Contents

Preface *IX*

1	**The Earth's Energy Budget and Climate Change**	*1*
1.1	Introduction	*1*
1.2	Radiative Heating of the Atmosphere	*2*
1.3	Global Energy Budget	*3*
1.4	The Window-Gray Approximation and the Greenhouse Effect	*6*
1.5	Climate Sensitivity and Climate Feedbacks	*8*
1.6	Radiative Time Constant	*12*
1.7	Composition of the Earth's Atmosphere	*14*
1.8	Radiation and the Earth's Mean Temperature Profile	*19*
1.9	The Spatial Distribution of Radiative Heating and Circulation	*32*
1.10	Summary and Outlook	*35*
	References	*39*
2	**Radiation and Its Sources**	*41*
2.1	Light as an Electromagnetic Wave	*41*
2.2	Radiation from an Oscillating Dipole, Radiance, and Radiative Flux	*42*
2.3	Radiometry	*47*
2.4	Blackbody Radiation: Light as a Photon	*50*
2.5	Incident Sunlight	*57*
	References	*63*
3	**Transfer of Radiation in the Earth's Atmosphere**	*65*
3.1	Cross Sections	*65*
3.2	Scattering Cross Section and Scattering Phase Function	*68*
3.3	Elementary Principles of Light Scattering	*71*
3.4	Equation of Radiative Transfer	*77*
3.5	Radiative Transfer Equations for Solar and Terrestrial Radiation	*80*
	References	*82*

4	**Solutions to the Equation of Radiative Transfer**	*85*
4.1	Introduction	*85*
4.2	Formal Solution to the Equation of Radiative Transfer	*86*
4.3	Solution for Thermal Emission	*88*
4.4	Infrared Fluxes and Heating Rates	*93*
4.5	Formal Solution for Scattering and Absorption	*102*
4.6	Single Scattering Approximation	*103*
4.7	Fourier Decomposition of the Radiative Transfer Equation	*110*
4.8	The Legendre Series Representation and the Eddington Approximation	*112*
4.9	Adding Layers in the Eddington Approximation	*121*
4.10	Adding a Surface with a Nonzero Albedo in the Eddington Approximation	*123*
4.11	Clouds in the Thermal Infrared	*124*
4.12	*Optional* Separation of Direct and Diffuse Radiances	*126*
4.13	*Optional* Separating the Diffusely Scattered Light from the Direct Beam in the Eddington and Two-Stream Approximations	*127*
4.14	*Optional* The δ-Eddington Approximation	*130*
4.15	*Optional* The Discrete Ordinate Method and DISORT	*135*
4.16	*Optional* Adding-Doubling Method	*138*
4.17	*Optional* Monte Carlo Simulations	*140*
	References	*146*
5	**Treatment of Molecular Absorption in the Atmosphere**	*149*
5.1	Spectrally Averaged Transmissions	*149*
5.2	Molecular Absorption Spectra	*151*
5.3	Positions and Strengths of Absorption Lines within Vibration-Rotation Bands	*155*
5.4	Shapes of Absorption Lines	*159*
5.5	Doppler Broadening and the Voigt Line Shape	*162*
5.6	Average Absorptivity for a Single, Weak Absorption Line	*163*
5.7	Average Absorptivity for a Single, Strong, Pressure-Broadened Absorption Line	*164*
5.8	Treatment of Inhomogeneous Atmospheric Paths	*166*
5.9	Average Transmissivities for Bands of Nonoverlapping Absorption Lines	*169*
5.10	Approximate Treatments of Average Transmissivities for Overlapping Lines	*171*
5.11	Exponential Sum-Fit and Correlated k-Distribution Methods	*177*
5.12	Treatment of Overlapping Molecular Absorption Bands	*182*
	References	*184*
6	**Absorption of Solar Radiation by the Earth's Atmosphere and Surface**	*185*
6.1	Introduction	*185*

6.2 Absorption of UV and Visible Sunlight by Ozone *186*
6.3 Absorption of Sunlight by Water Vapor *191*
References *201*

7 Simplified Estimates of Emission *203*
7.1 Introduction *203*
7.2 Emission in the 15 μm Band of CO_2 *203*
7.3 Change in Emitted Flux due to Doubling of CO_2 *209*
7.4 Changes in Stratospheric Emission and Temperature Caused by a Doubling of CO_2 *213*
7.5 Afterthoughts *215*
References *217*

Appendix A Useful Physical and Geophysical Constants *219*

Appendix B Solving Differential Equations *221*
B.1 Simple Integration *221*
B.2 Integration Factor *221*
B.3 Second Order Differential Equations *223*

Appendix C Integrals of the Planck Function *225*

Appendix D Random Model Summations of Absorption Line Parameters for the Infrared Bands of Carbon Dioxide *227*
Reference *229*

Appendix E Ultraviolet and Visible Absorption Cross Sections of Ozone *231*
References *231*

Index *233*
