Preface	ix
1 Geometric Background	1
1.1 Some classes of univalent functions	1
1.1.1 Starlike functions	1
1.1.2 Class $S^*[0]$. Nevanlinna's condition	2
1.1.3 Classes $S^*[\tau]$, $\tau \in \Delta$. Hummel's representation	3
1.1.4 Spirallike functions. Špaček's condition	4
1.1.5 Close-to-convex and φ -like functions	6
1.2 Boundary behavior of holomorphic functions	7
1.3 The Julia–Wolff–Carathéodory and Denjoy–Wolff Theorems	10
1.4 Functions of positive real part	13
2 Dynamic Approach	17
2.1 Semigroups and generators	17
2.2 Flow invariance conditions and parametric representations of semigroup generators	19
2.3 The Denjoy–Wolff and Julia–Wolff–Carathéodory Theorems for semigroups	23
2.4 Generators with boundary null points	25
2.5 Univalent functions and semi-complete vector fields	34
3 Starlike Functions with Respect to a Boundary Point	39
3.1 Robertson's classes. Robertson's conjecture	39
3.2 Auxiliary lemmas	41
3.3 A generalization of Robertson's conjecture	44
3.4 Angle distortion theorems	46
3.4.1 Smallest exterior wedge	46
3.4.2 Biggest interior wedge	49
3.5 Functions convex in one direction	56

4	Spirallike Functions with Respect to a Boundary Point	63
4.1	Spirallike domains with respect to a boundary point	63
4.2	A characterization of spirallike functions with respect to a boundary point	69
4.3	Subordination criteria for the class $\text{Spiral}_\mu[1]$	73
4.4	Distortion Theorems	75
4.4.1	‘Spiral angle’ distortion theorems	75
4.4.2	Growth estimates for semigroup generators	79
4.4.3	Growth estimates for spirallike functions	81
4.4.4	Classes $G(\mu, \beta)$	84
4.5	Covering theorems for starlike and spirallike functions	90
5	Königs Type Starlike and Spirallike Functions	95
5.1	Schröder’s and Abel’s equations	95
5.2	Remarks on stochastic branching processes	99
5.3	Königs’ linearization model for dilation type semigroups. Embeddings	103
5.4	Valiron’s type linearization models for hyperbolic type semigroups. Embeddings	105
5.5	Pommerenke’s and Baker–Pommerenke’s linearization models for semigroups with a boundary sink point	112
5.5.1	Pommerenke’s linearization model for automorphic type mappings	112
5.5.2	Baker–Pommerenke’s model for non-automorphic type self-mappings	116
5.5.3	Higher order angular differentiability at boundary fixed points. A unified model	117
5.6	Embedding property via Abel’s equation	119
6	Rigidity of Holomorphic Mappings and Commuting Semigroups	121
6.1	The Burns–Krantz theorem	122
6.2	Rigidity of semigroup generators	128
6.3	Commuting semigroups of holomorphic mappings	133
6.3.1	Identity principles for commuting semigroups	133
6.3.2	Dilation type	140
6.3.3	Hyperbolic type	144
6.3.4	Parabolic type	146
7	Asymptotic Behavior of One-parameter Semigroups	153
7.1	Dilation case	154
7.1.1	General remarks and rates of convergence	154
7.1.2	Argument rigidity principle	157
7.2	Hyperbolic case	159
7.2.1	Criteria for the exponential convergence	159

7.2.2	Angular similarity principle	168
7.3	Parabolic case	173
7.3.1	Discrete case	173
7.3.2	Continuous case	176
7.3.3	Universal asymptotes	184
8	Backward Flow Invariant Domains for Semigroups	195
8.1	Existence	195
8.2	Maximal FIDs. Flower structures	205
8.3	Examples	208
8.4	Angular characteristics of flow invariant domains	211
8.5	Additional remarks	216
9	Appendices	221
9.1	Controlled Approximation Problems	221
9.1.1	Setting of approximation problems	221
9.1.2	Solutions of approximation problems	223
9.1.3	Perturbation formulas	231
9.2	Weighted semigroups of composition operators	240
	Bibliography	247
	Subject Index	257
	Author Index	261
	Symbols	263
	List of Figures	265
