Preface *XV*

List of Abbreviations *XVII*

1	General Overview of Food Hydrocolloids	1
1.1	Introduction to the World of Hydrocolloids	1
1.2	Plant Extracts	2
1.2.1	Agar	2
1.2.2	Alginates and PGA	6
1.2.3	Carrageenan	10
1.2.4	Pectins	16
1.2.5	Native and Modified Starches	21
1.2.6	Furcellaran	27
1.2.7	Larch Gum	28
1.3	Seed Flours	29
1.3.1	Guar Gum	29
1.3.2	Locust Bean Gum (Carob)	32
1.3.3	Tara Gum	34
1.3.4	Tamarind Seed Gum	36
1.3.5	Konjac Gum	37
1.4	Exudates	39
1.4.1	Acacia Gum/Gum Arabic	39
1.4.2	Tragacanth	43
1.4.3	Karaya Gum	45
1.4.4	Ghatti Gum	48
1.5	Bacterial Polysaccharides	50
1.5.1	Xanthan	50
1.5.2	Others	53
1.6	Overview Tables for the Most Important Cellulose Derivatives	60
1.7	Commercial Development – Global Market	65
	References	68

2	Rheology of Food Hydrocolloids	69
2.1	Introduction to Rheology, Rheometry, and Visco-Elasticity	69
2.2	Definitions	69
2.3	Basic Data	72
2.4	Different Types of Flow Behaviour	72
2.5	Structures of Polymers with Shear-Thinning Flow Behaviour	78
2.6	Causes of Shear-Thickening of Products	80
2.7	Factors that Influence Rheological Behaviour	81
2.8	Viscosity Measurement of Thickening Hydrocolloid Solutions	82
2.9	Characterization of Gels	83
2.10	Viscosimeters and Rheometers	85
2.11	Relationship between Rheology and Sensory	88
	References	90
3	Cellulose	91
3.1	Introduction, History and Development	91
3.1.1	Introduction	91
3.1.2	Historical Origin	92
3.1.3	Industrial Development from the Beginning to Today	92
3.1.4	Current Data for Cellulose Processing	94
3.2	Raw Materials and Biological Origin	95
3.2.1	Occurrence	95
3.2.2	Potential Sources for Natural Cellulosic Fibres	95
3.2.3	Wood as Cellulose Supplier	96
3.2.3.1	Tree Wood and Perennial Plants	96
3.2.3.2	Annual Plants	99
3.2.4	Bacterial Cellulose	100
3.2.5	Biosynthesis	101
3.2.6	Biological Composition	103
3.2.6.1	Cotton Fibres	107
3.2.6.2	Wood Fibres	107
3.2.7	Explanation for Industrial Derivatization	107
3.3	Manufacture of Pulp	109
3.3.1	Purification of Natural Cellulose Sources	109
3.3.2	Cotton Linters	109
3.3.3	Wood	110
3.4	Chemical Composition and Structure	111
3.4.1	Molecular Structure	111
3.4.1.1	Basic Structure	111
3.4.1.2	Differences between Cellulose and Starch	113
3.4.1.3	Structural Anomalies	114
3.4.1.4	Chain Length and Molecular Weight	115
3.4.2	Secondary Structure	117
3.4.2.1	Lattice Structure and Crystallization	118
3.4.2.2	Hydrogen Bonding	126

3.4.2.3	Chain Stiffness of the Cellulose Molecule	127
3.4.3	Supramolecular Structure of Native Cellulose Fibres	127
3.5	Rheology	129
3.5.1	Dissolution Behaviour	129
3.5.2	Gelation and Behaviour with Other Ingredients	130
3.6	Stability	130
3.6.1	Physical Properties	130
3.6.2	Stability in Food Products	131
3.6.3	Chemical Reactions	131
3.6.4	Possibilities for Degradation	134
3.7	Analysis and Rheometry	135
3.7.1	Qualitative Analysis	135
3.7.2	Quantitative Determination	136
3.7.3	Characterization of Structure of Cellulose Fibres	136
3.7.4	Viscosity Measurement	137
3.8	Synergies with Other Hydrocolloids	137
3.9	Application in Food Products	137
3.10	Non-food Applications	138
3.11	Options for Derivatization of Cellulose	138
3.12	Nutritional Properties	138
3.13	Legislation	140
	References	141
4	Microcrystalline Cellulose	143
4.1	General Manufacturing Process	143
4.1.1	Powdered MCC	144
4.1.2	Colloidal MCC	145
4.1.2.1	Principle of the Colloidal MCC Process	145
4.1.2.2	Co-processing with Other Hydrocolloids	145
4.1.2.3	Physical Modification with Other Functional Substances ('Alloying Concept')	147
4.2	Chemistry	148
4.3	Rheology	148
4.3.1	Dissolution Behaviour	148
4.3.2	Gelation and Behaviour with Other Ingredients	149
4.3.3	Special Behaviour of Colloidal MCC with Guar Gum	150
4.4	Stability	151
4.5	Rheometry	155
4.6	Preparation of MCC Dispersions in Food	155
4.6.1	Key Factors	155
4.6.2	Instruction and Testing	156
4.7	Synergies with Other Hydrocolloids	157
4.8	Functions and Properties of MCC	158
4.8.1	Powdered MCC	158
4.8.2	Specialist Powdered MCC	158

4.8.3	Colloidal MCC	159
4.9	Food Applications with Typical Formulations	159
4.9.1	Baked Goods, Snacks, and Fillings	161
4.9.2	Dairy Products – Ice Cream, Desserts, and Cheese Preparations	163
4.9.3	Whipping Creams – Dairy and Vegetable Fat Based	166
4.9.4	Confectionery	169
4.9.5	Beverages (RTD)	171
4.9.6	Soups, Sauces, Salad Dressings, Marinades, and Spreads	176
4.9.7	Meat Products	180
4.9.8	Applications for Powdered Cellulose	180
4.10	Non-food Applications	181
4.11	Nutritional Properties	181
4.12	Legislation	182
	References	183
5	Fundamentals of Water-Soluble Cellulose Ethers and Methylcellulose	185
5.1	Manufacturing Process of Cellulose Ethers	185
5.1.1	General Principles	185
5.1.2	Production of the Monoether Methylcellulose	188
5.2	Chemistry	190
5.3	Rheology	191
5.3.1	General Swelling and Dissolution Behaviour of Cellulose Ethers	191
5.3.1.1	Factors of Influence	191
5.3.1.2	Stages of Swelling to Dissolution	194
5.3.2	Dissolution Behaviour of the Monoether Methylcellulose	196
5.3.2.1	Suitable Solvents	196
5.3.2.2	Physicochemical Data	197
5.3.2.3	Molecular Weight and Viscosity	198
5.3.2.4	Rheological Profile – Factors Influencing the Cold Viscosity	198
5.3.2.5	Surface Activity of Aqueous Solutions	204
5.3.2.6	Mixtures and Blending for Viscosity Adjustment	206
5.3.2.7	Available Solid Forms of MC	208
5.3.3	Gelation of Methylcellulose	208
5.3.3.1	Basics and Relationships	208
5.3.3.2	Influence of Solvent on Gelation	214
5.3.3.3	Mechanism and Cause of Heat-Induced Gelation	216
5.3.3.4	Non-thermal Gelation	218
5.3.3.5	Difference between Methylcellulose and HPMC	218
5.3.3.6	Gel Strength of Different Food Binders	219
5.3.4	Dispersion and Hydration	219
5.3.5	Technique of Delayed Hydration	222
5.3.6	Functional Properties Resulting from Methylation	223
5.3.7	Behaviour of Methylcellulose with Other Ingredients	224
5.3.8	Methylcellulose and HPMC for Fat Reduction in Coatings	230

5.3.9	Emulsifying Properties of Methylcellulose	233
5.4	Stability	235
5.4.1	Storage Stability of Cellulose Ethers	235
5.4.2	Microbiological Stability	236
5.4.3	Process Stability after Hydration	237
5.5	Rheometry	241
5.5.1	Analytical Procedures to Define Substitution of MC	241
5.5.2	Determination of the Molecular Weight	242
5.5.3	Methods of Identification and Quantitative Determination	242
5.6	Synergies with Other Hydrocolloids	242
5.7	Food Applications with Typical Formulations	243
5.7.1	Bakery Products	244
5.7.1.1	Functions and Overview	244
5.7.1.2	Typical Formulations	245
5.7.2	Fillings	248
5.7.2.1	Functions and Overview	248
5.7.2.2	Typical Formulations	248
5.7.3	Glazes, Predusts, Coatings, and Batters	248
5.7.3.1	Functions and Overview	248
5.7.3.2	Typical Formulations	250
5.7.4	Reformed and Extruded Products	250
5.7.4.1	Functions and Overview	250
5.7.4.2	Typical Formulations	252
5.7.5	Soups and Sauces, Salad Dressings, and Marinades	252
5.7.5.1	Functions and Overview	252
5.7.5.2	Starch–Methylcellulose Synergism in Sauces	256
5.7.5.3	Traditional Soups, Sauces, Toppings	256
5.7.5.4	Emulsions	258
5.7.6	Confectionery and Desserts	260
5.7.7	Meat and Fish Products	260
5.7.8	Pet Food and Animal Feed	260
5.8	Non-food Applications	263
5.9	Nutritional Properties	271
5.10	Legislation	272
	References	273
6	Ethylcellulose	275
6.1	Manufacturing	275
6.2	Chemistry	276
6.3	Rheology	277
6.3.1	Physicochemical Parameters	277
6.3.2	Dissolution Behaviour	278
6.3.2.1	Solubility in Water	278
6.3.2.2	Suitable Solvents	279
6.3.2.3	Viscosity–Concentration Relationships	281

6.3.2.4	Blending	283
6.3.3	Gelation and Behaviour with Other Ingredients	286
6.3.3.1	Overview	286
6.3.3.2	Compatibility with Resins	287
6.3.3.3	Compatibility with Plasticizers	291
6.3.4	Physical Properties	295
6.3.5	Temperature and Viscosity	298
6.3.6	Films	298
6.3.6.1	Selection of Solvent	298
6.3.6.2	Selection of Plasticizer	299
6.4	Stability	299
6.5	Rheometry	305
6.6	Synergies with Other Hydrocolloids	305
6.7	Food Applications with Typical Formulations	306
6.7.1	Overview of Functions	306
6.7.2	Coating and Encapsulation with Ethylcellulose	308
6.8	Non-food Applications	308
6.9	Nutritional Properties	315
6.10	Legislation	316
	References	318
7	Hydroxypropylcellulose	319
7.1	Manufacturing	319
7.2	Chemistry	319
7.3	Rheology	321
7.3.1	Physicochemical Parameters and Properties	321
7.3.2	Dissolution Behaviour	322
7.3.2.1	Suitable Solvents	322
7.3.2.2	Dissolution Curves in Water and Aqueous Alcohol Mixtures	325
7.3.2.3	Surface and Interfacial Tension	326
7.3.3	Gelation and Behaviour with Other Ingredients	327
7.4	Stability	329
7.4.1	Process Stability	329
7.4.2	Hygroscopicity	331
7.4.3	Polymer Degradation	331
7.4.4	Combustion	332
7.4.5	Thermoplasticity and Film Formation	332
7.5	Rheometry	333
7.6	Synergies with Other Hydrocolloids	333
7.7	Food Applications with Typical Formulations	334
7.7.1	Foam Products	334
7.7.2	Films and Coatings	335
7.8	Non-food Applications	339
7.9	Nutritional Properties	339

7.10	Legislation	339
	References	341
8	Hydroxypropylmethylcellulose	343
8.1	Manufacturing	343
8.2	Chemistry	344
8.3	Rheology	345
8.3.1	Dissolution Behaviour	345
8.3.2	Gelation of Hydroxypropylmethylcellulose	347
8.3.3	Behaviour of HPMC with Other Ingredients	348
8.4	Stability	350
8.5	Rheometry	351
8.6	Synergies with Other Hydrocolloids	352
8.7	Food Applications with Typical Formulations	352
8.7.1	Foams	352
8.7.2	Films and Coatings with HPMC	354
8.7.2.1	Overview	354
8.7.2.2	Typical Formulations	354
8.7.3	Fillings	356
8.7.4	Bakery Products with HPMC	358
8.7.4.1	Traditional Baked Goods	358
8.7.4.2	Gluten-Free Products	361
8.7.5	Chilled and Frozen Dairy Products and Desserts	363
8.7.5.1	Functions and Overview	363
8.7.5.2	Typical Formulations	364
8.7.6	Confectionery	366
8.7.7	Reformed Products with HPMC	368
8.7.8	Soups, Sauces, Salad Dressings, and Marinades	370
8.7.9	Beverages	372
8.7.9.1	Functions and Overview	372
8.7.9.2	Typical Formulations	372
8.7.10	Flavour Concentrates	372
8.7.10.1	Functions and Overview	372
8.7.10.2	Typical Formulations	374
8.8	Non-food Applications	375
8.9	Nutritional Properties	375
8.10	Legislation	375
	References	376
9	Methylethylcellulose	379
9.1	Manufacturing	379
9.2	Chemistry	380
9.3	Rheology	381
9.3.1	Dissolution Behaviour	381
9.3.2	Gelation and Behaviour with Other Ingredients	382

9.4	Stability	382
9.5	Rheometry	383
9.6	Synergies with Other Hydrocolloids	383
9.7	Food Applications with Typical Formulations	384
9.8	Non-food Applications	384
9.9	Nutritional Properties	385
9.10	Legislation	385
	References	385
10	Sodium Carboxymethylcellulose	387
10.1	Manufacturing	387
10.2	Chemistry	388
10.3	Rheology	390
10.3.1	Dissolution Behaviour	390
10.3.1.1	General Correlations	390
10.3.1.2	Physicochemical Parameters and Properties	394
10.3.1.3	Rheological Profiles and CMC Design	394
10.3.1.4	Shear-Thinning of Polymer Solutions	395
10.3.1.5	Relationship between DS, DP, and Flow Characteristics of CMC	396
10.3.1.6	Effect of Shear on CMC Solutions	396
10.3.1.7	Influence of Solvent Mixtures	400
10.3.1.8	Effect of Dissolved Substances on the Viscosity	402
10.3.1.9	Blends of CMC Types	403
10.3.2	Gelation of Carboxymethylcellulose	404
10.3.3	Behaviour of CMC with Other Ingredients	408
10.4	Stability	422
10.4.1	Microbiological Attacks	422
10.4.2	Chemical Degradation	423
10.4.3	Functional Stability	423
10.4.4	Films of CMC	431
10.5	Rheometry	433
10.6	Synergies of Cellulose Gum with Other Hydrocolloids	434
10.6.1	Behaviour with Other Thickeners	434
10.6.2	Interactions with Traditional Gelling Agents	434
10.7	Functional Properties of Carboxymethylcellulose	435
10.8	Use of Purified CMC in Regulated Applications	436
10.9	Food Applications with Typical Formulations	438
10.9.1	Bakery and Cereal Products	438
10.9.2	Dairy Products – Ice Cream, Desserts, and Cheese Preparations	441
10.9.3	Syrups and Fillings	444
10.9.4	Beverages (RTD, Concentrates, Emulsions)	445
10.9.5	Soups, Sauces, Salad Dressings, and Marinades	451
10.9.6	Meat Products	455
10.9.6.1	Scalded/Boiled Emulsified Meat Products – Sausages	455

10.9.6.2	Injection Brines	458
10.9.6.3	Sausage Casings	459
10.9.7	Pet Food and Animal Feed	460
10.9.8	Wine	461
10.9.8.1	Summary	461
10.10	Non-food Applications	464
10.10.1	Applications for Standard Grades of CMC – Overview	464
10.10.2	Technical and Regulated CMC Applications	466
10.10.3	General Overview for Use of CMC	471
10.11	Nutritional Properties	473
10.12	Legislation	473
10.12.1	European Union	473
10.12.2	Other Countries (Non-EU)	476
	References	477
11	Crosslinked Sodium Carboxymethylcellulose	479
11.1	Manufacturing Process	479
11.2	Chemistry	479
11.3	Rheology	480
11.3.1	Dissolution Behaviour	480
11.3.2	Gelation and Behaviour with Other Ingredients	481
11.4	Stability	481
11.5	Rheometry	481
11.6	Synergies with Other Hydrocolloids	481
11.7	Food Applications with Typical Formulations	482
11.8	Non-food Applications	482
11.9	Nutritional Properties	482
11.10	Legislation	483
	References	483
12	Enzymatically Hydrolysed Carboxymethylcellulose	485
12.1	Manufacturing Process	485
12.2	Chemistry	485
12.3	Rheology	487
12.3.1	Dissolution Behaviour	487
12.3.2	Gelation and Behaviour with Other Ingredients	487
12.4	Stability	487
12.5	Rheometry	488
12.6	Synergies with Other Hydrocolloids	488
12.7	Food Applications with Typical Formulations	489
12.8	Non-food Applications	489
12.9	Nutritional Properties	489
