Preface — v

Table for physical constants — ix

1 Introduction — 1

- 1.1 Characteristic of electron microscopy — 1
- 1.2 What information can be obtained by electron microscopy? — 2
- 1.3 Various types of electron microscopy — 5

2 Structure and principle of electron microscopes — 8

- 2.1 Structure of transmission electron microscope — 8
- 2.2 Observation mechanism of atoms by electrons — 10
- 2.3 Information from electron diffraction pattern — 13
- 2.4 High-resolution electron microscopy — 15
- 2.5 Scanning electron microscope — 17
- 2.6 Electron energy-loss spectroscopy — 19
- 2.7 Energy dispersive X-ray spectroscopy — 22
- 2.8 High-angle annular dark-field scanning TEM — 23
- 2.9 Electron holography and Lorentz microscopy — 24
- 2.10 Image simulation — 26

3 Practice of HREM — 28

- 3.1 Sample preparation — 28
- 3.2 Specimen preparation methods — 28
- 3.3 Structure analysis by X-ray diffraction — 31
- 3.4 TEM observation — 33
- 3.5 HREM observation — 38
- 3.6 Fourier filtering — 41
- 3.7 Resolution of HREM images — 42
- 3.8 Prevention of damage and contamination — 43
- 3.9 Taking images and reading data — 44
- 3.10 Mental attitude for TEM — 45

4 Characterization by HREM — 46

- 4.1 What information can be obtained? — 46
- 4.2 Direct atomic observation — 46
- 4.3 Crystallographic image processing — 51
- 4.4 Comparison of HREM image with calculated images — 53
- 4.5 Atomic coordinates from HREM image — 54

4.6	Combination of HREM and electron diffraction —	56
4.7	Quantitative HREM analysis with residual indices —	61
4.8	Detection of atomic disordering by difference image —	64
4.9	Combination of diffraction amplitudes and phases —	70
4.10	Structural optimization by molecular orbital calculation —	72
4.11	Three-dimensional high-resolution imaging —	74
4.12	Detection of doping atoms in C_{60} solid clusters —	77
5	Electron diffraction analysis of nanostructured materials —	87
5.1	Modulated superstructures of Tl-based copper oxides —	87
5.2	Modulate structures of lanthanoid-based copper oxides —	91
5.3	Oxygen ordering in $YBa_2Cu_3O_{7-x}$ —	94
5.4	Structures of Bi-based copper oxides —	98
5.5	Twin structures in BN nanoparticles —	100
6	HREM analysis of nanostructured materials —	110
6.1	Defect structures —	110
6.2	Interfaces and surface structures —	113
6.3	GaAs-based semiconductor devices —	116
6.4	Zeolite materials —	119
6.5	Solid clusters and doping atoms —	120
6.6	Surface structure with light elements —	122
6.7	Crystal structures of Pb-based copper oxides —	124
6.8	Structures of Sm-based copper oxides —	129
6.9	Y-based copper oxides with high J_c —	131
6.10	BN nanotubes —	134
6.11	BN nanotubes with cup-stacked structures —	140
6.12	BN nanotubes encaging Fe nanowires —	145
6.13	Nanoparticles with 5-fold symmetry —	149
A	Appendix —	158
A.1	7 crystal systems and 14 Bravais lattices in three dimensions —	158
A.2	Miller indices and direction in the crystals —	159
A.3	Distances d_{hkl} and angles ϕ of lattice planes —	160
