-Approximation-Based Order Reduction	507
Janne Roos, Mikko Honkala, and Pekka Miettinen	
Model Order Reduction for Systems with Non-Rational Transfer Function Arising in Computational Electromagnetics	515
Lihong Feng and Peter Benner	
Model Order and Terminal Reduction Approaches via Matrix Decomposition and Low Rank Approximation	523
Peter Benner and André Schneider	
Stability and Passivity of the Super Node Algorithm for EM Modeling of IC's	531
M.V. Ugryumova and W.H.A. Schilders	
Hierarchical Model-Order Reduction Flow	539
Mikko Honkala, Pekka Miettinen, Janne Roos, and Carsten Neff	
Partitioning-Based RL-In-RL-Out MOR Method	547
Pekka Miettinen, Mikko Honkala, and Janne Roos	
Reduction of Large Resistor Networks	555
Joost Rommes, Peter Lenaers, and Wil H.A. Schilders	
Nonlinear Model Order Reduction Based on Trajectory Piecewise Linear Approach: Comparing Different Linear Cores	563
Kasra Mohaghegh, Michael Striebel, E. Jan W. ter Maten, and Roland Pulch	

Model Order Reduction for Nonlinear IC Models with POD	571
Arie Verhoeven, Michael Striebel, and E. Jan W. ter Maten	
On Model Order Reduction of Perturbed Nonlinear Neural Networks with Feedback	579
Marissa Condon and Georgi G. Grahovski	
Author Index	587
