

Contents

1	A Literature Survey on Differential Evolution.....	1
1.1	Motivations.....	1
1.1.1	Eliminating Inconsistencies	1
1.1.2	Crediting Original Contributions	1
1.1.3	Knowing the State of the Art	1
1.1.4	Gaining Insight	2
1.2	Platforms.....	2
1.2.1	Starting Point	2
1.2.2	Databases	3
1.2.3	Informal Online Resources and Tools	4
1.3	Result Refining	5
1.3.1	Books	5
1.3.2	Book Chapters	6
1.3.3	Other Formal Publications	6
1.3.4	Informal Notes	7
1.4	Result Analysis	7
1.4.1	Theory of Differential Evolution	7
1.4.2	Fundamentals of Differential Evolution	8
1.4.3	Intrinsic Control Parameters	9
1.4.4	Evaluation of Differential Evolution.....	9
1.4.5	Applications of Differential Evolution	9
1.4.6	Hybridization	9
1.5	Future Actions	10
1.5.1	Open Access	10
1.5.2	Future Update	10
1.6	Misconceptions and Misconducts on Differential Evolution.....	10
	References	10
2	Basics of Differential Evolution.....	19
2.1	A Short History.....	19
2.1.1	Inception	19
2.1.2	Early Years	20
2.1.2.1	Assessment.....	20
2.1.2.2	Reputation Building	20

2.1.2.3	Applications	20
2.1.2.4	Promotion.....	21
2.1.2.5	Practical Advice.....	21
2.1.2.6	Standardization	22
2.1.2.7	More Adventures	22
2.1.3	Key Milestones in and after 1998	22
2.2	The Foundational Differential Evolution Strategies	23
2.2.1	Notations.....	23
2.2.2	Strategy Framework.....	24
2.2.2.1	Pseudo-code	24
2.2.2.2	Initialization	25
2.2.2.3	Differential Mutation	25
2.2.2.4	Crossover	26
2.2.2.5	Selection.....	27
2.2.2.6	Termination Conditions	27
2.2.3	Intrinsic Control Parameters	27
2.3	Classic Differential Evolution	28
2.3.1	Initialization	28
2.3.2	Differential Mutation	28
2.3.2.1	Current	29
2.3.2.2	Best	29
2.3.2.3	Better.....	29
2.3.2.4	Random.....	29
2.3.2.5	Mean	29
2.3.2.6	Best of Random	29
2.3.2.7	Arithmetic Best	29
2.3.2.8	Arithmetic Better	29
2.3.2.9	Arithmetic Random.....	29
2.3.2.10	Trigonometric	30
2.3.2.11	Directed.....	30
2.3.3	Crossover.....	30
2.3.3.1	Binary Crossover	31
2.3.3.2	One-Point Crossover.....	32
2.3.3.3	Multi-point Crossover.....	32
2.3.3.4	Arithmetic Crossover	32
2.3.3.5	Arithmetic One-Point Crossover.....	33
2.3.3.6	Arithmetic Multi-point Crossover.....	33
2.3.3.7	Arithmetic Binomial Crossover	34
2.3.3.8	Arithmetic Exponential Crossover.....	35
2.4	Dynamic Differential Evolution	36
2.5	State of the Art of Differential Evolution	36
2.6	Essential Features of Differential Evolution	37
2.6.1	Advantages	37
2.6.1.1	Reliability.....	37
2.6.1.2	Efficiency.....	37

2.6.1.3	Simplicity.....	37
2.6.1.4	Robustness	38
2.6.2	Disadvantages	38
2.6.2.1	Efficiency.....	38
2.6.2.2	Incapability for Epistatic and Noisy Problems.....	38
References		38
3	A Retrospective of Differential Evolution in Electromagnetics.....	43
3.1	Introduction	43
3.1.1	Coverage	43
3.1.2	Pioneering Works	44
3.1.3	An Overview of Applications of Differential Evolution in Electromagnetics.....	44
3.1.3.1	Yearly Output	44
3.1.3.2	Output by Subject	44
3.2	Electromagnetic Inverse Problems	45
3.2.1	A Bird's Eye View.....	45
3.2.2	Further Classification.....	45
3.2.2.1	One-Dimensional Electromagnetic Inverse Problems	46
3.2.2.2	Two-Dimensional Electromagnetic Inverse Problems	46
3.2.2.3	Three-Dimensional Electromagnetic Inverse Problems	47
3.3	Antenna Arrays.....	48
3.3.1	Conventional Antenna Arrays.....	48
3.3.1.1	Ideal Antenna Arrays	48
3.3.1.2	Practical Antenna Arrays	48
3.3.1.3	Phased Arrays	49
3.3.2	Time-Modulated Antenna Arrays	49
3.3.2.1	Ideal Antenna Arrays with Time Modulation	49
3.3.2.2	Practical Antenna Arrays with Time Modulation	49
3.3.2.3	Phased Antenna Arrays with Time Modulation.....	50
3.3.3	Moving Phase Center Antenna Arrays.....	50
3.4	Microwave and RF Engineering	50
3.4.1	Design of Microwave and RF Devices	50
3.4.1.1	Designing Microwave and RF Devices Using Differential Evolution	51
3.4.1.2	Extracting Empirical Synthesis Formulas Using Differential Evolution	51
3.4.2	Characterization of Microwave and RF Devices	51
3.4.2.1	Calibration of Measuring System for Characterizing Microwave and RF Devices	51
3.4.2.2	Modeling of Microwave and RF Devices	52
3.5	Antennas	52
3.5.1	Design of Antennas.....	52

3.5.1.1	Designing Antennas Using Differential Evolution	52
3.5.1.2	Extracting Empirical Formulas for Synthesizing Antennas	52
3.5.2	Measurement of Antennas	53
3.6	Electromagnetic Structures	53
3.6.1	Plain Electromagnetic Structures	54
3.6.2	Frequency Selective Surfaces	55
3.7	Electromagnetic Composite Materials	56
3.7.1	Modeling of Electromagnetic Composite Materials	56
3.7.2	Retrieval of Effective Permittivity Tensor	56
3.8	Frequency Planning	57
3.9	Radio Network Design	58
3.10	MIMO	58
3.11	Radar	59
3.12	Computational Electromagnetics	59
3.13	Electromagnetic Compatibility	60
3.14	Miscellaneous Applications	60
3.15	An Outlook to Future Applications of Differential Evolution in Electromagnetics	60
