

Contents

Preface — v

1	Geometry of nonpositive curvature — 1
1.1	Geodesic metric spaces — 1
1.2	Meet Hadamard spaces — 5
1.3	Equivalent conditions for $\text{CAT}(0)$ — 20
2	Convex sets and convex functions — 30
2.1	Convex sets — 30
2.2	Convex functions — 36
2.3	Convexity and probability measures — 48
3	Weak convergence in Hadamard spaces — 58
3.1	Existence of weak limits — 58
3.2	Weak convergence and convexity — 63
3.3	An application in fixed point theory — 65
4	Nonexpansive mappings — 69
4.1	Kirszbraun–Valentine extension — 69
4.2	Resolvent of a nonexpansive mapping — 73
4.3	Strongly continuous semigroup — 76
5	Gradient flow of a convex functional — 86
5.1	Gradient flow semigroup — 87
5.2	Mosco convergence and its consequences — 103
5.3	Lie–Trotter–Kato formula — 108
6	Convex optimization algorithms — 117
6.1	Convex feasibility problems — 117
6.2	Fixed point approximations — 121
6.3	Proximal point algorithm — 125
7	Probabilistic tools in Hadamard spaces — 139
7.1	Random variables and expectations — 139
7.2	Law of large numbers — 141
7.3	Conditional expectations — 145

8	Tree space and its applications — 158
8.1	Construction of the BHV tree space — 158
8.2	Owen–Provan algorithm — 161
8.3	Medians and means of trees — 165
References — 173	
Index — 183
