Contents

1	**Design of experiments – systematic mania?**	**11**
1.1	Design of experiments as part of the challenges and criteria of success in modern R&D	11
1.2	A typical experiment in coatings formulation	17
1.3	Factors, Levels, etc. – some vocabulary at the beginning	18
1.4	Classical design of experiments and the limitations	20
1.4.1	Conventional methods – more diversity is not possible	20
1.4.2	Limits in case of the classical approach	21
1.4.2.1	Number of experiments in case of many factors	21
1.4.2.2	Non-linear effects and domain dependence	23
1.4.2.3	Universality of the statements	25
1.4.2.4	You desire, we play – multiple responses	26
1.4.2.5	The gain of knowledge and new information is too slow	26
1.5	Design of experiments – what's that?	27
1.5.1	Design, factors and effects	27

1.5.2	Interactions	30
1.6	Where is the statistics?	32
1.7	Models - pictures of reality	36
1.8	Overview, possibilities, benefits and limits	42
1.9	A brief history of statistical design of experiments	45
1.10	References	45
2	**Planning is essential - a lot helps a lot**	**47**
2.1	General principles for setting up a DoE investigation	47
2.1.1	Strategy of experimentation and guidelines for pre-experimental planning	47
2.1.2	Overcome experimental errors - identical replication	51
2.1.3	How to overcome trends - randomization and arrangement in blocks	51
2.1.4	Normalization, centring, orthogonal design	53
2.1.5	Not realizable, irregular combinations - the experimental region	54
2.2	Factorial designs - the heart of DoE	55
2.2.1	Two levels, two factors - 2^2-design	55
2.2.2	Two levels, three factors - 2^3-design	56
2.2.3	The general design with two levels - 2^k-design	61
2.2.4	Factorial designs with centre-points	62
2.2.5	Blocking with factorial designs	63
2.3	Fractional factorial designs - to separate the wheat from the chaff	66
2.3.1	Basic principle of the reduction - confounding	66
2.3.2	Blocking - perfect suited for the 2^{4-1}-design	69
2.3.3	Types of fractional factorial designs	71
2.3.4	Plackett-Burmann designs	72
2.3.5	DoE in colour measurement of a red-metallic base coat - 2^{6-1}-fractional factorial design	72
2.4	Non-linear effect designs	76
2.4.1	Central composite designs	77
2.4.2	Three- and higher level designs	80
2.4.3	Mixed designs	80
2.4.4	Box-Behnken designs	84
2.4.5	D-optimal designs - egg-laying wool-milk-sow	85
2.5	Mixture design - a huge area	85
2.6	Qualitative classification	88
2.7	References	93
3	**Number-crunching - nothing ventured, nothing gained in data analysis**	**94**
3.1	Evaluation of raw data	94
3.1.1	Transformation	94
3.1.2	Outliers	95
3.2	Confidence intervals - where are the limits?	95
3.3	Regression - the best model	95
3.3.1	Basic principles	95
3.3.2	Confidence intervals for the model parameters	99
3.3.3	Basic principles and standard assumptions for regression analysis	101
3.4	Residual diagnostic - what does the deviations mean?	103
3.5	Analysis of variance - how certain we can feel?	105
3.5.1	Introduction	105

3.5.2 Example: Colour measurement of a base coat - ANOVA ... 111
3.6 References ... 114

4 Parametric optimization and sensitivity analysis - finding a needle in the haystack ... 116
4.1 Strategies for optimization - how we can do it better ... 116
4.1.1 Method of the steepest ascent/descent ... 117
4.1.2 Box-Wilson's method ... 117
4.1.3 EVOP-Method (evolutionary operations) ... 117
4.1.4 Simplex-method ... 118
4.1.5 Further optimization methods ... 118
4.2 Multiple responses ... 118
Example: Multiple optimization of blocking and film formation in a clear coat ... 119
Example: Optimization of an indoor paint ... 121
4.3.1 Qualitative analysis of the response surface ... 125
Example: Disturbance in levelling of a pigmented base coat ... 125
4.3.2 Quantitative analysis of the regression model ... 129
4.3.3 Taguchi-method ... 129
Example: Micro foam in a thick-coat glaze finish ... 130
4.4 References ... 132

5 DoE-Software - do not develop the wheel once more ... 134
Autonomous commercial software-packages for DoE: ... 134
Statistic packages ... 135
EXCEL-based Software ... 135

Appendix 1 - Precision, trueness and accuracy ... 136

Appendix 2 - Location and spread parameters ... 137
Example: pH-value of a lime paint ... 138
Example: pH-value of lime paints ... 139

Appendix 3 - Normal distribution ... 141
Example: pH-value of a lime paint ... 143
References ... 145

Appendix 4 - Confidence intervals ... 146
Example: pH-value of lime paints - continuation ... 148

Appendix 5 - Hypothesis, tests and conclusions - statistical tests ... 149
Example: Picking mushrooms ... 150
Example: Comparison of two standard deviations ... 153
Example: ANOVA - comparison of two square sums ... 153
References ... 153

Appendix 6 - Three-component diagrams ... 154

Appendix 7 - Linear regression ... 155
Example: Estimation of the glass transition temperature via DSC ... 156
References ... 156

Appendix 8 – Failure mode and effect analysis, FMEA **157**
References 158

Appendix 9 – General references **159**
