Introduction	vii
Chapter 1. Fundamental properties of smoothness	1
1. Multilinear mappings and polynomials	2
2. Complexification	22
3. Fréchet smoothness	26
4. Taylor polynomial	40
5. Smoothness classes	54
6. Power series and their convergence	61
7. Complex mappings	68
8. Analytic mappings	69
9. Notes and remarks	79
Chapter 2. Basic properties of polynomials on \mathbb{R}^n	82
1. Spaces of polynomials on \mathbb{R}^n	83
2. Cubature formulae	87
3. Estimates related to Chebyshev polynomials	96
4. Polynomials and L_p -norms on \mathbb{R}^n	101
5. Polynomial identities	111
6. Estimates of coefficients of polynomials	119
7. Notes and remarks	126
Chapter 3. Weak continuity of polynomials and estimates of coefficients	130
1. Tensor products and spaces of multilinear mappings	131
2. Weak continuity and spaces of polynomials	135
3. Weak continuity and ℓ_1	159
4. (p, q) -summing operators	165
5. Estimates of coefficients of multilinear mappings	170
6. Bohr radius	176
7. Notes and remarks	179
Chapter 4. Asymptotic properties of polynomials	184
1. Finite representability and ultraproducts	185
2. Spreading models	192
3. Polynomials and p -estimates	198
4. Separating polynomials. Symmetric and sub-symmetric polynomials	203

5. Stabilisation of polynomials	214
6. Sub-symmetric polynomials on \mathbb{R}^n	223
7. Polynomial algebras on Banach spaces	229
8. Notes and remarks	235
Chapter 5. Smoothness and structure	239
1. Convex functions	240
2. Smooth bumps and structure I	257
3. Smooth variational principles	263
4. Smooth bumps and structure II	270
5. Local dependence on finitely many coordinates	278
6. Isomorphically polyhedral spaces	290
7. L_p spaces	294
8. $C(K)$ spaces	304
9. Orlicz spaces	307
10. Notes and remarks	321
Chapter 6. Structural behaviour of smooth mappings	328
1. Weak uniform continuity and higher smoothness	329
2. Bidual extensions	333
3. Class \mathcal{W}	338
4. Uniformly smooth mappings from $C(K)$, K scattered	349
5. Uniformly smooth mappings from \mathcal{W} -spaces	357
6. Fixing the canonical basis of c_0	362
7. Ranges of smooth mappings	365
8. Harmonic behaviour of smooth mappings	369
9. Notes and remarks	378
Chapter 7. Smooth approximation	382
1. Separation	383
2. Approximation by polynomials	391
3. Approximation by real-analytic mappings	399
4. Infimal convolution	407
5. Approximation of continuous mappings and partitions of unity	411
6. Non-linear embeddings into $c_0(\Gamma)$	422
7. Approximation of Lipschitz mappings	428
8. Approximation of C^1 -smooth mappings	452
9. Approximation of norms	456
10. Notes and remarks	462
Bibliography	467
Notation	490
Index	493
