

Contents

1	Introduction	1
1.1	Brief Literature Overview	1
1.2	Asymptotic Meaning of the Approach	4
1.2.1	Two Simple Limits of Lyapunov Oscillator	4
1.2.2	Oscillating Time and Hyperbolic Numbers, Standard and Idempotent Basis	6
1.3	Quick 'Tutorial'	9
1.3.1	Remarks on the Basic Functions	9
1.3.2	Viscous Dynamics under the Sawtooth Forcing	9
1.3.3	The Rectangular Cosine Input	11
1.3.4	Oscillatory Pipe Flow Model	12
1.3.5	Periodic Impulsive Loading	15
1.3.6	Strongly Nonlinear Oscillator	15
1.4	Geometrical Views on Nonlinearity	17
1.4.1	Geometrical Example	17
1.4.2	Nonlinear Equations and Nonlinear Phenomena	19
1.4.3	Rigid-Body Motions and Linear Systems	21
1.4.4	Remarks on the Multi-dimensional Case	23
1.4.5	Elementary Nonlinearities	24
1.4.6	Example of Simplification in Nonsmooth Limit	25
1.4.7	Non-smooth Time Arguments	26
1.4.8	Further Examples and Discussion	28
1.4.9	Differential Equations of Motion and Distributions	30
1.5	Non-smooth Coordinate Transformations	33
1.5.1	Caratheodory Substitution	33
1.5.2	Transformation of Positional Variables	33
1.5.3	Transformation of State Variables	35

2	Smooth Oscillating Processes	37
2.1	Linear and Weakly Non-linear Approaches	37
2.2	A Brief Overview of Smooth Methods	38
2.2.1	Periodic Motions of Quasi Linear Systems	38
2.2.2	The Idea of Averaging	39
2.2.3	Averaging Algorithm for Essentially Nonlinear Systems	41
2.2.4	Averaging in Complex Variables	43
2.2.5	Lie Group Approaches	44
3	Nonsmooth Processes as Asymptotic Limits	51
3.1	Lyapunov' Oscillator	51
3.2	Nonlinear Oscillators Solvable in Elementary Functions	54
3.2.1	Hardening Case	56
3.2.2	Localized Damping	59
3.2.3	Softening Case	60
3.3	Nonsmoothness Hidden in Smooth Processes	61
3.3.1	Nonlinear Beats Model	62
3.4	Nonlinear Beat Dynamics: The Standard Averaging Approach	64
3.4.1	Asymptotic of Equipartition	69
3.4.2	Asymptotic of Dominants	71
3.4.3	Necessary Condition of Energy Trapping	73
3.4.4	Sufficient Condition of Energy Trapping	74
3.5	Transition from Normal to Local Modes	74
3.6	System Description	74
3.7	Normal and Local Mode Coordinates	76
3.8	Local Mode Interaction Dynamics	81
3.9	Auto-localized Modes in Nonlinear Coupled Oscillators	85
4	Nonsmooth Temporal Transformations (NSTT)	93
4.1	Non-smooth Time Transformations	93
4.1.1	Positive Time	94
4.1.2	'Single-Tooth' Substitution	96
4.1.3	'Broken Time' Substitution	96
4.1.4	Sawtooth Sine Transformation	97
4.1.5	Links between NSTT and Matrix Algebras	101
4.1.6	Differentiation and Integration Rules	102
4.1.7	NSTT Averaging	103
4.1.8	Generalizations on Asymmetrical Sawtooth Wave	105
4.1.9	Multiple Frequency Case	107
4.2	Idempotent Basis Generated by the Triangular Sine-Wave	109
4.2.1	Definitions and Algebraic Rules	109
4.2.2	Time Derivatives in the Idempotent Basis	111

4.3	Idempotent Basis Generated by Asymmetric Triangular Wave	112
4.3.1	Definition and Algebraic Properties	112
4.3.2	Differentiation Rules	114
4.3.3	Oscillators in the Idempotent Basis	115
4.3.4	Integration in the Idempotent Basis	116
4.4	Discussions, Remarks and Justifications	117
4.4.1	Remarks on Nonsmooth Solutions in the Classical Dynamics	118
4.4.2	Caratheodory Equation	119
4.4.3	Other Versions of Periodic Time Substitutions	122
4.4.4	General Case of Non-invertible Time and Its Physical Meaning	125
4.4.5	NSTT and Cnoidal Waves	125
5	Sawtooth Power Series	131
5.1	Manipulations with the Series	131
5.1.1	Smoothing Procedures	131
5.2	Sawtooth Series for Normal Modes	135
5.2.1	Periodic Version of Lie Series	135
5.3	Lie Series of Transformed Systems	138
5.3.1	Second-Order Non-autonomous Systems	138
5.3.2	NSTT of Lagrangian and Hamiltonian Equations	141
5.3.3	Remark on Multiple Argument Cases	144
6	NSTT for Linear and Piecewise-Linear Systems	145
6.1	Free Harmonic Oscillator: Temporal Quantization of Solutions	145
6.2	Non-autonomous Case	147
6.2.1	Standard Basis	147
6.2.2	Idempotent Basis	148
6.3	Systems under Periodic Pulsed Excitation	149
6.3.1	Regular Periodic Impulses	149
6.3.2	Harmonic Oscillator under the Periodic Impulsive Loading	151
6.3.3	Periodic Impulses with a Temporal 'Dipole' Shift	155
6.4	Parametric Excitation	157
6.4.1	Piecewise-Constant Excitation	157
6.4.2	Parametric Impulsive Excitation	159
6.4.3	General Case of Periodic Parametric Excitation	161
6.5	Input-Output Systems	163
6.6	Piecewise-Linear Oscillators with Asymmetric Characteristics	165
6.6.1	Amplitude-Phase Equations	166
6.6.2	Amplitude Solution	167

6.6.3	Phase Solution	168
6.6.4	Remarks on Generalized Taylor Expansions	172
6.7	Multiple Degrees-of-Freedom Case	173
6.8	The Amplitude-Phase Problem in the Idempotent Basis	177
7	Periodic and Transient Nonlinear Dynamics under Discontinuous Loading	179
7.1	Nonsmooth Two Variables Method	179
7.2	Resonances in the Duffing's Oscillator under Impulsive Loading	182
7.3	Strongly Nonlinear Oscillator under Periodic Pulses	185
7.4	Impact Oscillators under Impulsive Loading	189
8	Strongly Nonlinear Vibrations	195
8.1	Periodic Solutions for First Order Dynamical Systems	195
8.2	Second Order Dynamical Systems	196
8.3	Periodic Solutions of Conservative Systems	198
8.3.1	The Vibroimpact Approximation	198
8.3.2	One Degree-of-Freedom General Conservative Oscillator	202
8.3.3	A Nonlinear Mass-Spring Model That Becomes Linear at High Amplitudes	205
8.3.4	Strongly Non-linear Characteristic with a Step-Wise Discontinuity at Zero	207
8.3.5	A Generalized Case of Odd Characteristics	209
8.4	Periodic Motions Close to Separatrix Loop	211
8.5	Self-excited Oscillator	214
8.6	Strongly Nonlinear Oscillator with Viscous Damping	218
8.6.1	Remark on NSTT Combined with Two Variables Expansion	222
8.6.2	Oscillator with Two Nonsmooth Limits	225
8.7	Bouncing Ball	230
8.8	The Kicked Rotor Model	234
8.9	Oscillators with Piece-Wise Nonlinear Restoring Force Characteristics	235
9	Strongly Nonlinear Waves	241
9.1	Wave Processes in One-Dimensional Systems	241
9.2	Klein-Gordon Equation	242
10	Impact Modes and Parameter Variations	245
10.1	An Introductory Example	245
10.2	Parameter Variation and Averaging	249
10.3	A Two-Degrees-of-Freedom Model	252
10.4	Averaging in the 2DOF System	253
10.5	Impact Modes in Multiple Degrees of Freedom Systems	256

10.5.1 A Double-Pendulum with Amplitude Limiters.....	258
10.5.2 A Mass-Spring Chain under Constraint Conditions	260
10.6 Systems with Multiple Impacting Particles.....	262
11 Principal Trajectories of Forced Vibrations	265
11.1 Introductory Remarks.....	265
11.2 Principal Directions of Linear Forced Systems.....	267
11.3 Definition for Principal Trajectories of Nonlinear Discrete Systems	268
11.4 Asymptotic Expansions for Principal Trajectories.....	269
11.5 Definition for Principal Modes of Continuous Systems.....	271
12 NSTT and Shooting Method for Periodic Motions	275
12.1 Introductory Remarks.....	275
12.2 Problem Formulation	277
12.3 Sample Problems and Discussion	279
12.3.1 Smooth Loading	279
12.3.2 Step-Wise Discontinuous Input.....	286
12.3.3 Impulsive Loading	286
12.4 Other Applications	290
12.4.1 Periodic Solutions of the Period - n	290
12.4.2 Two-Degrees-of-Freedom Systems	293
12.4.3 The Autonomous Case	294
13 Essentially Non-periodic Processes	295
13.1 Nonsmooth Time Decomposition and Pulse Propagation in a Chain of Particles	295
13.2 Impulsively Loaded Dynamical Systems	298
13.2.1 Harmonic Oscillator under Sequential Impulses.....	301
13.2.2 Random Suppression of Chaos	303
14 Spatially-Oscillating Structures	305
14.1 Periodic Nonsmooth Structures	305
14.2 Averaging for One-Dimensional Periodic Structures	312
14.3 Two Variable Expansions.....	313
14.4 Second Order Equations.....	315
14.5 Acoustic Waves from Non-smooth Periodic Boundary Sources	319
14.6 Spatio-temporal Periodicity	323
14.7 Membrane on a Two-Dimensional Periodic Foundation	326
14.8 The Idempotent Basis for Two-Dimensional Structures	332
References	339
