List of Abbreviations XXIII

Part A Introduction to Spacetime Structure

1 From Aether Theory to Special Relativity
Rafael Ferraro 3

1.1 Space and Time in Classical Mechanics 4

1.2 Relativity in Classical Mechanics 6

1.3 The Theory of Light and Absolute Motion 8

1.4 Einstein's Special Relativity 13

1.5 Relativistic Mechanics..... 19

1.6 Conclusion 23

References 24

2 The Historical Origins of Spacetime
Scott Walter 27

2.1 Poincaré's Theory of Gravitation 27

2.2 Minkowski's Path to Spacetime 30

2.3 Spacetime Diagrams..... 34

References 37

3 Relativity Today
Nick M. J. Woodhouse 39

3.1 Operational Definitions 40

3.2 Lorentz Transformations in Two Dimensions 43

3.3 Inertial Coordinates in Four Dimensions 46

3.4 Vectors..... 49

3.5 Proper Time 52

3.6 Four-Acceleration 53

3.7 Visual Observation..... 54

3.8 Operational Definition of Mass 56

3.9 Maxwell's Equations 58

References 60

4 Acceleration and Gravity: Einstein's Principle of Equivalence
Lewis Ryder 61

4.1 Prologue..... 61

4.2 The Role of the Equivalence Principle in General Relativity 61

4.3 Experimental Tests 64

4.4 Relativistic Definition of Acceleration 65

4.5 Accelerating Frame in Minkowski Spacetime..... 67

4.6 Concluding Remarks 69

References 69

5	The Geometry of Newton's and Einstein's Theories	
	<i>Graham S. Hall</i>	71
5.1	Guide to Chapter	71
5.2	Geometry	72
5.3	Newtonian Mechanics I	74
5.4	Newtonian Mechanics II	75
5.5	Special Relativity	78
5.6	Absolute and Dynamical Variables; Covariance	80
5.7	General Relativity	81
5.8	Cosmology	85
	References	88
6	Time in Special Relativity	
	<i>Dennis Dieks</i>	91
6.1	The Spacetime of Prerelativistic Physics	92
6.2	The Spacetime Structure of Special Relativity	95
6.3	Philosophical Issues	103
	References	112
 Part B Foundational Issues		
7	Rigid Motion and Adapted Frames	
	<i>Stephen N. Lyle</i>	117
7.1	Rigid Rod in Special Relativity	117
7.2	Frame for an Accelerating Observer	119
7.3	General Motion of a Continuous Medium	122
7.4	Rigid Motion of a Continuous Medium	123
7.5	Rate of Strain Tensor	123
7.6	Examples of Rigid Motion	125
7.7	Rigid Motion Without Rotation	127
7.8	Rigid Rotation	128
7.9	Generalized Uniform Acceleration and Superhelical Motions	129

24.1	The Principle of Equivalence	510
24.2	Navigation Principles in the GNSS	511
24.3	Rotation and the Sagnac Effect	511
24.4	Coordinate Time and TAI	514
24.5	The Realization of Coordinate Time	516
24.6	Effects on Satellite Clocks	517
24.7	Doppler Effect	520
24.8	Relativity and Orbit Adjustments	521
24.9	Effects of Earth's Quadrupole Moment	521
24.10	Secondary Relativistic Effects	524
24.11	Conclusions	525
	References	525

25 Quasi-local Black Hole Horizons	
<i>Badri Krishnan</i>	527
25.1 Overview	527
25.2 Simple Examples	529
25.3 General Definitions and Results: Trapped Surfaces, Stability and Quasi-local Horizons.....	537
25.4 The Equilibrium Case: Isolated Horizons	541
25.5 Dynamical Horizons	551
25.6 Outlook.....	552
References	554
26 Gravitational Astronomy	
<i>B. Suryanarayana Sathyaprakash</i>	557
26.1 Background and Motivation	557
26.2 What Are Gravitational Waves?	558
26.3 Interaction of Gravitational Waves with Light and Matter	563
26.4 Gravitational Wave Detectors	566
26.5 Gravitational Astronomy	571
26.6 Conclusions	582
References	583
27 Probing Dynamical Spacetimes with Gravitational Waves	
<i>Chris Van Den Broek</i>	589
27.1 Overview	589
27.2 Alternative Polarization States	592
27.3 Probing Gravitational Self-Interaction.....	595
27.4 Testing the No Hair Theorem	603
27.5 Probing the Large-Scale Structure of Spacetime	606
27.6 Summary.....	610
References	611
 Part E General Relativity and the Universe	
28 Einstein's Equations, Cosmology, and Astrophysics	
<i>Paul S. Wesson</i>	617
28.1 Gravitation Today.....	617
28.2 Einstein's Equations	617
28.3 Cosmology	621
28.4 Astrophysics.....	624
28.5 Conclusion	626
References	627
29 Viscous Universe Models	
<i>Øyvind Grøn, Diako Darian</i>	629
