Preface — v

1	Some background on Lie algebras — 1
1.1	Basic definitions on Lie algebras — 1
1.2	Subalgebras and ideals — 2
1.3	Lie homomorphism — 3
1.4	Representations and modules — 3
1.5	Simple Lie algebras — 4
1.6	Direct sum and semidirect sum — 5
1.7	Universal enveloping algebras — 6
2	The higher genus algebras — 8
2.1	Riemann surfaces — 8
2.2	Meromorphic forms — 9
2.3	Associative structure — 12
2.4	Lie and Poisson algebra structure — 12
2.5	The vector field algebra and the Lie derivative — 14
2.6	The algebra of differential operators — 15
2.7	Differential operators of all degrees — 16
2.8	Lie superalgebras of half forms — 17
2.8.1	Lie superalgebras — 17
2.8.2	Jordan superalgebras — 19
2.9	Higher genus current algebras — 20
2.10	The generalized Krichever–Novikov situation — 21
2.10.1	The global holomorphic situation — 21
2.10.2	The one-point case — 22
2.10.3	The generalized Krichever–Novikov algebras — 22
2.11	The classical situation — 22
2.11.1	The vector field algebra – the Witt algebra — 25
2.11.2	The function algebra — 26
2.11.3	The differential operator algebra — 26
2.11.4	The Lie superalgebra — 26
2.11.5	Current algebras — 27
3	The almost-grading — 28
3.1	Definition of an almost-graded structure — 29
3.2	Separating cycle and Krichever–Novikov pairing — 30
3.3	The homogeneous subspaces — 31
3.4	The almost-graded structure for the introduced algebras — 34

3.5	Triangular decomposition and filtrations —	38
3.6	Equivalence of filtrations and almost-gradings —	40
3.7	Inverted grading —	41
3.8	The one-point situation —	41
3.9	Level lines —	42
3.10	Delta-distribution —	46
4	Fixing the basis elements —	49
4.1	The Riemann–Roch theorem —	49
4.1.1	The language of divisors —	49
4.1.2	Divisors and line bundles —	50
4.1.3	The theorem —	51
4.2	Choice of a basis for the generic case —	57
4.2.1	Axiomatic characterisation —	57
4.2.2	Realizing all splittings —	63
4.3	The remaining cases —	65
4.3.1	Genus greater or equal to two —	66
4.3.2	Genus one —	69
5	Explicit expressions for a system of generators —	70
5.1	The construction via rational functions in the $g = 0$ case —	72
5.2	The construction via theta functions and prime forms in the case $g \geq 1$ (general case) —	73
5.3	The construction via theta functions and prime forms in the case $g \geq 1$ (exceptional cases) —	80
5.4	Half-integer weights —	82
5.5	The construction via the Weierstraß σ -function in the $g = 1$ case —	84
6	Central extensions of Krichever–Novikov type algebras —	87
6.1	Lie algebra cohomology —	87
6.2	Central extensions and 2-cocycles —	89
6.3	Projective actions and central extensions —	93
6.4	Projective and affine connections —	95
6.4.1	The definitions —	96
6.4.2	Proof of existence of an affine connection —	97
6.5	Geometric cocycles —	99
6.5.1	Geometric cocycles for function algebra —	102
6.5.2	Geometric cocycles for vector field algebra —	103
6.5.3	Geometric cocycles for the differential operator algebra —	106
6.5.4	Special integration curves —	109
6.5.5	Geometric cocycles for the current algebra $\bar{g}$ —	110
6.6	Uniqueness and classification of central extensions —	111

6.7	The classical situation —	119
6.8	Proofs for the classification results —	122
6.8.1	The function algebra —	123
6.8.2	Vector field algebra —	129
6.8.3	Mixing cocycle for the differential operator algebra —	137
6.9	Central extensions – the supercase —	142
6.9.1	Proof of Theorem 6.91 —	148
6.9.2	The case of an odd central element —	149
6.9.3	Examples —	150
6.10	General cohomology of Krichever–Novikov algebras —	151
6.10.1	Universal central extension —	152
6.10.2	The full $H^2(\mathcal{L}, \mathbb{C})$ —	154
6.10.3	Some remarks on the continuous cohomology $H_{\text{cont}}^*(\mathcal{L}, \mathbb{C})$ —	155
7	Semi-infinite wedge forms and fermionic Fock space representations —	157
7.1	The infinite matrix algebra $\widehat{gl}(\infty)$ —	158
7.1.1	The algebra and its central extension —	158
7.1.2	Semi-infinite wedge representation for $\widehat{gl}(\infty)$ —	162
7.2	Semi-infinite wedge forms of Krichever–Novikov type elements —	168
7.2.1	Action of differential operators of all degrees —	174
7.2.2	Fine structure of the representation space —	175
7.3	Highest weight representations and Verma modules —	179
7.3.1	Highest weight representations —	179
7.3.2	Verma modules —	181
7.4	Some remarks on the Heisenberg algebra representations —	184
7.5	Left semi-infinite forms —	186
8	$b - c$ systems —	189
8.1	The Clifford algebra like structure —	189
8.2	Operator valued fields in conformal field theory —	194
8.3	$b - c$ fields —	199
8.4	Energy-momentum tensor —	200
8.5	Representation of the Heisenberg algebra via $b - c$ systems —	207
8.6	$b - c$ systems and the algebra $\widehat{gl}(\infty)$ —	209
9	Affine algebras —	212
9.1	Higher genus current algebras —	212
9.2	Central extensions —	213
9.3	Local cocycles —	214
9.4	$\mathcal{L}$ -invariant cocycles —	217
9.5	Current algebras of reductive Lie algebras —	218

9.6	Classification results — 221
9.6.1	Cocycles for the simple case — 222
9.6.2	Cocycles for the semisimple case — 223
9.6.3	Cocycles for the abelian case — 224
9.7	Algebras of $\bar{g}$ -valued differential operators — 226
9.7.1	$\bar{g}$ -valued differential operators — 226
9.7.2	Cocycles — 227
9.7.3	The classification result for reductive Lie algebras — 229
9.7.4	The proof — 230
9.8	Examples: $\mathfrak{sl}(n)$ and $\mathfrak{gl}(n)$ — 234
9.8.1	$\mathfrak{sl}(n)$ — 234
9.8.2	$\mathfrak{gl}(n)$ — 235
9.9	Verma modules — 236
9.10	Fermionic representations — 241
10	The Sugawara construction — 247
10.1	The classical Sugawara construction — 247
10.2	General Sugawara construction — 249
10.2.1	The reductive case — 256
10.2.2	Almost-graded structure — 258
10.3	Verma module representations — 259
10.4	The proofs — 261
10.4.1	Proof of Proposition 10.24 — 264
10.4.2	Proof of Proposition 10.10 — 269
10.4.3	The case $K > 1$ — 274
11	Wess–Zumino–Novikov–Witten models and Knizhnik–Zamolodchikov connection — 275
11.1	Moduli space of curves with marked points — 276
11.2	Tangent spaces of the moduli spaces and the Krichever–Novikov vector field algebra — 281
11.3	Sheaf versions of the Krichever–Novikov type algebras — 284
11.4	The Knizhnik–Zamolodchikov connection — 289
11.4.1	Variation of the complex structure — 289
11.4.2	Defining the connection — 294
11.4.3	Knizhnik–Zamolodchikov equations — 297
11.4.4	Example $g = 0$ — 298
11.4.5	Example $g = 1$ — 300
12	Degenerations and deformations — 303
12.1	Deformations of Lie algebras — 304
12.2	Definition of a general deformation of a Lie algebra — 308

12.3	The geometric families in the case of the torus —	309
12.3.1	Complex tori —	309
12.3.2	The family of elliptic curves —	310
12.4	Basis for the meromorphic forms —	313
12.5	Families of algebras —	314
12.5.1	Function algebras —	314
12.5.2	Vector field algebras —	315
12.5.3	The current algebra —	317
12.6	The geometric background of the degenerated cases —	318
12.7	Algebras appearing in the degenerate cases —	320
12.7.1	Witt algebra case —	320
12.7.2	The genus zero and three-point situation —	320
12.7.3	Subalgebras of the classical algebras —	322
13	Lax operator algebras —	324
13.1	Lax operator algebras —	324
13.2	The geometric meaning of the Tyurin parameters —	329
13.3	Module structure of Lax operator algebras —	331
13.3.1	Structure over $\mathcal{A}$ —	331
13.3.2	Structure over $\mathcal{L}$ —	331
13.3.3	Structure over $\mathcal{D}^1$ and the algebra $\mathcal{D}_g^1$ —	333
13.4	Almost-graded central extensions of Lax operator algebras —	334
14	Some related developments —	340
14.1	Vertex algebras —	340
14.2	Other geometric algebras —	341
14.3	Discretized and q -deformed Krichever–Novikov type algebras —	341
14.4	Genus zero multi-point algebras – integrable systems —	342
14.5	Related works in theoretical physics —	342
Bibliography —		345
