1	Introduction	1
2	Fundamentals	5
2.1	Fundamentals of Video Compression	5
2.1.1	Video Formats and Representation	5
2.1.2	Principles of Hybrid Video Coding	6
2.1.3	Error Resilience	9
2.1.4	Measurement of Video Quality	10
2.2	Fundamentals of Video Streaming	12
2.3	Overview of the H.264/AVC Scalable Video Coding	14
2.3.1	Network Abstraction Layer	15
2.3.2	Video Coding Layer	18
2.3.3	Hierarchical Temporal Prediction	20
2.3.4	Quantizer Cascading	21
2.3.5	Medium Grain Scalability	24
2.3.6	Unequal Importance of the NAL Units	25
2.4	Error Concealment for SVC Bitstream	26
2.4.1	Macroblock-level Error Concealment Algorithm	27
2.4.2	Frame-level Error Concealment Algorithm	28
2.5	Analysis of the Utility of the NAL Units	33
2.5.1	Determination of the Utility of Quality BL NAL Units on Base Dependency Layer	37
2.5.2	Determination of the Utility of Quality EL NAL Units on Each Dependency Layer	38
2.5.3	Determination of the Utility of Quality BL NAL Units on Enhance- ment Dependency Layer	39
2.6	Summary	40
3	Robust Video Streaming System in Wireless Networks	41
3.1	State of the Art of Error Control Techniques	41
3.1.1	Proposed Streaming Framework Based on UEP	45
3.1.2	Priority Encoding Transmission	46
3.2	Reed-Solomon Codes	49
3.3	Modeling and Analysis of Networks	50
3.3.1	Packet Erasure Channel	50
3.3.2	Gilbert-Elliott Model	51
3.3.3	Analysis of the Probability of Successful Decoding with RS Codes over the Simplified Gilbert Model	53

3.4	Optimized Unequal Error Protection for SVC Stream	58
3.4.1	Optimization Problem	59
3.4.2	Solution Algorithms	62
3.5	Demonstrator of the Realtime Video Streaming System	78
3.6	Summary	79
4	Performance Analysis for Optimized Unicast Streaming	80
4.1	Simulation Framework	80
4.2	Test Sequences	81
4.3	Experiment Results	82
4.3.1	Comparison of the Lagrangian Relaxation Based Algorithm with the Dynamic Programming Based Algorithm	82
4.3.2	Comparison of SVC Streams to AVC Streams	89
4.3.3	Comparison of the Proposed UEP Framework with the Layer-based UEP Framework	91
4.3.4	Comparison of Two-layer MGS Streams to Multiple-layer MGS Vector Streams in the Proposed UEP Framework	94
4.3.5	Comparison of the Performance of Different Error Concealment Algorithms in the UEP Framework	99
4.3.6	Performance of the Proposed UEP Framework with Inaccurate Estimation of the Channel Conditions	101
4.3.7	Correction of the Inaccurate Estimation of Channel Conditions in the Proposed UEP Framework	104
4.3.8	Performance of the Proposed UEP Framework with Estimated Util- ities of the NAL Units	106
4.4	Summary	115
5	Performance Analysis for Optimized Multicast Streaming	117
5.1	Extension of the UEP Framework in Multicast Scenario	119
5.1.1	Block Diagram of the Regulation Entity	119
5.1.2	Multicast PET Scheme	119
5.1.3	Optimization Problem	121
5.2	Experimental Results	124
5.2.1	Results of Multicast Streaming on One Channel with MGS Quality Scalability	124
5.2.2	Results of Multicast Streaming on Multiple Channels with Spatial Scalability	129
5.3	Summary	137
6	Summary and Conclusions	139
6.1	Summary	139
6.2	Future Work	142
A	Further Results for Unicast Streaming	144
A.1	LG Algorithm vs. DP Algorithm	144
A.2	Proposed UEP Algorithm vs. Layer-based UEP Algorithm	147

A.3	SVC Streams to AVC Streams	150
A.4	Two-layer MGS Streams vs. Multiple-layer MGS Vector Streams	154
A.5	Comparison of Different Error Concealment Algorithms	158
A.6	Influence of Inaccurate Estimation of Packet Loss Rate at the Receiver Side	161
A.7	Compensated Optimal UEP for Inaccurate Channel Estimation	163
A.8	Application of the Estimated Utilities	167
B	Further Results for Multicast Streaming	169
B.1	Results of Multicast Streaming on One Channel	169
	Bibliography	172
