

Contents

1	Introduction	1
1.1	General Remarks	1
1.2	Thin Film Physics and Solid State Physics	4
1.3	A Few Words on Optical Coating Preparation	7
1.3.1	PVD and CVD Techniques	7
1.3.2	Some Considerations on PIAD	9
1.3.3	Property Correlations	12
1.4	To the Content and Organisation of this Book	14
	References	15

Part I Basics

2	Basic Knowledge on Optical Constants	21
2.1	Basic Classical Dispersion Models in Linear Optics	21
2.2	Analytical Properties of the Dielectric Function	26
2.3	Optical Constants and Mass Density in the Classical Picture	29
2.4	Some Other Dispersion Models, Often Used in Thin Film Characterization Practice: Classical Models and Beyond	34
2.4.1	Preliminary Remarks	34
2.4.2	Brendel Model	40
2.4.3	Tauc–Lorentz-Model	42
2.4.4	Cody–Lorentz-Model	43
2.4.5	Forouhi–Bloomer-Model	44
2.5	Material Mixtures	44
2.5.1	General Idea	44
2.5.2	Maxwell Garnett (MG) Approach	47
2.5.3	Lorentz–Lorenz (LL) Approach	48
2.5.4	Effective Medium Approximation (EMA) or Bruggeman Approach	49
2.5.5	A Model Calculation Based on the Maxwell Garnett Approach	50
	References	51

3 Plane Interfaces	55
3.1 Fresnel's Formulas	55
3.2 Real Films, Real Surfaces	58
3.2.1 Some Experimental Results	58
3.2.2 Remarks on Optical Isotropy	61
3.2.3 Remarks on Optical Inhomogeneity	63
3.2.4 Remarks on Surface Roughness	63
3.3 Sharp Interfaces Versus Continuous Profiles	70
3.4 Intensity Coefficients	72
References	79
4 Thin Films, Substrates, and Multilayers	81
4.1 Single Films	81
4.1.1 General Equations	81
4.1.2 Halfwave Layers	83
4.1.3 Quarterwave Layers	83
4.1.4 Layers with a Weak Refractive Index Gradient (Normal Incidence)	87
4.2 Substrates	92
4.3 Single Film on a Substrate	93
4.4 Multilayers	95
4.5 Examples	97
4.5.1 Homogeneous Quarter- and Halfwave Layers	97
4.5.2 Two QW-Layers	98
4.5.3 Quarterwave (QW) Stacks	99
4.5.4 Bragg Reflectors	104
4.5.5 Rugate Filters	108
4.5.6 Narrow Bandpass Filters (NBP)	109
References	113

Part II Reverse Search Procedures

5 Experimental Determination of Thin Film Optical Constants	117
5.1 Experimental Techniques	117
5.1.1 Ex Situ Spectrophotometry	117
5.1.2 Measurement of Thermal or Vacuum Shifts	127
5.1.3 In Situ Transmission Spectroscopy During Film Growth	128
5.1.4 Remarks on Ellipsometry	131
5.2 Optical Constants of Substrates	132
5.3 Thin Films: Quick Optical Gap Determination	133
5.4 Thin Films: Envelope Methods	133
5.4.1 Normal Incidence	133
5.4.2 Oblique Incidence	136

5.5	Thin Films: Curve Fitting Procedures Based on the Oscillator Model	137
5.5.1	General Mathematical Approach	137
5.5.2	Considerations on the Data Grid	140
5.5.3	Examples	143
5.5.4	Consistency with Other Approaches	148
5.6	Thin Films: Optical Constants Determination Without the Explicit Use of Dispersion Models.	149
5.7	Straightforward Re-Engineering of Multilayer Systems Based on In Situ Transmittance Data	151
	References	155
6	Material Aspects in Coating Design.	159
6.1	Introductory Remarks	159
6.2	General Rules	160
6.2.1	A Theorem on Solvability and Conclusions from the Maximum Principle	160
6.2.2	Cutoff Wavelength and Range of Refractive Indices Available	162
6.2.3	Oblique Incidence.	164
6.3	Quarterwave Stacks and Optical Constants	165
6.4	Broadband Antireflection Coatings and Optical Constants	166
6.5	Feasibility Considerations and Computational Manufacturing	170
6.5.1	Motivation	170
6.5.2	Idea of Computational Manufacturing Runs	171
6.5.3	Error Data Acquisition	172
6.5.4	Example: Gain Flattening Filter	179
6.5.5	Implementation of Computational Manufacturing into the Coating Production Chain	180
	References	182

Part III Basic Coating Materials for UV/VIS Applications

7	Oxide Coatings: Porous and Dense Films	187
7.1	Introduction	187
7.2	Simplest Theoretical Considerations	188
7.3	Parameter Correlations in Important Oxide Coating Materials	196
7.3.1	Titanium Dioxide TiO_2	196
7.3.2	Niobium Pentoxide Nb_2O_5	196
7.3.3	Tantalum Pentoxide Ta_2O_5	199
7.3.4	Zirconium Dioxide ZrO_2	199
7.3.5	Hafnium Dioxide HfO_2	199
7.3.6	Aluminum Oxide Al_2O_3	203
7.3.7	Silicon Dioxide SiO_2	204
	References	205

8 Other UV/VIS Coating Materials	209
8.1 Fluoride Coatings	209
8.2 Fluoride-Enhanced Aluminum as a VUV Reflector	214
8.3 Silver Films in Reflector Coatings	217
8.4 Organic Coatings and Derivatives	220
8.4.1 Amorphous Hydrogenated Carbon Layers	220
8.4.2 Specifics of Organic Molecular Films: Examples	223
8.4.3 Extended Detail: Basic Ideas of the Semiclassical Description of Molecular Spectra	231
References	239
 Part IV Subwavelength- and Nanostructured Coatings	
9 Heterogeneous Coatings: General Remarks	245
9.1 Attempt of a Classification	245
9.2 Grating Waveguide Structures	250
9.2.1 General Idea	250
9.2.2 Propagating Modes and Grating Period	252
9.2.3 Impact of Absorption	254
9.2.4 Example: Narrowline Reflector Design	255
References	257
10 Strongly Porous Materials and Surface Structures	259
10.1 Motheye Structures as Low Effective Index Films for Antireflection Purposes	259
10.1.1 Examples of Periodic Motheye Structures	259
10.1.2 Stochastic Motheye Structures on Plastic Surfaces	260
10.1.3 Remarks on the Function Principle of Motheye Structures	261
10.2 Stochastic Surface Structures on Absorbing Materials	263
10.3 Porous Silicon Dioxide Layers	266
References	266
11 Dielectric Mixtures	269
11.1 Motivation	269
11.2 Examples of Inorganic Mixture Coatings	272
11.2.1 Optical Parameters Obtained from Oxide Mixtures	272
11.2.2 Stress in Mixture Coatings	274
11.3 A Few Words on Inorganic–Organic Hybrid Coatings	275
References	277
12 Metal Island Films	279
12.1 First Considerations	279
12.2 Metal Islands in a Dielectric Host: A Handable Building Block for Optical Coating Design	283

12.3 Effective Optical Constants of Metal Island Films	286
12.4 Experimental Examples	295
12.4.1 A Few Words on Experimental Methods	295
12.4.2 Example 1: Copper Island Films in Aluminum Oxide—Dependence of the Effective Optical Constants on the Amount of Copper	297
12.4.3 Example 2: Silver Island Films in Aluminum Oxide—Dependence of the Effective Optical Constants on the Deposition Temperature	305
12.5 Specifics of Optical Monitoring	307
12.5.1 Theoretical Approach	307
12.5.2 Example: Monitoring of the Growth of Aluminum Films	309
12.6 Metal Island Films in Multilayer Coatings: Examples	311
References	314
 13 Concluding Remarks	 317
