

Part I Linear Parameter-Varying Systems

1	Introduction to LPV Systems	3
1.1	System Definition	3
1.2	Types of Parameters	5
1.2.1	Approximating Nonlinear Systems: Quasi-LPV Systems	5
1.2.2	Embedding Time-Varying Components: Intrinsic Parameters	8
1.2.3	Artificial/Extrinsic Parameters	9
1.3	Representation of LPV Systems	9
1.3.1	Generic LPV Systems	10
1.3.2	Polytopic LPV Systems	11
1.3.3	LPV Systems in LFT-Form	16
1.3.4	LPV Systems in Input/Output Form	18
1.4	Examples	18
1.4.1	Inverted Pendulum: Robust Control and Performance	19
1.4.2	LPV Model for a Web Service System	20
1.4.3	LPV Models for Aperiodic Sampled-Data Systems	22
1.4.4	Automotive Suspension System	23
1.4.5	A Wide Range of Applications	26
1.5	Control, Observation and Filtering of LPV Systems	26
1.5.1	Observation and Filtering of LPV Systems	27
1.5.2	Control of LPV Systems	28
	References	30

2	Stability of LPV Systems	37
2.1	Chapter Outline	37
2.2	General Notions of Stability for Dynamical Systems	38
2.2.1	General Stability and Instability Results	39
2.2.2	The LTI System Case	41
2.3	Stability Notions for LPV and Uncertain Systems	43
2.3.1	Quadratic Stability	44
2.3.2	Robust Stability	46
2.3.3	Stability with Brief Instabilities	49
2.3.4	Other Types of Lyapunov Functions	49
2.4	Stability of Generic LPV Systems	51
2.4.1	Quadratic Stability	51
2.4.2	Robust Stability	55
2.5	Stability of Polytopic LPV Systems	56
2.5.1	Quadratic Stability	56
2.5.2	Robust Stability	57
2.6	Stability of LPV Systems in LFT-Form	62
2.6.1	L_2 -Norm and H_∞ -Norm	63
2.6.2	Small-Gain Theorem	65
2.6.3	Constant D-Scalings and the Scaled-Small Gain Theorem	68
2.6.4	Frequency-Dependent D-Scalings	70
2.6.5	Full-Block S-Procedure	72
2.6.6	Topological and Quadratic Separation	76
2.6.7	Integral Quadratic Constraints Analysis	84
	References	88
3	Control of LPV Systems	93
3.1	Gain-Scheduling: The LPV Way	93
3.2	Types of Controllers	94
3.2.1	Gain-Scheduled State-Feedback	95
3.2.2	Gain-Scheduled Static-Output-Feedback	95
3.2.3	Gain-Scheduled Dynamic-Output-Feedback	96
3.3	Generic Parameter Dependent Systems	96
3.3.1	Quadratic Stabilization by State-Feedback	97
3.3.2	Quadratic Stabilization by Dynamic-Output Feedback	101
3.3.3	Robust Stabilization by State-Feedback	104
3.3.4	Robust Stabilization by Dynamic-Output Feedback	105
3.4	Polytopic LPV Systems	107
3.4.1	Quadratic Stabilization by State-Feedback	107
3.4.2	Robust Stabilization by State-Feedback	108

3.5	LPV Systems in LFT-Form	109
3.5.1	Quadratic Stabilization by State-Feedback	111
3.5.2	Quadratic Stabilization by Dynamic Output-Feedback	115
	References	118

Part II Time-Delay Systems

4	Introduction to Time-Delay Systems	123
4.1	Representation of Time-Delay Systems	123
4.1.1	Functional Differential Equations	123
4.1.2	Differential Equation with Coefficients in a Ring of Operators	124
4.1.3	Abstract Representation Over an Infinite Dimensional Linear Space	124
4.2	Bestiary of Time-Delay Systems and Delays	125
4.2.1	Types of Time-Delay Systems	125
4.2.2	Families of Delays	129
4.3	Examples	131
4.3.1	Delays in Biological Reaction Networks	131
4.3.2	Aperiodic Sampled-Data Systems	134
4.3.3	Delay-SIR Model	136
4.3.4	Neutral Pearl-Verhulst Equation and Ecology	139
4.3.5	Networks and Congestion Control Modeling	140
4.4	Control, Observation and Filtering of Time-Delay Systems	148
4.4.1	Observation and Filtering	149
4.4.2	Control	151
	References	155
5	Stability Analysis of Time-Delay Systems	165
5.1	Chapter Outline	165
5.2	General Notions of Stability for Time-Delay Systems	166
5.2.1	Definitions	166
5.2.2	General Stability and Instability Results	167
5.2.3	LTI System Case	173
5.3	Delay-Related Notions of Stability	174
5.3.1	Delay-Independent Stability	175
5.3.2	Delay-Dependent and Delay-Range Stability	176
5.3.3	Time-Varying Delays and the Quenching Phenomenon	178

5.4	Model Transformations, Comparison Systems and Additional Dynamics	179
5.4.1	Newton-Leibniz Model Transformation	179
5.4.2	Parametrized Newton-Leibniz Model Transformation	181
5.4.3	Descriptor Model Transformation.	182
5.4.4	Other Model Transformations	183
5.5	Lyapunov-Razumikhin Stability Results	183
5.5.1	Delay-Independent Stability	184
5.5.2	Delay-Dependent Stability.	185
5.6	Lyapunov-Krasovskii Stability Results	187
5.6.1	Delay-Independent Stability	188
5.6.2	Delay-Dependent Stability—Newton-Leibniz Model Transformation	191
5.6.3	Delay-Dependent Stability—Parametrized Newton-Leibniz Model Transformation	193
5.6.4	Delay-Dependent Stability—Park's Inequality	194
5.6.5	Delay-Dependent Stability—Descriptor Model Transformation	200
5.6.6	Delay-Dependent Stability—Method of Free-Weighting Matrices	203
5.6.7	Delay-Dependent Stability—Jensen's Inequality	205
5.6.8	Fragmented Lyapunov-Krasovskii Functional	212
5.6.9	Delay-Dependent Stability—Wirtinger's Inequality	213
5.7	L_2 Scaled Small-Gain Theorem Based Results.	217
5.7.1	Delay Operators.	217
5.7.2	Delay-Independent Stability	221
5.7.3	Delay-Dependent Stability.	222
5.7.4	Final Remarks	223
5.8	QL_∞ Scaled Small-Gain Theorem Based Results.	223
5.8.1	*-Bounded Real Lemma and QL_∞ Scaled Small-Gain Theorem	224
5.8.2	Norms of Delay-Operators	227
5.8.3	Delay-Independent Stability	228
5.8.4	Delay-Dependent Stability.	229
5.9	Integral Quadratic Constraints	231
5.9.1	Delay-Independent Stability	231
5.9.2	Delay-Dependent Stability.	232
5.10	Quadratic Separation	234
5.10.1	Preliminary Results	234
5.10.2	Delay-Independent Stability	235
5.10.3	Delay-Dependent Stability.	236
	References	237

Part III Linear Parameter-Varying Time-Delay Systems

6	Introduction to LPV Time-Delay Systems	245
6.1	Representation of LPV Time-Delay Systems	245
6.1.1	Coupling Between Delays and Parameters	246
6.2	Examples	247
6.2.1	Milling Process	247
6.2.2	LPV Control of a System with Input Delay	248
6.2.3	Approximation of State-Dependent Delay Systems	250
6.2.4	LPV Model of a Marine Cooling System	251
6.2.5	Other Applications	254
6.3	Stability Results for LPV Time-Delay Systems	255
6.3.1	Case of Parameter-Dependent Delay	260
6.3.2	Case of Delayed Parameters	261
	References	262
7	Observation and Filtering of LPV Time-Delay Systems	265
7.1	Observation of LPV Time-Delay Systems	265
7.1.1	Observer with Exact Memory	266
7.1.2	Examples	271
7.1.3	Memoryless Observer	276
7.1.4	Examples	279
7.2	Simple Observers for LPV Time-Delay Systems	281
7.2.1	Observer with Exact-Memory	281
7.2.2	Memoryless Observer	282
7.3	Filtering of LPV Time-Delay Systems	284
7.3.1	Filter with Exact Memory	285
7.3.2	Memoryless Filter	287
7.3.3	Examples	288
	References	291
8	Control of LPV Time-Delay Systems	293
8.1	State-Feedback Controllers	293
8.1.1	Delay-Independent Stabilization—Generic Case	294
8.1.2	Delay-Dependent Stabilization—Generic Case	296
8.1.3	Delay-Independent Stabilization—LFT Case	307
8.1.4	Delay-Dependent Stabilization—LFT Case	311
8.1.5	Further Remarks on LFT-Based Approaches	315
8.2	Observer-Based Output Feedback Controllers	315
8.2.1	Memoryless Observer-Based Output Feedback	316
8.2.2	Observer-Based Output Feedback with Exact Memory	323

8.3	Dynamic Output-Feedback Controllers	327
8.3.1	Dynamic Output Feedback with Exact Memory	327
8.3.2	Memoryless Dynamic Output Feedback	332
