List of figures	xv
List of tables	xix
Summary	xxi
Zusammenfassung	xxv
Symbols and notation	xxix
Abbreviations	xxxv
1. Introduction	1
1.1. Optical imaging	2
1.2. Optical coherence tomography	3
1.2.1. Techniques	3
1.2.2. Applications	4
1.3. Advantages and limitations of OCT	4
1.4. New approaches	5
1.5. Holography	6
1.6. Structure of the thesis	6
2. Theory	9
2.1. The Fourier transform	9
2.1.1. The Hilbert transform and analytic signals	10
2.1.2. The discrete Fourier transform (DFT)	11
2.1.2.1. Symmetries of the DFT	12
2.1.2.2. Relation to the analytic Fourier transform	13
2.1.2.3. The fast Fourier transform (FFT)	14
2.1.3. Fourier transforms on non-equispaced nodes	15

2.1.3.1.	The non-equispaced DFT (NDFT)	15
2.1.3.2.	Interpolation and FFT (iFFT)	16
2.1.3.3.	The non-equispaced FFT (NFFT)	18
2.2.	Sampling	19
2.2.1.	Discretized signals	19
2.2.2.	The sampling theorem	19
2.2.2.1.	Aliasing	21
2.3.	Scalar waves	21
2.3.1.	Monochromatic waves	21
2.3.2.	Diffraction and propagation	22
2.3.2.1.	Diffraction and propagation in Fourier space	22
2.3.2.2.	The propagator	24
2.3.3.	Broadband light	25
2.3.3.1.	Dispersion	26
2.3.3.2.	Group and phase velocity	27
2.3.4.	Coherence	28
2.3.4.1.	Temporal coherence	29
2.4.	Coherent imaging	31
2.4.1.	Image formation	31
2.4.2.	Quadratic phase factors	33
2.4.3.	Thin lenses	33
2.4.4.	The Fresnel approximation	34
2.4.4.1.	Conjugated planes	36
2.4.4.2.	Relation to the angular spectrum	36
2.4.5.	Lateral resolution	37
2.4.5.1.	The point spread function	37
2.4.5.2.	The Rayleigh criterion	37
2.4.5.3.	The numerical aperture (NA)	38
2.4.5.4.	Gaussian beams	39
2.5.	Optical scattering theory	42
2.5.1.	The Green's function	42
2.5.2.	Born series	43
2.5.3.	The Ewald's sphere	45
2.5.3.1.	Diffraction grating	47
2.6.	Holography	48
2.6.1.	Classical holography	48
2.6.2.	Digital holography	50
2.7.	Optical coherence tomography (OCT)	50
2.7.1.	Time-domain optical coherence tomography (TD-OCT)	50
2.7.2.	Fourier-domain optical coherence tomography (FD-OCT)	51

2.7.2.1.	The axial point spread function	55
2.7.2.2.	Dispersion in FD-OCT	55
2.7.2.3.	Sensitivity advantage of FD-OCT	56
2.7.2.4.	Signal roll-off in FD-OCT	56
2.7.3.	Direct and heterodyne detection	57
2.7.3.1.	Direct detection	57
2.7.3.2.	Heterodyne detection	57
2.7.4.	Scanning OCT	58
2.7.4.1.	Confocal gating	58
2.7.5.	Full-field OCT	60
3.	FD-OCT signal processing using the NFFT	63
3.1.	The chirped FD-OCT signal	63
3.2.	Calibration	64
3.2.1.	Calibration in presence of GVD mismatch	65
3.3.	Materials and methods	68
3.3.1.	The algorithms	68
3.3.2.	Simulation	68
3.3.3.	Measured data	69
3.3.4.	Signal processing	70
3.4.	Results and discussion	70
3.4.1.	Processing speed	70
3.4.2.	Image quality with simulated data	71
3.4.3.	Image quality with measured data	73
4.	Motion and dispersion correction in FD-OCT	83
4.1.	Introduction	83
4.1.1.	Doppler effect on axial motion in swept-source OCT	84
4.1.2.	Dispersion in FD-OCT	85
4.2.	Effect and correction of motion and GVD mismatch	86
4.3.	Determination of the correcting phase function	87
4.3.1.	Cross-correlation of sub-bandwidth reconstructions	87
4.4.	Materials and methods	91
4.4.1.	Implementation	91
4.4.2.	Full-field FD-OCT setup for axial motion experiments	93
4.4.3.	FD-OCT setup for GVD mismatch experiments	94
4.5.	Results and discussion	94
4.5.1.	Axial motion in full-field SS-OCT	94
4.5.2.	GVD mismatch in FD-OCT	97

5. Hologscopy	103
5.1. Sensitivity improvement of hologscopy	103
5.2. Basic setup	105
5.3. Theory of hologscopy	105
5.3.1. The intensity distribution on the camera	105
5.3.2. The phase-corrected propagator, object and reference field	109
5.3.3. Obtaining the phase-corrected object wave field	111
5.3.3.1. Reducing the DC signals	111
5.3.3.2. On-axis geometry	112
5.3.3.3. Off-axis geometry	113
5.4. Reconstruction	121
5.4.1. Reconstruction of one Rayleigh length	121
5.4.2. One-step reconstruction	122
5.4.2.1. In free space	122
5.4.2.2. In a medium	123
5.4.2.3. With numerical magnification	124
5.4.2.4. The complete reconstruction integral	126
5.4.3. Resolution	129
5.4.3.1. Axial resolution	129
5.4.3.2. Lateral resolution	129
5.4.4. The Ewald's sphere in hologscopy	130
5.4.4.1. Relation between scattering theory and one-step hologscopy reconstruction	131
5.5. Setup considerations	132
5.5.1. Restrictions on the lens-less setup by the Nyquist criterion	132
5.5.2. Considerations with imaging optics	137
5.5.2.1. Reconstruction with a simulated lens	137
5.5.2.2. Lens-less reconstruction	139
5.6. Materials and methods	142
5.6.1. Implementation	142
5.6.1.1. Numerical complexity and execution speed	142
5.6.2. Calibration	144
5.6.3. Setup	145
5.6.3.1. Lens-less hologscopy	145
5.6.3.2. High-resolution hologscopy	146
5.7. Results	146
5.7.1. Lens-less hologscopy	146
5.7.2. High-resolution hologscopy	148
5.7.3. Artifacts in hologscopic imaging	148
5.7.3.1. Autocorrelation artifacts	148

5.7.3.2. Multiple scattering	150
5.7.3.3. Horizontal lines	152
6. Conclusion	153
6.1. FD-OCT signal processing using the NFFT	153
6.2. Motion and dispersion	154
6.3. Holography	155
6.4. Outlook	155
A. Mathematical supplements	157
A.1. Definitions	157
A.2. Useful identities	159
A.3. The Fourier transform	159
A.3.1. Properties of the Fourier transform	159
A.3.2. Important Fourier transforms	161
A.3.3. The uncertainty relation of Fourier analysis	162
A.4. Complex analysis	164
A.4.1. Residual theorem	165
A.4.2. Jordan's lemma	166
B. Resolution in signal processing and optics	167
B.1. Apodization windows	167
B.1.1. Rectangular window	167
B.1.2. Hann window	168
B.1.3. Ideal Gaussian window and OCT resolution	169
B.1.4. Truncated Gaussian window	170
B.1.5. Comparison of window functions	171
B.2. Lateral resolution of an imaging system	171
B.2.1. Circular aperture	171
B.2.2. Rectangular aperture	173
B.2.3. Gaussian beams	175
C. Discretization of the reconstruction	179
C.1. General considerations	179
C.1.1. Sampling theorem for discretization of analytical functions	179
C.1.2. Bandwidth of a convolution	181
C.1.3. Zero padding	181
C.2. The acquired image and wave fields	182
C.2.1. Obtaining the object wave-field	182
C.2.2. Time-frequency filter	183

C.2.3. Removing the reference wave field	183
C.2.4. Spatial filter	184
C.3. The angular spectrum	186
C.3.1. Propagation	187
C.4. Reconstruction	187
C.4.1. Single reconstruction	187
C.4.2. Complete one-step reconstruction	188
