

Contents

List of Contributors *XIII*

Preface *XIX*

- 1 The Astrophysical Background** *1*
Malcolm Walmsley
- 1.1 The Contents of this Volume** *8*
References *11*

- 2 Molecular Spectroscopy** *13*
Thomas Giesen
- 2.1 Electronic Spectroscopy of Potential Carriers of Diffuse Interstellar Bands** *15*
Corey A. Rice and John P. Maier
- 2.1.1 Introduction** *15*
- 2.1.2 Laboratory Methods** *16*
- 2.1.2.1 Resonant Two-Color Two-Photon Ionization** *17*
- 2.1.2.2 Resonant Two-Color Photodetachment** *17*
- 2.1.2.3 Resonant Two-Color, Two-Photon Fragmentation** *17*
- 2.1.2.4 Cavity Ringdown Spectroscopy** *18*
- 2.1.2.5 Four-Wave Mixing Technique** *18*
- 2.1.2.6 Laser-Induced Fluorescence** *18*
- 2.1.3 Species of Astrophysical Interest** *19*
- 2.1.3.1 Molecular Ions** *19*
- 2.1.3.2 Bare Carbon Chains** *22*
- 2.1.3.3 Metal-Containing Carbon Chains** *24*
- 2.1.4 Outlook** *28*
Acknowledgments *29*
- 2.2 UV-Vis Gas-Phase Absorption Spectroscopy of PAHs** *29*
Yvain Carpentier, Gaël Rouillé, Mathias Steglich, Cornelia Jäger, Thomas Henning, and Friedrich Huisken
- 2.2.1 Introduction** *29*
- 2.2.2 Experimental** *32*
- 2.2.2.1 Supersonic Jet Cavity Ringdown Spectrometer** *32*

2.2.2.2	Matrix-Isolation Spectroscopy	35
2.2.3	Data Analysis	36
2.2.3.1	Derivation of Absorption Cross Sections	36
2.2.3.2	Extrapolation of Gas-Phase Transitions from MIS Data	39
2.2.4	Results and Discussion	40
2.2.5	Conclusion	48
	Acknowledgments	49
2.3	Laboratory IR Spectroscopy of PAHs	49
	<i>Jos Oomens, Olivier Pirali, and Alexander G.G.M. Tielens</i>	
2.3.1	Introduction	49
2.3.2	Laboratory Spectroscopic Methods	52
2.3.2.1	Neutral PAHs	53
2.3.2.2	Cationic PAHs	54
2.3.2.3	Computational	58
2.3.2.4	Comparison of Experimental Methods	58
2.3.3	Far-Infrared Spectroscopy	60
2.3.3.1	Laboratory Results	61
2.3.4	IR Spectral Features of PAHs	63
2.3.5	PAH Derivatives and Related Species	64
2.3.5.1	Nitrogen-Substituted PAHs	65
2.3.5.2	Protonated PAHs	65
2.3.5.3	Hydrogenated and Dehydrogenated PAHs	66
2.3.5.4	Metal-PAH Complexes	67
2.3.5.5	Other PAH Modifications	67
2.3.6	Conclusions	68
2.4	The Spectroscopy of Complex Molecules	68
	<i>Holger S. P. Müller</i>	
2.4.1	Introduction	68
2.4.2	General Spectroscopic Considerations	69
2.4.3	The Quest for Interstellar Glycine	72
2.4.4	General Astronomic Considerations	73
2.4.5	Alkyl Alcohols	77
2.4.5.1	Methanol, CH_3OH	77
2.4.5.2	Ethanol, $\text{C}_2\text{H}_5\text{OH}$	79
2.4.5.3	Larger alkanols	81
2.4.5.4	Alkanediols and -polyols	82
2.4.6	Alkyl Ethers	83
2.4.6.1	Dimethyl, Ether CH_3OCH_3	84
2.4.6.2	Larger Ethers	86
2.4.7	Esters	87
2.4.8	Alkyl Cyanides	89
2.4.9	Other Complex Molecules	91
	References	97

3	Gas Phase Chemistry 109
	<i>Stephan Schlemmer</i>
3.1	Introduction 109
3.1.1	Cross Sections and Rate Coefficients for Binary Collisions 117
3.1.2	Differential Scattering and Crossed Beam Experiments 123
3.1.3	Low-Energy Collisions in Merged Beams and Integral Cross Sections 128
3.1.4	Low-Temperature Collisions in Beams and Traps, Thermal Rate Coefficients 132
3.1.4.1	Selected Ion Flow Tubes 134
3.1.4.2	Laval Nozzle Expansions 136
3.1.4.3	Trap Experiments 139
	Acknowledgment 143
3.2	Dissociative Recombination 143
	<i>Wolf Geppert, Andreas Wolf, and Juraj Glosik</i>
3.2.1	Principle and Main Occurrence 143
3.2.1.1	Mechanisms of Dissociative Recombination 144
3.2.1.2	Dissociative Recombination in Astronomical Environments 146
3.2.2	Methods of Laboratory Study 151
3.2.2.1	Multicollisional Swarm Methods 151
3.2.2.2	Single-Collision Beam Methods 154
3.2.3	Recent Laboratory Results and their Impact on Molecular Astrophysics 157
3.2.3.1	DR of the Triatomic Hydrogen Ion H_3^+ 157
3.2.3.2	Branching Ratios and Internal Excitation for Molecular Fragments from DR 159
3.2.3.3	DR and Formation of Interstellar Methanol 160
3.2.3.4	DR of Protonated Nitriles in Titan's Ionosphere 162
3.3	Inelastic Processes 163
	<i>David Parker and Laurent Wiesenfeld</i>
3.3.1	Introduction 163
3.3.2	Molecular Beam Measurements of Inelastic Scattering in Water 164
3.3.3	Laser Ionization of Molecular Hydrogen and Nascent Water 168
3.3.4	Experimental Details 169
3.3.4.1	Density to Flux Correction and Relative Collision Cross Sections 169
3.3.4.2	Temperature Control 170
3.3.5	Calculating Differential and Total Cross Sections 171
3.3.6	Water-Hydrogen Molecule PES 172
3.3.7	Dynamical Calculations 174
3.3.7.1	Total Cross Sections and Rates 174
3.3.7.2	Differential Cross Sections 174
3.3.8	Theory and Experiments Comparisons 175
3.3.8.1	Differential Cross Sections 175

3.3.8.2	Total Cross Sections	177
3.3.8.3	Other Scattering Experiments	178
3.4	Low Temperature Trapping Experiments	179
	<i>Oskar Asvany and Stephan Schlemmer</i>	
3.4.1	$N^+ + H_2$	181
3.4.2	$H_3^+ + H_2$	184
3.4.3	Deuterium Fractionation	190
3.4.4	Trap Experiments on Deuterium Enrichment	195
3.4.5	Toward State-to-State Rate Coefficients	202
3.5	Negative Ion Chemistry in the Early Universe	205
	<i>Holger Kreckel and Daniel Wolf Savin</i>	
3.5.1	Introduction: Negative Ions in Space	205
3.5.2	The Chemistry of the Early Universe	206
3.5.3	H_2 Formation by Associative Detachment of H^- and H	208
3.5.4	H^- Photodetachment	215
3.5.5	Mutual Neutralization of H^- and H^+	216
3.5.6	Summary	218
	Acknowledgments	219
	References	219
4	Molecular Photodissociation	229
	<i>Ewine F. van Dishoeck and Ruud Visser</i>	
4.1	Introduction	229
4.2	Photodissociation Processes	230
4.2.1	Small Molecules	230
4.2.2	Large Molecules	233
4.3	Photodissociation Cross Sections	234
4.3.1	Theory	234
4.3.1.1	Born–Oppenheimer approximation	235
4.3.1.2	Electronic Energies: Method of Configuration Interaction	236
4.3.1.3	Nuclear Dynamics: Oscillator Strengths and Cross Sections	237
4.3.2	Experiments	238
4.3.3	Photodissociation Products	240
4.4	Astrophysical Radiation Fields	242
4.4.1	General Interstellar Radiation Field	242
4.4.2	Stellar Radiation Fields	243
4.4.3	Lyman α Radiation	244
4.4.4	Cosmic-Ray-Induced Photons	244
4.4.5	Dust Attenuation	245
4.4.6	Self-Shielding	246
4.5	Photodissociation Rates	246
4.6	Photodissociation of CO and its Isotopologs	247
4.7	Photostability of PAHs	249
4.8	Summary	251

Acknowledgments 251

References 252

5 Surface Science 255

Liv Hornekær

5.1 Introduction 255

5.1.1 Surface Reactions under Interstellar Conditions 257

5.1.2 Experimental Methods 259

5.1.3 Introducing the Hot Topic Sections 261

5.1.4 Outlook 262

5.2 Molecular Hydrogen Formation on Carbonaceous Surfaces 262

Liv Hornekær and Stephen D. Price

5.2.1 Interaction of Atomic Hydrogen with Carbonaceous Surfaces 263

5.2.2 Formation of Molecular Hydrogen on Carbonaceous Surfaces 264

5.2.3 Energy Partitioning in H_2 Formation 269

5.2.4 Summary and Outlook 271

5.3 The Influence of Ice Morphology on Interstellar Chemistry 273

Martin McCoustra, Mark Collings, Francois Dulieu, Jean-Hugues Fillion, and Maria Elisabetta Palumbo

5.3.1 The Structure of Amorphous Solid Water (ASW) 273

5.3.2 Desorption of Molecular Hydrogen 276

5.3.3 Influence of the Morphology of the Ice on the Sticking of Hydrogen 278

5.3.4 Recombination Process 279

5.3.5 Energetic Balance of the H_2 Reaction and its Consequences on the Morphology of Ice 281

5.3.6 The Impact of Ice Morphology on Thermal Desorption Processes for Other Small Molecules 282

5.3.7 ASW Morphology Changes due to Ion and UV Irradiation 287

5.4 Solid-State Pathways toward Molecular Complexity in Space 289

Sergio Ioppolo, Karin I. Öberg, and Harold Linnartz

5.4.1 General Information on Experimental Techniques 290

5.4.2 Atom Bombardment 292

5.4.2.1 Introduction 292

5.4.2.2 Experimental Setup 293

5.4.3 $O/O_2/O_3 + H$ 296

5.4.4 UV Photoprocessing 299

5.4.4.1 Introduction 299

5.4.4.2 Radiation-Induced Dynamics and Chemistry in Ices 299

5.4.4.3 Experiment 300

5.4.4.4 UV Photodesorption Experiments and Key Results 302

5.4.4.5 Photochemistry Experiments 307

5.4.4.6 Other Ice Photochemistry Studies 308

Acknowledgments 309

5.5	New Computational Strategies for Including Surface Reactions in Astrochemical Network Models	309
	<i>Eric Herbst</i>	
5.5.1	Rate Equations	310
5.5.2	Stochastic Methods	313
5.5.3	Modified Rate Equations	316
5.5.4	Microscopic Studies: A Kinetic Monte Carlo Approach	316
5.5.5	Summary	318

6	Dust and Nanoparticle Spectroscopy	327
	<i>Harald Mutschke</i>	
6.1	Introduction I: Spectroscopic Observations of Cosmic Dust	327
	<i>Thomas Henning</i>	
6.1.1	Dust in the Interstellar Medium	327
6.1.2	Stardust	332
6.1.3	Dust in Planetary and Protoplanetary Systems	334
6.2	Introduction II: Techniques in Laboratory Dust Spectroscopy	337
	<i>Harald Mutschke and Akemi Tamani</i>	
6.2.1	Calculated Versus Measured Comparison Spectra	337
6.2.2	Measuring Dust Absorption Spectra	341
6.2.3	Determination of Optical Constants of Solids	347
6.3	The Bulk of Interstellar Dust: Amorphous Silicates	350
	<i>Harald Mutschke and Simon Zeidler</i>	
6.3.1	Structure of Silicates	351
6.3.2	Production Techniques for Amorphous Silicates	354
6.3.3	The Infrared Spectra of Amorphous Silicates	356
6.3.4	Optical Constants at UV/Vis/NIR Wavelengths	358
6.3.5	The Far-Infrared Emissivity of Cold Amorphous Silicates	359
6.4	Crystalline Silicates	361
	<i>Chiyo Koike</i>	
6.4.1	The Effect of Silicate Composition on Infrared Spectra	362
6.4.2	Temperature Effects on Infrared Spectra of Olivine and Pyroxene Particles	365
6.4.3	Optical Constants of Olivine at Room Temperature and Low Temperature	366
6.4.4	Structural Defects of Silicates	368
6.4.5	Shape Effects and Medium Effects on Infrared Spectra of Forsterite	370
6.4.6	The missing Iron Content Problem	370
6.5	Oxides as High-Temperature Condensates	372
	<i>Thomas Posch and Simon Zeidler</i>	
6.5.1	The Role of Oxide Dust in the Cosmic Matter Circuit	372
6.5.2	A General Remark on the IR Bands of Refractory Oxides	373
6.5.3	Al Oxides, Ca–Al Oxides, and Mg–Al Oxides	375

6.5.4	Silicon Oxides (SiO_2 and SiO)	378
6.5.5	Iron Oxides and Mg–Fe Oxides	380
6.5.6	Titanium Oxides	381
6.5.7	Constraining the Optical Constants in the NIR Region	382
6.5.8	Temperature Dependence of the Optical Constants	383
6.6	Spectroscopic Properties of Carbon Compounds	385
	<i>Harald Mutschke and Cornelia Jäger</i>	
6.6.1	Graphite, Diamond, and Fullerite	386
6.6.2	Hydrogenated Amorphous Carbon	390
6.6.3	Silicon Carbide and Other Carbides	394
6.7	Photoluminescence Studies of Silicon-Based Nanoparticles	397
	<i>Friedrich Huysken, Olivier Guillois, Olivier Debieu, Karsten Potrick, and Torsten Schmidt</i>	
6.7.1	Effects of Nanoscale Particle Size	397
6.7.2	PL Spectra of Free Si NCs	398
6.7.3	PL Spectra of Matrix-Embedded Si NCs	402
6.7.4	PL Spectra of Silicon Dioxide NPs	404
6.7.5	Consequences for the Interpretation of PL Observations	406
	Acknowledgments	408
