

Contents

Preface

1	Developing driver assistance systems using a consistent and comprehensive simulation chain	1
	Thomas Neumayer, Manuel Schiller, Alois C. Knoll	
2	Continuous validation of driver assistance functions	10
	Tino Schulze, Karsten Krügel	
3	Software-in-the-loop tests for the new generation of driver assistance systems and active safety functions	24
	Benedikt Schonlau, Lars Rudolf, Piet Wenzel, Klaus Krumbiegel	
4	Development of a modular nonlinear automotive powertrain model – analysis and evaluation of a shift process of an automatic transmission with different model configurations.....	31
	Leonard Yousif, Ivan Rot, Julien Pillas, Frank Kirschbaum, Stephan Rinderknecht	
5	Model-based development and calibration of a sliding model position control for an AMT synchronization system	44
	Hua Huang, Clemens Gühmann	
6	Multi-platform simulation models for the development of transmission control software in commercial vehicles	56
	Julian King, Jochen Köhler, Michael Kübler	
7	Investigation into the assumptions for lumped capacitance modelling of turbocharger heat transfer	65
	Richard Burke, Colin Copeland, Tomasz Duda	
8	Model based torque control development approach.....	82
	Sebastian Vlsser, Olaf Erik Herrmann, Kazuhiro Higuchi	
9	Benchmark problem for near boundary operation control for automotive engine	101
	Satoru Watanabe, Akira Ohata	
10	Data-driven engine modeling for transient control and calibration optimization.....	111
	Chris Atkinson	

11	Evaluation of support vector machines as a design space description method in automotive applications.....	123
	Nataša Kieft, René Linsen, Thomas Bäck	
12	Efficient verification of OBD calibration by electrical manipulation of actuator and sensor signals using the TOPexpert ASM box.....	140
	Ralf Beck, Christian Wirtz, Lars Posdena, Matthias Kötter, Markus Netterscheid, Dennis Kortenoeven	
13	On-target bypassing within the model-based development process for efficient validation and verification.....	148
	Thomas Burger, Ralf Müller, Patrick Jäger, Marco Kunze	
14	Adapting semi-formal test case design techniques to E/E integration testing of distributed functions – application, benefits and limitations.....	157
	Ralf Benthin, Henning Jost	
15	The use of traffic simulation to examine penetration rates for road condition mapping.....	166
	Hans-Martin Kroll, Karsten Schmidt, Zahra Navidikashani, Mathias Baur, Boris Buschardt, Markus Lienkamp	
16	Multi-domain integration, simulation and testing using the functional mockup interface.....	179
	Ghizlane Tibba, Christoph Malz	
17	Safeguarding the development of real-time software on multicore systems from specification to integration.....	185
	Simon Schliecker, Kai Richter	
18	Yielding for a deeper system understanding based on low level microcontroller traces.....	189
	Karsten Schmidt, Denny Marx, Jens Harnisch, Albrecht Mayer	
19	Dynamic optimization of engine actuator set values using a metaheuristic algorithm.....	199
	Aleš Kolar, Johannes Luig	
20	Local Gaussian process regression for model-based calibration of engine control units	216
	Nils Tietze, Ulrich Konigorski, Duy Nguyen-Tuong	
21	Model-based calibration with data-driven simulation models for non-DoE experts.....	237
	Carsten Haukap, Berthold Barzantny, Karsten Röpke	
22	Compact hardware-in-the-loop simulation of the electric machine of an electric or hybrid vehicle	254
	Hendrik Gerth	

23	Model-based optimal control of a hybrid electric vehicle using stochastic dynamic programming	267
	Christopher Vagg, Chris Brace, Sam Akehurst, Lloyd Ash	
24	Interconnection of different simulation tools for an all-inclusive view on hybrid cars	276
	Andreas Schmidt, Hans-Christian Reuss, Michael Grimm	
25	Automated validation of transmission controls for over 200 vehicle variants	285
	Stephan Gloss, Milan Slezák, Jakob Mauss	
26	Analysis of timing and jitter in real and virtual test bench for automatic transmissions	290
	Jan Röper, Jörn Göres, Clemens Gühmann	
27	Rapid control prototyping for frontloaded in-vehicle testing of transmission control system algorithms by laptop	305
	Thomas Liebezeit, Uzmee Bazarsuren, Jörg Beilharz, André Mees, Roland Serway	
28	Real-time capable model of a PEM fuel cell system for automotive applications	316
	Raphael Hans, Ferdinand Panik, Hans-Christian Reuss	
29	HIL simulation of a rectifier with power factor correction	330
	Axel Kiffe, Thomas Schulte	
30	Simulation model for battery voltage prediction at EV and HEV	339
	Jaehoan Kim	
31	Test case independent automatic test evaluation by intelligent global test oracle with traceability to requirements	348
	Stefan Lachmann, Jens Lüdemann	
32	System-independent test automation, signal manipulation and evaluation	355
	Holger Jentsch, Volker Weck, Daniel Volquard, Wei Han	
33	Virtual hardware in-the-loop simulation for automotive systems development	361
	Victor Reyes	
34	Design and analysis of a controller from system design idea to autosar architecture with basic software modules	372
	Emad Farshizadeh, Hermann Briese, Steffen Beringer, Dominik Holler, Hamza Raja, Lars Stockmann	
35	VERA Virtual Execution Rapid AUTOSAR platform	386
	Sebastian Siegl, Maximilian Miegler	

36	Evaluation of components and control strategies in electric vehicles using a coupled thermal simulation.....	392
	Michael Dobmann	
37	Processes for energy-efficient operation of a refrigerant circuit	403
	Thomas Mayer, Uwe Waschatz, Mohamed Ayeb, Ludwig Brabetz	
38	Nonlinear dynamic modelling of vehicle air conditioning systems	409
	Eugen Wolf, Manuel Gräber, Mohamed Ayeb, Ludwig Brabetz	
	The Authors.	417
