Preface — vii

Ning Dai

1	Optoelectronic properties of narrow band gap semiconductors — 1
1.1	Introduction — 1
1.2	Fundamental properties of NGSs — 3
1.2.1	Electronic states and band structures — 4
1.2.2	Structural characteristics — 8
1.2.3	Crystal growth — 9
1.2.4	Electronic properties — 12
1.2.5	Optical properties — 15
1.3	Narrow band gap semiconductors and their basic characteristics — 21
1.3.1	Mercury cadmium telluride ($\text{Hg}_{1-x}\text{Cd}_x\text{Te}$) — 21
1.3.2	Indium antimonide (InSb), Indium arsenide (InAs), Indium arsenide antimonide ($\text{InAs}_{1-x}\text{Sb}_x$) — 25
1.3.3	Lead telluride (PbTe), lead selenide (PbSe), lead sulfide (PbS) and tellurium tin-lead ($\text{Pb}_{1-x}\text{Sn}_x\text{Te}$) — 27
1.3.4	Heterojunctions, quantum wells, and superlattices — 30
1.4	Basic principles and applications of infrared optoelectronic devices — 31
1.4.1	Basic principles of infrared detectors — 31
1.4.2	Parameters for characterizing the performance of infrared detectors — 35
1.4.3	Photoconductive infrared detectors — 37
1.4.4	Photovoltaic infrared detectors — 39
1.4.5	Quantum well infrared photodetectors — 43
1.4.6	Infrared light sources: infrared light emitting devices and infrared lasers — 44

Xunya Jiang, Wei Li, Zheng Liu, Xulian Lin, Xianggao Zhang, Zixian Liang, Peijun Yao

2	The group velocity picture: the dynamic study of metamaterial systems — 51
2.1	Introduction — 51
2.2	Hyperinterface, the bridge between radiative and evanescent waves — 54
2.2.1	Introduction — 54
2.2.2	Model — 55
2.2.3	Hyperbola dispersion and compressing light pulses effect at HI — 56
2.2.4	Analysis of abnormal optical properties of HI with group velocity — 57

2.2.5	Numerical experiments and results — 59
2.2.6	Section summary — 60
2.3	Methods for detecting vacuum polarization by evanescent modes — 61
2.3.1	Study model — 62
2.3.2	The phase change and delay time of evanescent waves in a tiny dissipative medium — 64
2.3.3	Vacuum polarization and refraction index deviations of a vacuum — 65
2.3.4	Detecting vacuum polarization: phase change and delay time — 66
2.3.5	Section summary — 68
2.4	The temporal coherence gain of the negative-index superlens image — 68
2.4.1	Introduction — 68
2.4.2	Model — 69
2.4.3	Unusual phenomena — 70
2.4.4	Physical images — 71
2.4.5	Our theory — 72
2.4.6	Section summary — 74
2.5	Dynamical process for dispersive cloaking structures — 75
2.5.1	Introduction — 75
2.5.2	Study model — 76
2.5.3	The physical dynamical picture of invisible cloaking — 77
2.5.4	The key factor for the dynamics of invisible cloaking — 78
2.5.5	Section summary — 81
2.6	Limitation of the electromagnetic cloak with dispersive material — 82
2.6.1	Introduction — 82
2.6.2	The group velocity and physical limitation of invisible cloaking — 83
2.6.3	Numerical results and discussion — 85
2.6.4	Section summary — 87
2.7	Confining the one-way mode at a magnetic domain wall — 88
2.7.1	Introduction — 88
2.7.2	Model — 89
2.7.3	Confining the one-way mode — 90
2.7.4	Robustness against roughness — 92
2.7.5	Photonic splitters and benders — 92
2.7.6	Section summary — 94
2.8	Bullet-like light pulse in linear photonic crystals — 95
2.8.1	Introduction — 95
2.8.2	The condition for the existence of bullet-like light pulses — 95
2.8.3	The bullet-like light pulse in PCs — 96
2.8.4	Numerical validation — 96

2.8.5	The effect of high-order dispersion —	98
2.8.6	Section summary —	99
2.9	Summary —	100

Liangyao Chen, Yuxiang Zheng, Songyou Wang

3	Study of the characteristics of light propagating at the metal-based interface —	107
3.1	Introduction —	107
3.2	The free-electron gas model and optical constants of metal —	108
3.3	Light refraction properties of a metal-based interface —	112
3.3.1	Normal refraction —	112
3.3.2	Calculations of effective refractive index and refraction angle —	113
3.3.3	Negative refraction of metal-based artificial materials —	116
3.3.4	Measurement of the effective refractive index and refractive angle of light in metal —	120
3.3.5	Influence of variable refractive indices on light velocity —	127
3.4	Affect of surface plasma waves on light propagation in metals —	130
3.5	Conclusion —	134

Haibin Zhao

4	Photo-induced spin dynamics in spintronic materials —	139
4.1	Introduction —	139
4.2	Theory of magnetization dynamics —	140
4.2.1	The Landau–Lifshitz–Gilbert (LLG) equation —	140
4.2.2	The Landau–Lifshitz–Bloch (LLB) equation —	143
4.3	Optical techniques in studies of spin dynamics —	144
4.3.1	Time-resolved magneto-optical spectroscopy —	144
4.3.2	Time-resolved magnetic second-harmonic-generation (TR-MSHG) —	151
4.4	Photo-induced demagnetization and magnetic phase transition —	154
4.4.1	Demagnetization in transition ferromagnetic (FM) metals —	154
4.4.2	Demagnetization in other FM materials —	160
4.4.3	Ultrafast magnetization generation and FM phase transition —	161
4.5	Photo-induced spin precession —	162
4.5.1	Uniform spin precession and spin wave in FM materials —	162
4.5.2	Spin waves in ferromagnetic materials —	165
4.5.3	Mechanisms of spin precession excitation —	167
4.6	Photo-induced spin reversal —	174
4.6.1	Spin switching and reversal in FM materials —	174
4.6.2	Spin reversal in ferromagnetic materials —	176
4.7	Spin dynamics at interfaces and in antiferromagnets —	180
4.7.1	MSHG and magnetism at interfaces —	180

4.7.2	Spin dynamics in antiferromagnets — 182
4.8	Conclusions and outlook — 183

Kuijuan Jin, Chen Ge, Huibin Lu, Guozhen Yang

5	Research on the photoelectric effect in perovskite oxide heterostructures — 191
5.1	Introduction — 191
5.2	Perovskite oxide — 192
5.2.1	Crystal structure — 192
5.2.2	Electron structure — 193
5.2.3	Mechanism for photoelectric effects in bulk perovskite oxides — 195
5.3	Growth of perovskite oxide films — 200
5.3.1	A brief introduction to the film-growth techniques — 200
5.3.2	Laser molecular beam epitaxy — 201
5.4	Logitudinal photoelectric effects in perovskite oxide heterostructures — 203
5.4.1	Light-generated carrier injection effects — 203
5.4.2	Photovoltaic effect — 205
5.4.3	Theoretical study on longitudinal photoelectric effects — 210
5.5	Lateral photoelectric effect in perovskite oxide heterostructures — 216
5.5.1	Background — 216
5.5.2	Unusual lateral photoelectric effect in perovskite oxide heterostructures — 217
5.5.3	Theoretical study — 219
5.6	Summary — 222

Hui Liu, Shining Zhu

6	Magnetic resonance and coupling effects in metallic metamaterials — 231
6.1	Background — 231
6.2	Magnetic metamolecules — 234
6.2.1	Plasmon hybridization effect — 234
6.2.2	Hybridization effect in magnetic metamolecules — 235
6.2.3	Stereometamaterial — 237
6.2.4	Optical activity in magnetic metamolecules — 237
6.2.5	Radiation of magnetic metamolecules — 239
6.2.6	Other designs of magnetic metamolecules — 239
6.3	One-dimensional magnetic resonator chains — 240
6.3.1	Periodic magnetic resonator chain — 240
6.3.2	Nonperiodic chain of magnetic resonators — 245
6.3.3	Nonlinear and quantum optics of magnetic resonators — 247
6.4	Magnetic plasmon crystal — 248

6.4.1	Two-dimensional fishnet structure —	249
6.4.2	Two-dimensional nanosandwich structures —	253
6.4.3	Quantum interference in a three-dimensional magnetic plasmon crystal —	261
6.5	Summary and outlook —	265

Index —	271
