Contents

Preface —— **v**
About the editors —— **xiii**
Abbreviations —— **xvii**

Part I Introduction and outlook

Holger Loewe
1 Introduction and outlook —— **3**

Part II Theoretical foundations

Ferenc Darvas and Dormán György
2 Fundamentals of Flow Chemistry —— **9**
2.1 Fundamentals of chemical reactions —— **9**
2.1.1 Thermodynamic requirements for reaction —— **9**
2.1.2 Kinetic requirements for a reaction —— **10**
2.1.3 Reaction order and kinetics —— **12**
2.1.4 Diffusion control —— **13**
2.1.5 Kinetic versus thermodynamic control —— **13**
2.1.6 Competing reactions —— **15**
2.1.7 Initiation and termination of chemical reactions —— **15**
2.1.8 Exotherm and endoterm reactions —— **16**
2.1.9 How to accelerate an organic chemical reaction. Shifting the equilibrium towards product formation —— **16**
2.2 Batch versus flow reactions —— **20**
2.2.1 Performing chemical reactions in batch and flow —— **23**
2.2.2 Multistep reactions in batch and flow —— **26**
2.2.3 The dimensions of batch (flask) and flow (micro) reactors —— **26**
2.2.4 Mixing in batch versus microreactors —— **27**
2.2.5 Mass transfer in batch and flow —— **28**
2.2.6 Temperature control in batch and flow —— **29**
2.2.7 Heterogeneous catalytic reactions in batch and flow —— **32**
2.3 Introduction to the basics of microfluidics —— **34**
2.3.1 Electroosmotic (electrokinetic) flow (EOF) —— **34**
2.3.2 Hydrodynamic (pressure-driven) pumping —— **36**
2.3.3 Segmented flow —— **37**
2.3.4 Centrifugal pumping —— **38**
2.3.5 Laminar and turbulent flow regimes, the Reynolds number —— **38**
2.3.6 Axial dispersion versus radial dispersion (Bodenstein and Peclet Numbers) —— **41**
2.3.7 Mixing versus reaction rate–Damköhler Number —— **41**
2.3.8 Heat transfer in flow —— **42**
2.3.9 Flow rates in microreactors —— **43**

Bibliografische Informationen
http://d-nb.info/1054143374

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.4 Microreactors in general — 44
2.4.1 General properties of flow reactors — 44
2.4.2 Major flow reactor configurations — 47
2.5 Essentials of reaction planning and realization in continuous flow — 49
2.5.1 Classification of chemical reactions based on reaction kinetics — 49
2.5.2 Flash chemistry — 50
2.5.3 High-resolution reaction time control — 51
2.5.4 Novel process windows — 52
2.5.5 Process intensification — 55

Jun-ichi Yoshida
3 Principles of controlling reactions in flow chemistry — 59
3.1 Introduction — 59
3.2 Reactions in a flow microreactor — 59
3.2.1 Reaction time in a batch reactor — 59
3.2.2 Residence time control in a flow reactor — 60
3.2.3 Why micro? — 62
3.3 High-resolution reaction time control of reactions in flow — 68
3.3.1 The principle — 68
3.3.2 Example 1: Phenyllthiums bearing alkoxycarbonyl groups — 70
3.3.3 Temperature–residence time map — 72
3.3.4 Example 2: Control of isomerization. Aryllithiums bearing a nitro group — 76
3.4 Space integration of reactions — 77
3.4.1 The concept — 77
3.4.2 Example 3: Synthesis of disubstituted benzenes from dibromobenzene — 78
3.4.3 Example 4: Synthesis of TAC-101 — 79
3.4.4 Linear integration and convergent integration — 80
3.4.5 Example 5: Synthesis of unsymmetrically-substituted photochromic diarylethenes. Convergent integration — 81
3.4.6 Example 6: Integration of lithiation and cross-coupling — 82
3.4.7 Example 7: Anionic polymerization of styrene and synthesis of block copolymers with a silicon core — 85
3.4.8 Example 8: Anionic block copolymerization of styrene and methyl methacrylate — 88
3.5 Summary — 89

Melinda Fekete and Toma Glasnov
4 Technology overview/Overview of the devices — 95
4.1 General aspects — 95
4.2 Pumps for liquid handling — 96

4.2.1 Syringe pump — **96**
4.2.2 Piston pump — **97**
4.2.3 Other pumps — **98**
4.3 Mass-flow controllers — **99**
4.4 Heating/cooling of the reaction zone — **99**
4.5 Back-pressure regulators — **100**
4.6 Mixers — **101**
4.6.1 Modular mixers — **102**
4.6.2 In-line mixers — **103**
4.7 Reactors — **105**
4.7.1 Coil reactors — **106**
4.7.2 Chip reactors — **108**
4.7.3 Packed-bed or fixed-bed reactors — **109**
4.8 Miscellaneous techniques — **112**
4.8.1 Tube-in-tube reactor — **112**
4.8.2 Segmented flow biphasic reactions — **113**
4.8.3 Falling film reactors — **116**
4.8.4 Flow microwave reactors — **117**
4.8.5 UV reactors — **118**
4.8.6 Working with supercritical CO_2 — **119**
4.9 Assembling and using a flow reactor — **120**
4.10 Commercially available systems for the laboratory use — **123**

Patrick Plouffe, Arturo Macchi, and Dominique M. Roberge
5 From batch to continuous chemical synthesis – a toolbox approach — 141
5.1 Chemical process development and scale-up challenges — **141**
5.1.1 Batch synthesis: Current profile of the pharmaceutical and fine-chemical industry — **141**
5.1.2 Flow chemistry and microreactor technology: a viable alternative? — **142**
5.1.3 Modularized process intensification – use the right tool at the right place — **143**
5.2 Reaction categories based on rate — **146**
5.2.1 Type A reactions — **146**
5.2.2 Type B reactions — **146**
5.2.3 Type C reactions — **147**
5.3 Reacting phases — **147**
5.3.1 Single phase systems – mix-then-reside — **147**
5.3.2 Liquid-liquid systems – mix-and-reside versus active mixing — **148**
5.3.3 Gas-liquid systems – use of pressure — **150**
5.3.4 Liquid-solid systems — **150**
5.4 Summary — **150**

Part III Lab and teaching practise

Pieter Nieuwland, Kaspar Koch, René Becker, Sándor B. Ötvös, István M. Mándity, and Ferenc Fülöp

6 Experimental procedures for conducting organic reactions in continuous flow — 157

6.1 Flow chemistry calculations — **157**
6.1.1 Reaction and microreactor temperature — **157**
6.1.2 Determination of flow rates — **157**
6.1.3 Example calculation — **158**
6.2 Wittig reaction in a continuous-flow microreactor — **159**
6.2.1 Continuous-flow design — **159**
6.2.2 Basic experiment — **160**
6.2.3 Optimization experiment — **161**
6.3 Swern–Moffatt oxidation in a continuous-flow microreactor — **163**
6.3.1 Continuous-flow design — **163**
6.3.2 Basic experiment — **164**
6.3.3 Optimization experiment — **166**
6.3.4 Optimization experiment on a different substrate — **167**
6.4 Synthesis of silver nanoparticles in a continuous-flow microreactor — **168**
6.4.1 Continuous-flow design — **169**
6.4.2 Basic experiment — **169**
6.4.3 Optimization experiment — **172**
6.5 1,2,3-triazole synthesis in continuous flow with copper powder and additives — **172**
6.5.1 Continuous-flow design — **173**
6.5.2 Basic experiment — **174**
6.5.3 Optimization experiment — **174**
6.6 Heterogeneous catalytic deuteration with D_2O in continuous flow — **176**
6.6.1 Continuous-flow design — **176**
6.6.2 Basic experiment — **177**
6.6.3 Optimization experiment — **178**
6.7 Aldol reaction in a continuous-flow microreactor — **178**
6.7.1 Continuous-flow design — **179**
6.7.2 Basic aldol experiment — **179**
6.7.3 Aldol reaction optimization — **180**
6.8 Prilezhaev epoxidation in a continuous-flow microreactor — **181**
6.8.1 Continuous-flow design — **181**
6.8.2 Basic epoxidation experiment — **182**
6.9 Peptide catalyzed stereoselective reactions in a continuous-flow reactor — **184**
6.9.1 Continuous-flow design — **186**

6.9.2 Basic aldol experiment — **186**
6.9.3 Reaction optimization — **187**

Robert K. Harmel, Marielle M. E. Delville, and Floris P. J. T. Rutjes
7 Experimental procedures for conducting organic reactions in continuous flow — 191
7.1 Pyrrole synthesis by Paal–Knorr cyclocondensation — **192**
7.1.1 Background — **192**
7.1.2 The flow process — **193**
7.1.3 Experimental procedures — **195**
7.2 Diels–Alder Reactions in flow chemistry — **196**
7.2.1 Background — **196**
7.2.2 The flow process — **196**
7.2.3 Experimental procedures — **199**
7.3 Copper-catalyzed azide-alkyne cycloaddition in flow using inductive heating — **200**
7.3.1 Background — **200**
7.3.2 The flow process — **202**
7.3.3 Experimental procedures — **203**
7.4 Nef Oxidation of nitroalkanes with KMnO — **204**
7.4.1 Background — **204**
7.4.2 The flow process — **204**
7.4.3 Experimental procedures — **206**
7.5 Suzuki–Miyaura cross-coupling with palladium-catalysts generated in flow — **207**
7.5.1 Background — **207**
7.5.2 The flow process — **208**
7.5.3 Experimental procedures — **210**
7.6 Oxidative amidation of aromatic aldehydes — **211**
7.6.1 Background — **211**
7.6.2 The flow process — **212**
7.6.3 Experimental procedures — **213**
7.7 Azide synthesis in flow via diazotransfer — **215**
7.7.1 Background — **215**
7.7.2 The flow process — **216**
7.7.3 Experimental procedures — **217**
7.8 Boronic acid/ester synthesis via lithium halogen exchange in a Cryo-Flow Reactor — **219**
7.8.1 Background — **219**
7.8.2 The flow process — **219**
7.8.3 Experimental procedures — **222**
7.9 The Ritter Reaction in Continuous Flow — **223**
7.9.1 Background — **223**

7.9.2 The flow process — **224**
7.9.3 Experimental procedures — **225**
7.10 Vilsmeier–Haack formylation of electron-rich arenes — **226**
7.10.1 Background — **226**
7.10.2 The flow process — **227**
7.10.3 Experimental procedures — **230**
7.11 Appel reaction using monolithic triphenylphosphine in flow — **230**
7.11.1 Background — **230**
7.11.2 The flow process — **232**
7.11.3 Experimental procedures — **234**
7.12 Schenck ene reaction in flow using singlet oxygen — **235**
7.12.1 Background — **235**
7.12.2 The flow process — **236**
7.12.3 Experimental procedure — **239**
7.13 Chemoenzymatic flow synthesis of cyanohydrins — **241**
7.13.1 Background — **241**
7.13.2 The flow process — **242**
7.13.3 Experimental procedures — **243**
7.14 Summary — **244**

C. Oliver Kappe
8 The Microwave-to-flow paradigm: translating batch microwave chemistry to continuous-flow processes — 251
8.1 Microwave chemistry — **251**
8.2 Converting microwave to flow chemistry — **252**
8.3 Summary — **257**

Nicholas E. Leadbeater, Trevor A. Hamlin
9 Incorporation of continuous-flow processing into the undergraduate teaching laboratory: key concepts and two case studies — 259
9.1 Introduction — **259**
9.2 Equipment — **260**
9.3 Experiments developed for the undergraduate teaching laboratory — **262**
9.4 Development of two new experiments for the undergraduate laboratory — **262**
9.4.1 The Biginelli Reaction — **264**
9.4.2 The Claisen–Schmidt Reaction — **269**
9.5 Summary — **273**
9.6 Acknowledgements — **273**

Answers to the study questions — 277
Index — 291
