Preface — v

- 1 The atom's structure I: Electrons and shells — 1**
 - 1.1 The philosophy of atoms — 1
 - 1.2 The inner structure of the atom — 5
 - 1.3 The shell and the nucleus — 7
 - 1.4 Quantum mechanics — 18
 - 1.5 Mathematical explanations of the BOHR atom model — 24
 - 1.6 Outlook — 32

- 2 The atom's structure II: Nucleons and nucleus — 37**
 - 2.1 The neutron — 37
 - 2.2 Nuclide notations and isotopes — 39
 - 2.3 Conventional parameters of the nucleus — 42
 - 2.4 Mass vs. energy of the nucleus: the mass defect — 52
 - 2.5 Outlook — 56

- 3 Nucleons: Binding energies and shell structures — 59**
 - 3.1 Stable nuclides and the Chart of Nuclides — 59
 - 3.2 Mass, mass defect, nucleon binding energy — 63
 - 3.3 The liquid drop model — 68
 - 3.4 The nuclear shell model — 79
 - 3.5 Outlook — 93

- 4 From stable to unstable nuclides — 97**
 - 4.1 Unstable nuclei and the Chart of Nuclides — 97
 - 4.2 Unstable nuclides on earth — 104
 - 4.3 Outlook — 107

- 5 From stable to unstable nuclides: Mathematics — 109**
 - 5.1 Transformation parameters — 109
 - 5.2 Correlations between radioactivity, number of unstable nuclides and masses — 116
 - 5.3 Units of radioactivity — 124
 - 5.4 Classes of radioactive transformations — 129
 - 5.5 Outlook — 148

- 6 Processes of transformations: Overview — 149**
 - 6.1 Transformation processes overview — 149
 - 6.2 Primary transformation pathways — 154

6.3	Energetic — 158
6.4	β-transformation processes ($\Delta A = 0$) — 161
6.5	Cluster emission and spontaneous fission processes ($\Delta A \neq 0$) — 171
6.6	Successive and simultaneous transformations — 174
6.7	Secondary transitions — 176
6.8	Outlook — 180
7	β-transformations I: Elementary particles — 183
7.1	Elementary particles — 183
7.2	Quarks — 188
7.3	Elementary particles relevant to β-transformations — 190
7.4	Quantum theory of β-transformation phenomena — 200
7.5	Outlook — 205
8	β-transformations II: β^--process, β^+-process and electron capture — 207
8.1	Phenomenology — 207
8.2	Energetics of β-transformations — 209
8.3	Kinetic energetics of β-transformation products — 214
8.4	Velocities of β-transformations — 223
8.5	Selection rules — 227
8.6	Excited states — 235
8.7	Examples and applications — 237
8.8	Outlook — 243
9	α-emission — 247
9.1	Introduction — 247
9.2	Mass balances in α-transformations — 249
9.3	Pathways of α-emission — 251
9.4	Energetics — 254
9.5	Velocities of α-transformation — 262
9.6	Quantum mechanics of α-transformation phenomena — 264
9.7	Excited states — 269
9.8	Examples of applications — 272
9.9	Outlook — 277
10	Spontaneous fission — 283
10.1	Introduction — 283
10.2	Occurrence of spontaneous fission — 284
10.3	Pathways of fission — 288
10.4	Energetics — 301
10.5	Velocities of spontaneous fission — 303

10.6	Follow-up processes of initial fission —	306
10.7	Examples of applications —	310
10.8	Outlook —	311
11	Secondary and post-processes of transformations —	315
11.1	From primary to secondary transformations —	315
11.2	Photon emission —	320
11.3	Conversion electrons —	334
11.4	Pair formation —	339
11.5	Energies and velocities —	340
11.6	Examples of applications of photon emissions —	345
11.7	Outlook —	348
12	Post-processes of primary and secondary transformations —	351
12.1	Post-processes paralleling primary and secondary nuclear transformations —	351
12.2	Post-processes due to the positron —	354
12.3	Vacancies of shell electrons —	362
12.4	Examples of applications of post-effects —	372
12.5	Outlook —	375
13	Nuclear reactions —	379
13.1	Artificially produced radionuclides —	379
13.2	General mechanism of nuclear reactions —	382
13.3	Energetics —	389
13.4	Yields of nuclear reaction products —	394
13.5	Radionuclide production using neutrons —	411
13.6	Radionuclide production using charged particles —	420
13.7	Outlook —	428
14	Appendix —	437
Index —		453
