Contributors' CVs XIII

Foreword XXIII

List of Acronyms XXV

List of Units XXXVII

1 Introduction 1

Sergio Bertolucci

Part I Knowledge Management and Technology Transfer in an Organization 3

2 Knowledge Management: From Theory to Practice 5

Beatrice Bressan and Daan Boom

2.1 Knowledge-Based and Innovative Organization 5

2.2 The Theory of Knowledge 7

2.2.1 Tacit and Explicit Knowledge 8

2.2.2 The SECI Model and the Knowledge Creation Spiral 9

2.2.3 The Two Dimensions and the Two Spirals of Knowledge Creation 11

2.2.4 The Five Conditions and the Five Phases in Two Dimensions 13

2.3 The Core Processes of Managing Knowledge 18

2.3.1 Knowledge Outputs and Outcomes 19

2.4 The Knowledge Worker 31

2.4.1 The Individual Learning Process 33

2.4.2 Scientific, Technological and Social Processes 36

2.4.3 Concept Formation and the Hierarchical Levels of Conceptualization 37

2.5 The Knowledge Creation, Acquisition, and Transfer Model 39

2.6 Knowledge Management: A Case Study of CERN 41

2.6.1 The LHC Case Study Survey 47

Part II Examples of Knowledge and Technology Transfer 57**Section 1 Medical Applications 59****3 Particle Beams for Cancer 61***Ugo Amaldi***3.1 Radiations in the Therapy of Solid Tumours 61****3.2 Conventional Radiation Therapy 66****3.3 Neutrontherapy and Protontherapy 68****3.4 Ion Therapy 72****3.5 Proton Single-Room Facilities 78****3.6 Conclusion 83****4 Detection and Imaging 85***David W. Townsend***4.1 Invention of the Multiwire Proportional Chamber 85****4.2 Modalities for Medical Imaging 87****4.3 Development of the HIDAC Detector 87****4.4 The Dual-HIDAC PET Camera 89****4.5 Early Developments in Positron Tomography 90****4.6 Fully Three-Dimensional PET Acquisition 91****4.7 The Partial Ring Tomograph 94****4.8 The Birth of Multimodality Instrumentation 95****4.9 Conclusion 97****5 Micro-Fabricated Sensors 99***Cinzia Da Via***5.1 3D Silicon Sensors 99****5.1.1 3D Sensor Fabrication 100****5.1.2 3D Silicon Sensors, State of the Art 106****5.2 3D Sensor Applications 109****5.2.1 Micro-Dosimetry for Cancer Therapy 110****5.2.2 Structural Molecular Biology 111****5.2.3 Scattering from Crystals 113****Section 2 Impact on Life Sciences 119****6 Omics: Technologies and Translations 121***Martin Kussmann***6.1 Biology from Different Perspectives 123****6.1.1 Biology from a Descriptive Discipline to a Holistic, Molecular, and Quantitative Science 123****6.1.2 Biology from a Chain-of-Events Perspective to Network Thinking 124****6.2 Quantum Leaps in Omics Development 125**

6.2.1	From Gene and DNA Analysis to Deep Sequencing	126
6.2.1.1	Single Gene Expression Analysis: Real-Time PCR	127
6.2.1.2	Microarrays-Based Transcriptomics	127
6.2.1.3	Deep Sequencing	130
6.2.2	Classical Biochemistry Goes -Omics	131
6.2.2.1	Proteomics	132
6.2.2.2	Metabolites	133
6.2.2.3	Metabolomics	134
6.3	Omics Output (I): Knowledge Bases	135
6.3.1	Human Genome Projects	136
6.3.2	Human Proteome Projects	137
6.3.3	Human Metabolome Projects	139
6.4	Omics Output (II): Translations and Challenges	141
6.4.1	Genetics to Diagnostics	142
6.4.2	Proteomics to Diagnostics	146
6.5	From Omics to 'Know-mics': Translation into Personal and Actionable (gen)omics	149
7	Technology Fallout in Bioinformatics	153
	<i>Paolo Zanella</i>	
7.1	Fundamental Research and the Development of New Technology	154
7.2	Technology Transfer from Public Research to Private Companies	155
7.3	Innovation Power of ICT in a Digital World	156
7.4	CERN, Six Decades of Progress Surfing the Digital Waves	157
7.5	Accelerators, Detectors and Computers	159
7.6	CERN: Development of Accelerators and Detectors	160
7.7	The Evolution of Central Computer Systems	162
7.8	Computers Help Physicists to Think Big: Big Data and Discoveries	164
7.9	Other Examples of Technology Transfer to Industry and Applied Research	166
7.10	Technology Transfer from CERN to Other Sciences and Society	167
7.11	The EBI at the EMBL	170
7.12	The New Biology as an Information Science	171
7.13	The Transfer of Technology from EBI to Industry	173
7.14	Bioinformatics as a Strategic Resource in Europe: From SIB to ELIXIR	174
7.15	From Particles to Genomes	175
7.16	1000 Genomes and the SardinIA Project	176
8	Understanding the Brain: Organizational and Scientific Challenges	179
	<i>Henry Markram</i>	
8.1	The Computing Revolution in Neuroscience	180
8.2	New Computing Technologies	182

- 8.3** **Better Understanding, Diagnosis and Treatment of Brain Disease** *187*
- 8.4** **New Modes of Translation for Neuroscience Research** *189*

Section 3 Towards Early Diagnostics *191*

- 9** **Online Environments for Research and Care in Neurodegenerative Diseases** *193*
 Giovanni B. Frisoni
- 9.1 Alzheimer's and Neurodegenerative Diseases: Diagnostic Issues and Imaging Biomarkers for Early Diagnosis *194*
- 9.2 NeuGRID for Computer-Assisted Extraction of Imaging Biomarkers *196*
- 9.3 Algorithms for Diagnostic Biomarker Extraction in Individual Patients *201*
- 9.4 NeuGRID for the Development of Innovative Biomarkers for Drug Development *204*
- 9.5 Increasing Societal Emergency *209*
- 10** **Data Management Challenges in Paediatric Information Systems** *211*
 Richard McClatchey
- 10.1 Background *211*
- 10.2 Related Work in Data Management for Paediatrics *215*
- 10.3 Specific Requirements for Paediatric Data Management *217*
- 10.4 The HeC Integrated Data Model *221*
- 10.4.1 HeC Integrated Data Model: Data *223*
- 10.4.2 HeC Integrated Data Model: Metadata *225*
- 10.4.3 HeC Integrated Data Model: Semantics *226*
- 10.5 Ontologies in Paediatric Data Management *227*
- 10.5.1 Ontologies and Data Integration *228*
- 10.5.2 Semantics Support for DSS *230*
- 10.5.3 Semantic Query Enhancement and Optimization Using an Ontology *230*
- 10.6 Future Perspectives *231*
- 11** **Health Surveillance** *233*
 David Manset
- 11.1 Grid Computing and the Inception of Clouds *235*
- 11.1.1 The gLiteAMGA Metadata Catalogue *236*
- 11.2 GINSENG, the French Online Health Surveillance Platform *239*
- 11.2.1 Architecture of a Nascent Big Data Warehouse *241*
- 11.2.2 Data Analytics *243*
- 11.3 Conclusions and Outlook *245*

Part III Economic Aspects of Knowledge Management and Technology Transfer 247

- 12 Innovation and Big Data 249
Edwin Morley-Fletcher
- 12.1 The Wealth of Nations: Agriculture, the Division of Labour, or Profits? 250
- 12.2 Industrialization and/or Exploitation 251
- 12.3 Perfect Competition, the Disappearance of Profits, Economies of Scale 252
- 12.4 Creative Destruction 253
- 12.5 Risk and Uncertainty 255
- 12.6 Accumulation Without Innovation 256
- 12.7 The Real Engine of Economic Growth 257
- 12.8 Endogenous Technological Change 258
- 12.9 The Appropriate Set of Market and Non-Market Institutions 259
- 12.10 Limitless Knowledge 261
- 12.11 Post-Scarcity and Networks 262
- 12.12 Intellectual Property Rights 264
- 12.13 Governments' Support of Scientific Research 265
- 12.14 The Remaining Scarce Resource is Human Creativity 266
- 12.15 Different Organizational Modes for Overcoming Uncertainty 267
- 12.16 Information and Allocation Gains of Peer Production 268
- 12.17 An Ecosystem of Technologies Leading to the Singularity? 270
- 12.18 Big Data Analytics and Data-Intensive Healthcare 271
- 13 Universities and Corporations: The Case of Switzerland 275
Spyros Arvanitis and Martin Woerter
- 13.1 Background 275
- 13.2 KTT Activities in the Swiss Economy: The Main Facts from the *Firm's* Point of View 281
 - 13.2.1 Forms and Partners of KTT Activities 282
 - 13.2.2 Technological Fields of KTT-Active and R&D-Active Firms 287
 - 13.2.3 Mediating Institutions and Motives for KTT Activities 288
 - 13.2.4 Impact of KTT Activities as Assessed by the Firms 290
 - 13.2.5 Obstacles to KTT Activities 292
- 13.3 KTT Activities in the Swiss Economy: The Main Facts from the *Science Institution* Point of View 296
 - 13.3.1 Incidence and Forms of KTT Activities 296
 - 13.3.2 Mediating Institutions and Obstacles of KTT Activities 296
- 13.4 Analytical Part: Exploration of KTT Activities in Switzerland 298
 - 13.4.1 Drivers of KTT Activities from the Point of View of the *Firm* 299
 - 13.4.1.1 Determinants of KTT Activities of Firms 300
 - 13.4.1.2 Empirical Evidence 301
 - 13.4.2 KTT Activities Determinants from the *University* Point of View 304

13.4.2.1	Determinants of the Propensity to KTT Activities of Universities	306
13.4.2.2	Empirical Evidence	307
13.4.3	Impact of KTT Activities on Innovation and Labour Productivity	308
13.4.3.1	Empirical Evidence	310
13.4.4	KTT Strategies Determinants and their Impact on Innovation Performance	311
13.4.4.1	Firm Characteristics, KTT Strategies, and Innovation Performance	311
13.4.5	Exploration and Exploitation	314
13.4.5.1	Empirical Evidence	317
13.4.6	Technological Proximity Between Firms and Universities and TT	319
13.4.6.1	Empirical Evidence	320
13.5	Conclusion	322
14	Conclusion	327
	<i>Marilena Streit-Bianchi</i>
