

Table of Contents

Preface — v

1 Introduction: Envisioning Semantic Information Spaces — 1

Part A Propaedeutics – Organizing, Representing, and Exploring Knowledge

2 Indexing and Knowledge Organization — 15

2.1 Knowledge Organization Systems as Indexing Languages — 15

2.1.1 Building Elements: Entities and Terms — 16

2.1.2 Structural Elements: Intrasystem Relations — 21

2.1.3 Result Elements: Indexates — 27

2.2 Standards and Frameworks — 30

2.2.1 ISO 25964: Thesauri and Interoperability with other
Vocabularies — 30

2.2.2 Functional Requirements for Subject Authority Data (FRSAD) — 31

3 Semantic Technologies for Knowledge Representation — 33

3.1 Web-based Representation Languages — 33

3.1.1 XML — 34

3.1.2 RDF/RDFS — 37

3.1.3 OWL — 42

3.2 Application-based Representation Languages — 49

3.2.1 XTM — 50

3.2.2 SKOS — 57

4 Information Retrieval and Knowledge Exploration — 61

4.1 Information Retrieval Essentials — 61

4.1.1 Exact Match Paradigm — 62

4.1.2 Partial Match Paradigm — 64

4.2 Measuring Effectiveness in Information Retrieval — 65

4.3 From Retrieving to Exploring — 68

4.3.1 String-based Retrieval Processes — 71

4.3.2 Conceptual Retrieval Process — 73

4.3.3 Conceptual Exploration Processes — 74

4.3.4 Topical Exploration Processes — 78

4.4 From Homogeneous to Heterogeneous Information Spaces — 80

Part B Status quo – Handling Heterogeneity in Indexing and Retrieval

| | |
|----------|--|
| 5 | Approaches to Handle Heterogeneity — 87 |
| 5.1 | Citation Pearl Growing — 87 |
| 5.2 | Modeling Multilingual Indexing Languages — 89 |
| 5.3 | Establishing Semantic Interoperability between Indexing Languages — 90 |
| 5.3.1 | Structural Models — 91 |
| 5.3.2 | Mapping Levels — 93 |
| 5.3.3 | Vocabulary Linking Projects — 96 |
| 6 | Problems with Establishing Semantic Interoperability — 105 |
| 6.1 | Conceptual Interoperability between Entities of Indexing Languages — 107 |
| 6.1.1 | Focused and Comprehensive Mapping — 108 |
| 6.1.2 | Conceptual Identity and Semantic Congruence — 112 |
| 6.2 | Equivalent Intersystem Relationships — 118 |
| 6.2.1 | Intersystem Relations Compared to Intrasytem Relations — 119 |
| 6.2.2 | Interoperability and Search Tactics — 121 |
| 6.2.3 | Specified Intersystem Relationships — 132 |
| 6.2.4 | Conceptual Interoperability between Indexing Results — 134 |
| 6.2.5 | Directedness of Intersystem Relationships — 137 |

Part C Vision – Ontology-based Indexing and Retrieval

| | |
|----------|---|
| 7 | Formalization in Indexing Languages — 147 |
| 7.1 | Introduction and Objectives — 147 |
| 7.2 | Common Characteristics and Differences between Indexing Languages and Formal Knowledge Representation — 151 |
| 7.3 | Prerequisites for an Ontology-based Indexing — 156 |
| 7.3.1 | Semantic Relations and Inferred Document Sets — 158 |
| 7.3.2 | Facets and Inferences — 167 |
| 8 | Typification of Semantic Relations — 181 |
| 8.1 | Inventories of Typed relations — 182 |
| 8.2 | Typed Relations and their Benefit for Indexing and Retrieval — 188 |
| 8.3 | Examples of the Benefit of Typed Relations for the Retrieval Process — 194 |

| | | |
|-----------|--|------------|
| 8.3.1 | Example 1: Aspect-oriented Specification of the Generic Hierarchy Relation — | 194 |
| 8.3.2 | Example 2: Typed Relations of a Topic Map built from the ASIST Thesaurus — | 197 |
| 8.3.3 | Example 3: Degrees of Determinacy — | 213 |
| 9 | Inferences in Retrieval Processes — | 215 |
| 9.1 | Inferences of Level 1 — | 216 |
| 9.1.1 | Hierarchical Relationships — | 216 |
| 9.1.2 | Associative Relationships — | 217 |
| 9.1.3 | Typification of the Synonymy / Equivalence Relationship — | 218 |
| 9.2 | Inferences of Level 2 and of Higher Levels, Transitivity — | 222 |
| 9.2.1 | Hierarchical Relationships — | 223 |
| 9.2.2 | Unspecific Associative Relationships — | 226 |
| 9.2.3 | Typification of Associative Relationships — | 229 |
| 9.3 | Inferences by Combining Different Types of Relationships — | 231 |
| 9.3.1 | Synonymy Relation with Hierarchical Relationships — | 231 |
| 9.3.2 | Chronological Relation with Hierarchical Relationships — | 232 |
| 9.3.3 | Transitions from Associative Relationships to a Hierarchical Structure — | 232 |
| 9.3.4 | Transitions from a Hierarchical Structure to Associative Relationships — | 233 |
| 9.3.5 | Transitivity for Combinations of Typed Associative Relationships — | 235 |
| 10 | Semantic Interoperability and Inferences — | 237 |
| 10.1 | Conditions for Entity-based Interoperability — | 237 |
| 10.2 | Models of Semantic Interoperability — | 244 |
| 10.2.1 | Ontological Spine and Satellite Ontologies — | 244 |
| 10.2.2 | Degrees of Determinacy and Interoperability — | 250 |
| 10.2.3 | Entity-based Interoperability and Facets — | 252 |
| 10.3 | Perspective: Ontology-based Indexing and Retrieval — | 254 |
| 11 | Remaining Research Questions — | 259 |
| 11.1 | Questions of Modeling — | 259 |
| 11.2 | Questions of Procedure — | 260 |
| 11.3 | Questions of Technology and Implementation — | 262 |

Part D Appendices

Systematic Glossary — 265

Abbreviations — 271

List of figures — 273

List of tables — 277

References — 279

Index — 289
