1	Energy Release in Nuclear Reactions, Neutrons, Fission, and Characteristics of Fission	1
1.1	Notational Conventions for Mass Excess and Q -Values	1
1.2	Rutherford and the Energy Release in Radium Decay	3
1.3	Rutherford's First Artificial Nuclear Transmutation	5
1.4	Discovery of the Neutron	6
1.5	Artificially-Induced Radioactivity and the Path to Fission	14
1.6	Energy Release in Fission	19
1.7	The Bohr–Wheeler Theory of Fission: The Z^2/A Limit Against Spontaneous Fission	20
1.8	Energy Spectrum of Fission Neutrons	26
1.9	Leaping the Fission Barrier	29
1.10	A Semi-Empirical Look at the Fission Barrier	34
1.11	A Numerical Model of the Fission Process	38
1.11.1	Volume and Surface Areas; Volume Conservation	40
1.11.2	Surface and Coulomb Energies	43
1.11.3	Results	45
	References	47
2	Critical Mass and Efficiency	49
2.1	Neutron Mean Free Path	50
2.2	Critical Mass: Diffusion Theory	55
2.3	Effect of Tamper	63
2.4	Estimating Bomb Efficiency: Analytic	69
2.5	Estimating Bomb Efficiency: Numerical	81
2.5.1	A Simulation of the Hiroshima Little Boy Bomb	83
2.6	Another Look at Untamped Criticality: Just One Number	86
2.7	Critical Mass of a Cylindrical Core (Optional)	89
	References	96

3	Producing Fissile Material	97
3.1	Reactor Criticality	97
3.2	Neutron Thermalization	101
3.3	Plutonium Production	104
3.4	Electromagnetic Separation of Isotopes	107
3.5	Gaseous (Barrier) Diffusion	113
	References	119
4	Complicating Factors	121
4.1	Boron Contamination in Graphite	121
4.2	Spontaneous Fission of ^{240}Pu , Predetonation, and Implosion	124
4.2.1	Little Boy Predetonation Probability	128
4.2.2	Fat Man Predetonation Probability	129
4.3	Predetonation Yield	132
4.4	Tolerable Limits for Light-Element Impurities	139
	References	143
5	Miscellaneous Calculations	145
5.1	How Warm Is It?	145
5.2	Brightness of the <i>Trinity</i> Explosion	146
5.3	A Model for Trace Isotope Production in a Reactor	151
	References	156
6	Appendices	157
6.1	Appendix A: Selected Δ -Values and Fission Barriers	157
6.2	Appendix B: Densities, Cross-Sections, Secondary Neutron Numbers, and Spontaneous-Fission Half-Lives	158
6.2.1	Thermal Neutrons (0.0253 eV)	158
6.2.2	Fast Neutrons (2 MeV)	158
6.3	Appendix C: Energy and Momentum Conservation in a Two-Body Collision	159
6.4	Appendix D: Energy and Momentum Conservation in a Two-Body Collision That Produces a Gamma-Ray	162
6.5	Appendix E: Formal Derivation of the Bohr–Wheeler Spontaneous Fission Limit	164
6.5.1	Introduction	164
6.5.2	Nuclear Surface Profile and Volume	165
6.5.3	The Area Integral	170
6.5.4	The Coulomb Integral and the SF Limit	171
6.6	Appendix F: Average Neutron Escape Probability from Within a Sphere	179
6.7	Appendix G: The Neutron Diffusion Equation	184
6.8	Appendix H: Exercises and Answers	192
6.9	Appendix I: Glossary of Symbols	203

6.10	Appendix J: Further Reading	209
6.10.1	General Works	209
6.10.2	Biographical and Autobiographical Works	211
6.10.3	Technical Works	213
6.10.4	Websites	215
6.11	Appendix K: Useful Constants and Rest Masses	217
	References	217
