Preface — v

1	Elementary particles and fields — 1
1.1	Conventions and notations — 1
1.2	Particles and interactions — 2
1.3	Quantum electrodynamics — 9
1.4	Quantum chromodynamics — 13
1.5	Bethe–Salpeter equation — 16
1.6	Effective interactions — 18
1.6.1	Preliminaries — 18
1.6.2	The model NJL — 20
2	The standard model — 27
2.1	The electro-weak theory — 27
2.1.1	Feynman rules for the electro-weak interaction — 40
2.1.2	Higgs scalar search — 43
2.2	Status of the standard model — 44
2.3	Properties of nonrenormalizable equations, instructive example — 49
3	Bogoliubov compensation — 57
3.1	Origin of the approach — 57
3.2	Application to QFT — 58
3.3	A spontaneous generation of the Nambu–Jona-Lasinio interaction — 60
3.4	Justification of the model choice — 66
3.5	Compensation equation in a six-dimensional scalar model — 67
3.6	Bethe–Salpeter equation and zero excitation — 76
3.7	Compensation equation for scalar field mass — 77
3.8	Estimate of nonlinearity influence — 79
3.9	Conclusions of simple scalar model — 81
3.10	Appendix — 83
4	Three-gluon effective interaction — 86
4.1	Compensation equation — 86
4.2	Running coupling — 93
4.3	The gluon condensate — 97
4.4	The glueball — 99
4.5	Conclusion — 101

5	Nambu–Jona-Lasinio effective interaction — 102
5.1	Introduction — 102
5.2	Effective NJL interaction — 102
5.3	Scalar and pseudo-scalar states — 109
5.4	Spontaneous breaking of the chiral symmetry — 114
5.5	Pion mass and the quark condensate — 116
5.6	Numerical results and discussion — 119
5.7	Vector mesons — 125
5.7.1	Compensation equations for effective form-factors — 126
5.7.2	Wave functions of vector states — 132
5.7.3	Results and discussion — 138
5.8	Necessary formulae — 139
6	Three-boson interaction — 141
6.1	Compensation equation for anomalous three-boson interaction — 142
6.2	Effective strong interaction in the weak gauge sector — 151
6.3	Scalar bound state of two W-s — 153
6.4	Muon g-2 — 161
7	Possible four-fermion interaction of heavy quarks — 167
7.1	Four-fermion interaction of heavy quarks — 167
7.2	Doublet bound state $\bar{\Psi}_L T_R$ — 170
7.3	Stability problem — 174
7.4	Possible effects of the heavy quarks interaction — 176
8	Overall conclusion — 179
8.1	Short review of achievements of the compensation approach — 179
8.2	Examples of additional relations in the compensation approach — 186
8.3	Weinberg mixing angle and the fine structure constant — 196
8.4	Expectations — 201
8.5	A possible effective interaction in the general relativity — 204
8.6	Appendix — 209

Bibliography — 219

Index — 224
