Contents

1 Introduction 1
1.1 Background 1
1.2 Statement of the Problem 3
1.3 Objectives of the Study 4
1.4 Methodology 5
1.5 Definitions of Concepts 6
1.5.1 Biomass Resource 6
1.5.2 Stockbreeding Industry 8
1.5.3 Stockbreeding Wastes 8
1.5.4 Big City 8
1.5.5 Present Technology 8
1.5.6 Advanced Technologies 8
1.6 Theoretical Background 8
1.7 Literature Review 10
1.7.1 System Research on Biomass Resource 10
1.7.2 Policy Research on Biomass Resource 10
1.7.3 Empirical Qualitative Analysis on Biomass Resource 12
1.7.4 Empirical Synthetic Analysis on Biomass Resource 12
1.7.5 Utilization of Stockbreeding Wastes Treatment Technology 14
References 16

2 Characteristics of the Study Area 19
2.1 Development of Stockbreeding Industry and Its Pollution in Beijing 19
2.1.1 Natural Geographical Environment 19
2.1.2 Development of Stockbreeding Industry in Beijing 20
2.1.3 Environmental Pollution Caused by Stockbreeding Wastes 21
2.1.4 Potential Value of Biomass Resource of Stockbreeding Wastes 22

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.2 Miyun County and Miyun Reservoir 22
2.2.1 The Importance of Miyun County and Miyun Reservoir... 22
2.2.2 The State of Water Environment in the Catchment Area ... 23
2.2.3 The State of Water Environmental Management in the Catchment Area 25
2.3 Study Area: The Upstream Area of Miyun Reservoir in Miyun County 26
2.3.1 Classification of Sub-basins of the Main Rivers and Water Pollutant Sources 26
2.3.2 Regional Socio-economic Status of the Study Area..... 27
2.3.3 Total Pollution in the Study Area 29
2.4 Implications and Conclusions 31
References 32

3 Evaluation of Water Pollutant Minimization Policies with Adopting Present Technology 33
3.1 Model Characteristics and Structure 34
3.1.1 Framework of the Model 34
3.1.2 The Classification of Each Generation Source, Basic Data and Simulation Running Period..... 34
3.1.3 The Hypotheses of Simulation Model 35
3.1.4 Water Pollution-Minimization Policies 37
3.2 Principles of Modeling and Important Indicators..... 37
3.2.1 Principles of Modeling..... 37
3.2.2 Important Indicators..... 38
3.3 The Model Specification 39
3.3.1 Objective Function..... 39
3.3.2 The Material Flow Balance Model..... 39
3.3.3 Treatment Policies for Non-point Sources..... 43
3.3.4 Policies for Household Wastewater Generation..... 45
3.3.5 Treatment Measures for Production Generation Sources... 47
3.3.6 Total Budget of the Government for the Countermeasures .. 48
3.3.7 Flow Balance in the Commodity Market..... 48
3.3.8 Restriction of Net Export..... 49
3.3.9 Restriction of Consumption..... 49
3.3.10 Gross Regional Product..... 49
3.3.11 Constraints on the Regional Economy..... 50
3.4 Simulation Results..... 50
3.4.1 Objective Function..... 50
3.4.2 Changes in GRP..... 51
3.4.3 Variations in Production and Water Pollutants Flowing into Reservoir from Pig Farming..... 52
3.4.4 Production of Manufacturing Industry..... 54
3.5 Conclusions and Discussions..... 55
References..... 56

4 Analysis of Optimal Environmental Policies with Advanced Technologies for Effective Treatment of Stockbreeding Wastes 57
4.1 Concepts of Integrated Environmental Policies 57
4.1.1 Direct Regulation 57
4.1.2 Economic Instruments 58
4.1.3 Integrated Approach 59
4.2 Integrated Policy Framework 59
4.2.1 Classification of Pollutants and Sources 59
4.2.2 Integrated Policies 60
4.3 Advanced Technologies for Proper Treatment of Stockbreeding Wastes 62
4.3.1 Introduction of Technologies 62
4.3.2 Efficiency of the Advanced Technologies 62
References 63

5 Comprehensive Evaluation of Environmental Policies with Advanced Technologies for Effective Utilization of Biomass Resource 65
5.1 Model Structure and Characteristics 65
5.1.1 Objective Function 66
5.1.2 Water Pollutants Flow Balance Model 66
5.1.3 Air Pollutants Flow Balance Model 70
5.1.4 The Quantitative Change in Pig 71
5.1.5 Energy Balance Model 74
5.1.6 Treatment Policies for Non-point Sources 76
5.1.7 Policies for Household Wastewater Generation 78
5.1.8 Treatment Measures for Production Generation Sources 81
5.1.9 Total Budget of the Government for the Countermeasures 81
5.1.10 Flow Balance in the Commodity Market 82
5.1.11 Restriction of Net Export 82
5.1.12 Restriction of Consumption 83
5.1.13 Gross Regional Product 83
5.1.14 Constraints on the Regional Economy 83
5.1.15 Targeted Environmental Improvement 83
5.2 Simulation Results 84
5.2.1 Objective Function and Total GRP 84
5.2.2 Budget Expenditures for the Policy 85
5.2.3 Variations in Production of Pig Farming Industry 86
5.2.4 Pollutants Emitted from Pig Farming Industry 87
5.2.5 Amount of Electric Energy Produced by the Advanced Technologies 88
5.3 Conclusions and Discussions 89
References 90

6 Cost Benefit Analysis and Regional Analysis 91
6.1 Cost-Benefit Analysis 91
6.1.1 Socio Cost-Benefit Analysis 91
6.1.2 Private Cost-Benefit Analysis 93
6.2 Regional Analysis 95
6.3 Conclusions and Discussions 96
References 97

7 Conclusions 99
7.1 Summary of Findings 99
7.1.1 Current Situations 99
7.1.2 Evaluation of Water Pollutants-Minimization Policies with Present Technologies 100
7.1.3 Comprehensive Evaluation of Environmental Policies with Advanced Technologies for Effective Utilization of Biomass Resource 101
7.2 Conclusions 102
7.2.1 The Modeling Approach to Address the Problem 102
7.2.2 The Source of Pollution and Future Changes 102
7.2.3 Cost-Benefit Options for Reduction of Pollutants and Utilization of Biomass Resource 103
7.2.4 Policy Proposals for Comprehensive Management 103
References 105

Appendix: Meaning of Technical Words Used 107
