

1	General Introduction	1
1.1	Fundamentals of Organic Electroluminescence	2
1.2	A Scan of Organic Electroluminescent Materials	5
1.3	Triplet Energy Back Transfer: The Bottleneck in Design of Electrophosphorescent Polymers	7
1.4	Polymer Host Materials	10
1.5	Electrophosphorescent Polymers	12
1.6	Aims of This Thesis	18
	References	19
2	Polyarylether Hosts	23
2.1	Background	23
2.2	Molecular Designs	24
2.3	Results and Discussions	25
2.4	Experimental Section	36
	References	41
3	Blue/Yellow Electrophosphorescent Polymers Based on Polyarylether Hosts	43
3.1	Background	43
3.2	Molecular Designs	44
3.3	Results and Discussions	45
	3.3.1 Blue Electrophosphorescent Polyarylethers	45
	3.3.2 Yellow Electrophosphorescent Polyarylethers	52
3.4	Experimental Section	57
	References	63

4	All-Phosphorescent Single-Component White Polymers	65
4.1	Background	65
4.2	Molecular Designs	66
4.3	Results and Discussions	67
4.4	Experimental Section	75
	References	76
5	Spiro-Linked Hyperbranched Architecture for Electrophosphorescent Polymers	79
5.1	Background	79
5.2	Molecular Design	80
5.3	Results and Discussions	81
5.4	Experimental Section	88
	References	92
6	Conclusions and Outlook	95
