

Table of Contents

Introduction	1
1 Motion of a Point Mass	
1.1 Kinematics	5
1.1.1 Velocity and Acceleration	5
1.1.2 Velocity and Acceleration in Cartesian Coordinates	7
1.1.3 Rectilinear Motion	7
1.1.4 Planar Motion, Polar Coordinates	23
1.1.5 Three-Dimensional Motion, Serret-Frenet Frame	30
1.2 Kinetics	36
1.2.1 Newton's Laws	36
1.2.2 Free Motion, Projectiles	38
1.2.3 Constrained Motion	42
1.2.4 Resistance/Drag Forces	45
1.2.5 Impulse Law and Linear Momentum, Impact	52
1.2.6 Angular Momentum Theorem	58
1.2.7 Work-Energy Theorem, Potential Energy, Conservation of Energy	63
1.2.8 Universal Law of Gravitation, Planetary and Satellite Motion	72
1.3 Supplementary Examples	77
1.4 Summary	86
2 Dynamics of Systems of Point Masses	
2.1 Fundamentals	89
2.2 Linear Momentum for a System of Point Masses	94
2.3 Angular Momentum Theorem for a System of Point Mas- ses	97
2.4 Work-Energy Theorem, Conservation of Energy for a System of Point Masses	101
2.5 Central Impact	105
2.6 Bodies with Variable Mass	115
2.7 Supplementary Examples	122
2.8 Summary	127

3	Dynamics of Rigid Bodies	
3.1	Kinematics	131
3.1.1	Translation	131
3.1.2	Rotation	132
3.1.3	General Motion	135
3.1.4	Instantaneous Center of Rotation	143
3.2	Kinetics of the Rotation about a Fixed Axis	149
3.2.1	Principle of Angular Momentum	149
3.2.2	Mass Moment of Inertia	151
3.2.3	Work, Energy, Power	155
3.3	Kinetics of a Rigid Body in Plane Motion	160
3.3.1	Principles of Linear and Angular Momentum	160
3.3.2	Impulse Laws, Work-Energy Theorem and Conservation of Energy	171
3.3.3	Eccentric Impact	176
3.4	Kinetics of a Rigid Body in Three Dimensional Motion	184
3.4.1	Principles of Linear and Angular Momentum	185
3.4.2	Angular Momentum, Inertia Tensor, Euler's Equations	187
3.4.3	Support Reactions in Plane Motion	196
3.4.4	The Torque-Free Gyroscope	199
3.5	Supplementary Examples	201
3.6	Summary	210
4	Principles of Mechanics	
4.1	Formal Reduction of Kinetics to Statics	213
4.2	D'Alembert's Principle	218
4.3	Lagrange Equations of the 2nd Kind	222
4.4	Supplementary Examples	232
4.5	Summary	237
5	Vibrations	
5.1	Basic Concepts	241
5.2	Free Vibrations	244
5.2.1	Undamped Free Vibrations	244
5.2.2	Spring Constants of Elastic Systems	250
5.2.3	Damped Free Vibrations	258
5.3	Forced Vibrations	268

5.3.1	Undamped Forced Vibrations	268
5.3.2	Damped Forced Vibrations	273
5.4	Systems with two Degrees of Freedom	282
5.4.1	Free Vibrations	282
5.4.2	Forced Vibrations	291
5.5	Supplementary Examples	294
5.6	Summary	301
6	Non-Inertial Reference Frames	
6.1	Kinematics of Relative Motion	305
6.1.1	Translating Reference Frames	305
6.1.2	Translating and Rotating Reference Frames	306
6.2	Kinetics of Relative Motion	311
6.3	Supplementary Examples	318
6.4	Summary	322
7	Numerical Simulation	
7.1	Introduction	325
7.2	First-Order Initial-Value Problems	325
7.3	Second-Order Initial-Value Problems	335
7.4	Supplementary Examples	348
7.5	Summary	356
A	Numerical Integration	358
