Part I Tensor Data Visualization

Top Challenges in the Visualization of Engineering Tensor Fields	3
Mario Hlawitschka, Ingrid Hotz, Andrea Kratz, G. Elisabeta Marai, Rodrigo Moreno, Gerik Scheuermann, Markus Stommel, Alexander Wiebel, and Eugene Zhang	
1 Introduction	4
2 Mathematical Models	5
3 Relevant Quantities and Terminology	5
4 Effective Visual Abstractions	6
5 Scalability: Very Large Datasets	8
6 Scalability: Multi-field Datasets	8
7 Scalability: Details in Context	9
8 Integration of Visualization with Simulation and Modeling	10
9 Interpolation and Smoothing	11
10 Uncertain Data	12
11 Data Repositories	12
12 Tool Repositories	13
13 Conclusion	13
References	14
Tensor Invariants and Glyph Design	17
Andrea Kratz, Cornelia Auer, and Ingrid Hotz	
1 Introduction	17
2 Basics and Notations	18
3 Tensors in Mechanical Engineering	19
4 Tensor Invariants	21
4.1 Shape Space	21
4.2 Basis Defined by Tensor Invariants	22
5 Glyphs in Tensor Visualization	23

6	Invariant Sets and Their Glyphs	24
6.1	Eigenvalues	24
6.2	Principal Invariants and Trace Invariants	26
6.3	Tensor-Norm and Shape	26
6.4	Invariant Sets for Stress Tensors	28
6.5	Invariant Set of the Natural Strain	32
7	Summary	32
	References	33

Part II Representation and Processing of Higher-Order Descriptors

	Monomial Phase: A Matrix Representation of Local Phase	37
	Hans Knutsson and Carl-Fredrik Westin	
1	Background	38
1.1	Traditional 1-Dimensional Signal Processing Concepts	39
2	Phase Representation for Multi-dimensional Signals	46
2.1	General Representational Considerations	46
2.2	Monomial Filters	46
2.3	Monomial Filter Response Matrices	48
2.4	Signal Classes	48
2.5	Vector Phase Representations	50
2.6	Relations to Previous Work	51
3	Higher Order Phase Representations	54
3.1	Local Phase from Orders 0, 1, and 2	55
3.2	A Matrix Representation of Phase	58
3.3	The Phase Space Manifold Is a Klein Bottle	58
4	Monomial Phase Products and Phase Angle Differences	59
4.1	Direct Products of Phase Matrices	61
4.2	A Symmetric Complex Conjugate Phase Product	62
4.3	Monomial Phase and Motion Estimation	66
4.4	Averaging of Phase Matrix Products	67
5	Conclusion	71
	References	72
	Order Based Morphology for Color Images via Matrix Fields	75
	Bernhard Burgeth and Andreas Kleefeld	
1	Introduction	76
2	A Glance at Scalar Morphology	77
3	Loewner Order: Maximal and Minimal Matrices	79
4	Color Images as Matrix Fields	81
5	Experimental Results	83
6	Summary and Future Work	93
	References	94

Sharpening Fibers in Diffusion Weighted MRI via Erosion	97
Thomas C.J. Dela Haije, Remco Duits, and Chantal M.W. Tax	
1 Introduction	97
1.1 Diffusion Weighted MRI.....	98
1.2 Enhancement and Tractography	98
1.3 Sharpening.....	99
1.4 Outline of the Article.....	100
2 Interpreting the Data	100
2.1 The Group Structure and Euclidean-Invariance.....	101
2.2 Operator Legality.....	103
2.3 The Moving Frame of Reference	105
2.4 Legal Metrics	107
2.5 Overview.....	108
3 Erosion	109
3.1 Erosion Towards Fibers	110
3.2 Minimum Reduction	111
3.3 Approximating Solutions	113
4 Preprocessing with Erosion.....	115
5 Conclusion	118
Parametrization of the Special Euclidean Group.....	120
The Logarithmic Map	122
Finite Difference Schemes	123
References	124

Part III Higher Order Tensors and Riemannian-Finsler Geometry

Higher-Order Tensors in Diffusion Imaging	129
Thomas Schultz, Andrea Fuster, Aurobrata Ghosh, Rachid Deriche, Luc Florack, and Lek-Heng Lim	
1 Introduction	130
2 Overview of Higher-Order Tensor Models in dMRI	130
3 Mathematical Background.....	133
3.1 Basic Definitions	133
3.2 Tensor Algebra and Homogeneous Polynomials	135
3.3 Homogeneous Polynomials and Spherical Harmonics	138
3.4 Tensor Decompositions and Approximations.....	139
3.5 Eigenvectors and Eigenvalues	140
4 Fitting Higher-Order Tensor Models.....	141
4.1 Fitting Models of Apparent Diffusivity	141
4.2 Fitting Models of Apparent Diffusional Kurtosis.....	144
4.3 Fitting Deconvolution-Based Models	145
4.4 Fitting Other Types of Models.....	146
5 Processing Higher-Order Tensors in Diffusion MRI	147
5.1 Computing Rotationally Invariant Scalar Measures	147
5.2 Reconstructing the Diffusion Propagator	151

5.3	Finding Maxima of the Homogeneous Form	152
5.4	Applications of Tensor Decompositions and Approximations	152
5.5	Finslerian Tractography	153
5.6	Registration and Atlas Construction	153
6	Conclusion	154
	References	155
	Fourth Order Symmetric Tensors and Positive ADC Modeling	163

2	A Riemannian Approach for Symmetric Positive Definite Fourth Order Diffusion Tensors	166
2.1	Algebra of Second Order Tensors	166
2.2	Algebra of Fourth Order Tensors	168
2.3	Estimating a SPD Fourth Order Diffusion Tensor	172
3	A Ternary Quartic Approach for Symmetric Positive Semi-definite Fourth Order Diffusion Tensors	173
3.1	Riemannian vs. Ternary Quartics: A Comparison	174
3.2	Hilbert's Theorem on Non-negative Ternary Quartics	175
3.3	Estimating a SPSD Fourth Order Diffusion Tensor	176
4	Experiments and Results	180
4.1	Synthetic Dataset	180
4.2	Biological Phantom Dataset	180
4.3	In Vivo Human Dataset	182
5	Discussion and Conclusion	185
	References	186
	Riemann-Finsler Geometry for Diffusion Weighted Magnetic Resonance Imaging	189
	Luc Florack and Andrea Fuster	
1	Introduction	189
2	Theory	191
2.1	Diffusion Weighted MRI	191
2.2	The Riemannian Paradigm	192
2.3	The Finsler Function	194
2.4	Riemann-Finsler Geometry and Its Riemannian Limit	196
2.5	Connections in Riemann-Finsler Geometry	196
2.6	Horizontal-Vertical Splitting	198
2.7	Horizontal Curves and Finsler Geodesics	199
2.8	Lagrangian Versus Hamiltonian Frameworks	200
2.9	Indicatrix and Figuratrix	201
2.10	Covariant Derivatives	202
3	Conclusion and Discussion	203
	Appendix: Horizontal and Vertical Splitting	204
	References	205

Riemann-Finsler Multi-valued Geodesic Tractography for HARDI	209
Neda Sepasian, Jan H.M. ten Thijs Boonkcamp, Luc M.J. Florack, Bart M. Ter Haar Romeny, and Anna Vilanova	
1 Introduction	210
2 Finsler Metric	212
3 Geodesic Equations for the Finsler Metric	214
4 Numerical Model	218
5 Results	221
6 Conclusion	223

Part IV Tensor Signal Processing

Kernel-Based Morphometry of Diffusion Tensor Images	229
Madhura Ingahlalikar, Parmeshwar Khurd, and Ragini Verma	
1 Introduction	230
2 Kernel Based Approach to Group-Wise Voxel Based DTI Statistical Analysis	231
3 Kernel Principal Component Analysis (kPCA)	233
4 kPCA Based kFDA	236
5 Application	237
5.1 Kernel Based Analysis of Simulated Datasets	237
5.2 Analysis of DTI Datasets with Simulated Changes	238
5.3 kPCA Analysis on Autism Spectrum Disorder	240
6 Summary	241
References	245
The Estimation of Free-Water Corrected Diffusion Tensors	249
Ofer Pasternak, Klaus Maier-Hein, Christian Baumgartner, Martha E. Shenton, Yogesh Rathi, and Carl-Fredrik Westin	
1 Introduction	249
2 The Free-Water Model	251
2.1 Free-Water Derived Maps	252
3 Fitting the Free-Water Model	252
3.1 Single Shell (DTI) Data	252
3.2 Multi-shell Free-Water Estimation	254
3.3 Single- and Multi-shell Comparison	255
4 Estimation via Filtered Tractography	256
4.1 State-Space Representation	257
4.2 Unscented Kalman Filter	257
4.3 Free-Water and Tensor Corrected Maps Following Filtered Tractography	259
5 Free Water and Group Comparisons	261
5.1 Partial Volume Clustering	262

6	Partial Volume and Free-Water in the Corpus Callosum of Alzheimer's Disease	263
6.1	Data Acquisition.....	263
6.2	Partial Volume Clustering Versus TBSS	264
6.3	Sensitivity to Abnormalities in Alzheimer's Disease	265

2	Mechanics-Based Methods	273
2.1	Solid Mechanics Approach	273
2.2	Wave Propagation Approach.....	274
3	Morphology-Based Methods	275
3.1	Boundary-Based Methods	275
3.2	Volume-Based Methods.....	278
3.3	Texture-Based Methods	280
3.4	Alternative Methods.....	283
4	Relations Between Morphology-Based Fabric Tensors and Mechanics...	284
5	Concluding Remarks.....	286
	References	287
	Part V Applications of Tensor Processing	
	Tensors in Geometry Processing	295
	Eugene Zhang	
1	Introduction	295
2	Metric Tensor	296
3	Curvature Tensor	300
3.1	Non-photorealistic Rendering	304
3.2	Quadrangular and Triangular Remeshing	308
4	Conclusion	309
	References	309
	Preliminary Findings in Diagnostic Prediction of Schizophrenia	
	Using Diffusion Tensor Imaging	313
	Yogesh Rathi, Martha E. Shenton, and Carl-Fredrik Westin	
1	Introduction	314
2	Methods	315
2.1	Preliminaries.....	315
2.2	Probabilistic Representations	316
2.3	Parzen Window Classifier.....	318
3	Results.....	321
3.1	Data Acquisition Protocol	321

4	Classification Results	321
4.1	Leave-One-Out Cross-Validation	321
5	Discussion	323
	References	323

A System for Combined Visualization of EEG and Diffusion

Tensor Imaging Tractography Data	325
---	------------

Alexander Wiebel, Cornelius Müller, Christoph Garth,
and Thomas R. Knösche

1	Introduction	326
1.1	Related Work	326
2	Preprocessing	329
2.1	DTI Tractography	329
2.2	EEG Source Reconstruction	329
3	Technique	330
3.1	Visualization	330
3.2	Navigation	331
3.3	Combination	333
4	Implementation Details	334
5	Conclusion	335
