

## Contents

**Preface** *XI*

**Fundamental Constants and Frequently Used Numbers** *XV*

**Basic Notation** *XVII*

<b>1</b>	<b>The Mathematical Methods of Electrodynamics</b>	<b>1</b>
1.1	Vector and Tensor Algebra	1
1.1.1	The Definition of a Tensor and Tensor Operations	1
1.1.2	The Principal Values and Invariants of a Symmetric Tensor of Rank 2	8
1.1.3	Covariant and Contravariant Components	11
1.1.4	Tensors in Curvilinear and Nonorthogonal Systems of Coordinates	14
1.2	Vector and Tensor Calculus	18
1.2.1	Gradient and Directional Derivative. Vector Lines	19
1.2.2	Divergence and Curl. Integral Theorems	23
1.2.3	Solenoidal and Potential (Curl-less) Vectors	27
1.2.4	Differential Operations of Second Order	27
1.2.5	Differentiating in Curvilinear Coordinates	31
1.2.6	Orthogonal Curvilinear Coordinates	35
1.3	The Special Functions of Mathematical Physics	41
1.3.1	Cylindrical Functions	41
1.3.2	Spherical Functions and Legendre Polynomials	49
1.3.3	Dirac Delta Function	56
1.3.4	Certain Representations of the Delta Function	59
1.3.5	The Representation of the Delta Function through Loop Integrals in a Complex Plane	60
1.3.6	Expansion in Total Systems of Orthogonal and Normalized Functions. General Considerations	63
1.3.7	Fourier Series	66
1.3.8	Fourier Integral	68
1.4	Answers and Solutions	71
<b>2</b>	<b>Basic Concepts of Electrodynamics: The Maxwell Equations</b>	<b>91</b>
2.1	Electrostatics	91
2.1.1	The Coulomb Law	91

2.1.2	Electric Field	92
2.1.3	Energy and Forces in Electrostatic Fields	107
2.2	Magnetostatics	112
2.2.1	Current Density and the Magnetic Field. Biot–Savart Law	112
2.2.2	Lorentz Force and Ampère’s Formula	114
2.2.3	Conservation of Electric Charge and the Continuity Equation	114
2.2.4	Equations of Magnetostatics. Vector Potential	116
2.2.5	Energy and Forces in Magnetostatic Fields	124
2.3	Maxwell’s Equations. Free Electromagnetic Field	131
2.3.1	The Law of Electromagnetic Induction	131
2.3.2	The Systems of Measurement Units of Electric and Magnetic Values	135
2.3.3	An Analysis of the System of Maxwell’s Equations	136
2.3.4	Free Electromagnetic Field	141
2.3.5	The Partial Polarization of Waves	144
2.3.6	Analytical Signal	149
2.3.7	The Hamiltonian Form of Equations for a Free Electromagnetic Field	150
2.4	Answers and Solutions	154
<b>3</b>	<b>The Special Theory of Relativity and Relativistic Kinematics</b>	<b>193</b>
3.1	The Principle of Relativity and Lorentz Transformations	193
3.1.1	Properties of Space–Time and Intervals	193
3.1.2	Lorentz Transformations	198
3.1.3	Pseudo-Euclidean Geometry	202
3.2	Kinematics of Relativistic Particles	214
3.2.1	Energy and Momentum	214
3.2.2	Kinematic Problems	219
3.3	Answers and Solutions	233
<b>4</b>	<b>Fundamentals of Relativistic Mechanics and Field Theory</b>	<b>271</b>
4.1	Four-Dimensional Vectors and Tensors	271
4.1.1	Transformations of Tensors	271
4.1.2	Dual Tensors	276
4.2	The Motion of Charged Particles in Electromagnetic Fields. Transformation of the Electric Field	280
4.2.1	Interaction of Charged Particles with the Electromagnetic Field	280
4.2.2	Equations of Motion of a Relativistic Particle	282
4.2.3	Transformations of Electromagnetic Field Stress	288
4.2.4	Dynamics of Orbital and Spin Magnetic Moments	298
4.2.5	The Approximate Methods. Averaging over Rapid Movements	301
4.3	The Four-Dimensional Formulation of Electrodynamics. Introduction to Field Theory	313
4.3.1	Lagrangian and Hamiltonian Methods in Field Theory	313
4.3.2	The Action for an Electromagnetic Field	319
4.3.3	Noether’s Theorem and Integrals of Motion	322

4.4	Answers and Solutions	332
<b>5</b>	<b>Emission and Scattering of Electromagnetic Waves</b>	<b>395</b>
5.1	Green's Functions and Retarded Potentials	395
5.1.1	The Green's Function of a Wave Equation	396
5.1.2	Retarded Potentials	398
5.1.3	The Spectral Composition of Emission	400
5.2	Emission in Nonrelativistic Systems of Charges and Currents	404
5.2.1	Electric Dipole Emission	405
5.2.2	Quadrupole and Magnetic Dipole Emission	406
5.2.3	The Hertz Vector and Antenna Radiation	408
5.3	Emission by Relativistic Particles	416
5.3.1	The Electromagnetic Field of a Propagating Charged Particle	416
5.3.2	The Loss of Energy and Momentum of a Charged Particle	420
5.3.3	The Spectral Distribution of Radiation Emitted by Relativistic Particles	423
5.3.4	Radiation from Colliding Particles	425
5.3.5	Radiation from Particle Decays and Transformations	427
5.4	Interaction of Charged Particles with Radiation	436
5.4.1	Interaction of a Charged Particle with its Own Electromagnetic Field	436
5.4.2	Renormalization of Mass. The Radiation Damping Force in the Relativistic Case	438
5.4.3	Scattering of Electromagnetic Waves by Particles	443
5.5	Answers and Solutions	449
<b>6</b>	<b>Quantum Theory of Radiation Processes. Photon Emission and Scattering</b>	<b>513</b>
6.1	Quantum Theory of the Free Electromagnetic Field	513
6.1.1	Field Oscillators	513
6.1.2	Photons	514
6.1.3	Occupation Number Representation and Operators of the Electromagnetic Field	516
6.1.4	Coherent States	523
6.1.5	Representation of the Quantum States and the Operators in the Basis of Coherent States	526
6.1.6	Squeezed States	529
6.1.7	Entangled States	533
6.1.8	Beamsplitters	535
6.2	Quantum Theory of Photon Emission, Absorption, and Scattering by Atomic Systems	539
6.2.1	Interaction of the Quantized Electromagnetic Field with a Nonrelativistic System	540
6.2.2	Spontaneous and Stimulated Emission	541
6.2.3	Electric Dipole Radiation	545
6.2.4	Electric Quadrupole and Magnetic Dipole Radiation	546

6.2.5	Perturbation Theory for the Density Matrix	549
6.2.6	Long-Wavelength Dipole Approximation	552
6.3	Interaction between Relativistic Particles	560
6.3.1	The Relativistic Dirac Equation for Fermions	560
6.3.2	The Klein–Gordon–Fock Equation	563
6.3.3	The Analysis of the Dirac Equation	564
6.3.4	The Interaction Operator of a Relativistic Particle with Photons	573
6.3.5	Method of Equivalent Photons	577
6.4	Answers and Solutions	581
<b>7</b>	<b>Fundamentals of Quantum Theory of the Electron–Positron Field</b>	<b>631</b>
7.1	Covariant Form of the Dirac Equation. Relativistic Bispinor Transformation	631
7.2	Covariant Quadratic Forms	636
7.3	Charge Conjugation and Wave Functions of Antiparticles	639
7.4	Secondary Quantization of the Dirac Field. Creation and Annihilation Operators for Field Quanta	640
7.5	Energy and Current Density Operators for Dirac Particles	643
7.6	Interaction between Electron–Positron and Electromagnetic Fields	645
7.7	Schrödinger Equation for Interacting Fields and the Evolution Operator	647
7.8	Scattering Matrix and Its Calculation	649
7.9	Calculations of Probabilities and Effective Differential Cross-Sections	652
7.10	Scattering of a Relativistic Particle with a Spin in the Coulomb Field	653
7.11	Green’s Functions of Electron–Positron and Electromagnetic Fields	657
7.12	Interaction between Electrons and Muons	662
7.12.1	Electron–Muon Collisions	662
7.12.2	Conversion of an Electron–Positron Pair into a Muon Pair	666
7.13	Higher-Order Corrections	667
7.14	Answers and Solutions	669
<b>Appendix A Conversion of Electric and Magnetic Quantities between the International System of Units and the Gaussian System 675</b>		
<b>Appendix B Variation Principle for Continuous Systems 677</b>		
B.1	Vibrations of an Elastic Medium as the Vibration Limit of Discrete Point Masses	677
B.2	The Lagrangian Form of Equations of Motion for a Continuous Medium	680
<b>Appendix C General Outline of Quantum Theory 685</b>		
C.1	Spectrum of Physical Values and the Wave Function	685
C.2	State Vector	686
C.3	Indistinguishability of Identical Particles	687
C.4	Operators and Their Properties	688
C.5	Some Useful Formulas of Operator Algebra	698

C.6	Wave Functions of the Hydrogen-Like Atom (the Lowest Levels)	699
C.6.1	Addition of Angular Moments	700
C.6.2	Spin Operators and Wave Functions of Fermions ( $s = 1/2$ )	700
	<b>References</b>	703
	<b>Index</b>	709
