Contents

1 Construction of Liouvillian Classes of Functions and Liouville's Theory 1

1.1 Defining Classes of Functions by Lists of Basic Functions and Admissible Operations 2

1.2 Liouvillian Classes of Functions of a Single Variable 3

1.2.1 Functions of One Variable Representable by Radicals 3

1.2.2 Elementary Functions of One Variable 5

1.2.3 Functions of One Variable Representable by Quadrature 5

1.3 A Bit of History 6

1.4 New Definitions of Liouvillian Classes of Functions 7

1.4.1 Elementary Functions of One Variable 7

1.4.2 Functions of One Variable Representable by Quadratures 8

1.4.3 Generalized Elementary Functions of One Variable and Functions of One Variable Representable by Generalized Quadratures and k-Quadratures 8

1.5 Liouville Extensions of Abstract and Functional Differential Fields 10

1.6 Integration of Elementary Functions 13

1.6.1 Liouville's Theorem: Outline of a Proof 15

1.6.2 Refinement of Liouville's Theorem 16

1.6.3 Algebraic Extensions of Differential Fields 17

1.6.4 Extensions of Transcendence Degree One 18

1.6.5 Adjunction of an Integral and an Exponential of Integral 21

1.6.6 Proof of Liouville's Theorem 22

1.7 Integration of Functions Containing the Logarithm 25
1.7.1 The Polar Part of an Integral 25
1.7.2 The Logarithmic Derivative Part 26
1.7.3 Integration of a Polynomial of a Logarithm 27
1.7.4 Integration of Functions Lying in a Logarithmic Extension of the Field $\mathbb{C}(z)$ 28
1.8 Integration of Functions Containing an Exponential 29
1.8.1 Principal Polar Part of the Integral 29
1.8.2 Principal Logarithmic Derivative Part 30
1.8.3 Integration of Laurent Polynomials of the Exponential 32
1.8.4 Solvability of First-Order Linear Differential Equations 32
1.8.5 Integration of Functions Lying in an Exponential Extension of the Field $\mathbb{C}(z)$ 35
1.9 Integration of Algebraic Functions 35
1.9.1 The Rational Part of an Abelian Integral 36
1.9.2 Logarithmic Part of an Abelian Integral 38
1.9.3 Elementarity and Nonelementarity of Abelian Integrals 41
1.10 The Liouville–Mordukhai-Boltovski Criterion 44

2 Solvability of Algebraic Equations by Radicals and Galois Theory 47
2.1 Action of a Solvable Group and Representability by Radicals 49
2.1.1 A Sufficient Condition for Solvability by Radicals 49
2.1.2 The Permutation Group of the Variables and Equations of Degree 2, 3, and 4 51
2.1.3 Lagrange Polynomials and Abelian Linear-Algebraic Groups 52
2.1.4 Solving Equations of Degrees 2, 3, and 4 by Radicals 55
2.2 Fixed Points of Finite Group Actions 58
2.3 Field Automorphisms and Relations Between Elements in a Field 61
2.3.1 Equations Without Multiple Roots 61
2.3.2 Algebraicity over an Invariant Subfield 61
2.3.3 Subalgebras Containing the Coefficients of a Lagrange Polynomial 62
2.3.4 Representability of One Element Through Another Element over an Invariant Subfield 63
2.4 Action of a k-Solvable Group and Representability by k-Radicals 64
2.5 Galois Equations 65
2.6 Automorphisms Related to a Galois Equation 67
2.7 The Fundamental Theorem of Galois Theory 68
2.7.1 Galois Extensions 68
2.7.2 Galois Groups 69
2.7.3 The Fundamental Theorem 70
2.7.4 Properties of the Galois Correspondence 70
2.7.5 Changing the Field of Coefficients 72

2.8 A Criterion for Solvability of Equations by Radicals 73
2.8.1 Roots of Unity 73
2.8.2 The Equation $x^n = a$ 74
2.8.3 Solvability by Radicals 75
2.9 A Criterion for Solvability by k-Radicals 76
2.9.1 Properties of k-Solvable Groups 76
2.9.2 Solvability by k-Radicals 78
2.9.3 Unsolvability of the General Equation of Degree $k + 1 > 4$ by k-Radicals 79
2.10 Unsolvability of Complicated Equations by Solving Simpler Equations 81
2.10.1 A Necessary Condition for Solvability 81
2.10.2 Classes of Finite Groups 82

3 Solvability and Picard–Vessiot Theory 85
3.1 Similarity Between Linear Differential Equations and Algebraic Equations 85
3.1.1 Division with Remainder and the Greatest Common Divisor of Differential Operators 85
3.1.2 Reduction of Order for a Linear Differential Equation as an Analogue of Bézout's Theorem 86
3.1.3 A Generic Linear Differential Equation with Constant Coefficients and Lagrange Resolvents 87
3.1.4 Analogue of Viete's Formulas for Differential Operators 88
3.1.5 An Analogue of the Theorem on Symmetric Functions for Differential Operators 90
3.2 A Picard–Vessiot Extension and Its Galois Group 91
3.3 The Fundamental Theorem of Picard–Vessiot Theory 93
3.4 The Simplest Picard–Vessiot Extensions 94
3.4.1 Algebraic Extensions 94
3.4.2 Adjoining an Integral 95
3.4.3 Adjoining an Exponential of Integral 96
3.5 Solvability of Differential Equations 98
3.6 Linear Algebraic Groups and Necessary Conditions of Solvability 99
3.7 A Sufficient Condition for the Solvability of Differential Equations 101
3.8 Other Kinds of Solvability 104

4 Coverings and Galois Theory 107
4.1 Coverings over Topological Spaces 109
4.1.1 Classification of Coverings with Marked Points 109
4.1.2 Coverings with Marked Points and Subgroups of the Fundamental Group 111
4.1.3 Other Classifications of Coverings 114

4.1.4 A Similarity Between Galois Theory and the Classification of Coverings 117
4.2 Completion of Ramified Coverings and Riemann Surfaces of Algebraic Functions 118
4.2.1 Filling Holes and Puiseux Expansions 119
4.2.2 Analytic-Type Maps and the Real Operation of Filling Holes 121
4.2.3 Finite Ramified Coverings with a Fixed Ramification Set 123
4.2.4 The Riemann Surface of an Algebraic Equation over the Field of Meromorphic Functions 128
4.3 Finite Ramified Coverings and Algebraic Extensions of Fields of Meromorphic Functions 130
4.3.1 The Field $P_a(O)$ of Germs at the Point $a \in X$ of Algebraic Functions with Ramification over O 130
4.3.2 Galois Theory for the Action of the Fundamental Group on the Field $P_a(O)$ 132
4.3.3 Field of Functions on a Ramified Covering 134
4.4 Geometry of Galois Theory for Extensions of the Field of Meromorphic Functions 136
4.4.1 Galois Extensions of the Field $K(X)$ 136
4.4.2 Algebraic Extensions of the Field of Germs of Meromorphic Functions 137
4.4.3 Algebraic Extensions of the Field of Rational Functions 138

5 One-Dimensional Topological Galois Theory 143
5.1 On Topological Unsolvability 144
5.2 Topological Nonrepresentability of Functions by Radicals 147
5.2.1 Monodromy Groups of Basic Functions 148
5.2.2 Solvable Groups 149
5.2.3 The Class of Algebraic Functions with Solvable Monodromy Groups Is Stable 149
5.2.4 An Algebraic Function with a Solvable Monodromy Group Is Representable by Radicals 151
5.3 On the One-Dimensional Version of Topological Galois Theory ... 152
5.4 Functions with at Most Countable Singular Sets 153
5.4.1 Forbidden Sets 154
5.4.2 The Class of $\mathscr{S}$-Functions Is Stable 155
5.5 Monodromy Groups 157
5.5.1 Monodromy Group with a Forbidden Set 157
5.5.2 Closed Monodromy Groups 158
5.5.3 Transitive Action of a Group on a Set and the Monodromy Pair of an $\mathscr{S}$-Function 158

5.5.4 Almost Normal Functions 159
5.5.5 Classes of Group Pairs 160
5.6 The Main Theorem 161
5.7 Group-Theoretic Obstructions to Representability by Quadratures 164
5.7.1 Computation of Some Classes of Group Pairs 164
5.7.2 Necessary Conditions for Representability by Quadratures, k-Quadratures, and Generalized Quadratures 167
5.8 Classes of Singular Sets and a Generalization of the Main Theorem 170
5.8.1 Functions Representable by Single-Valued X_1-Functions and Quadratures 171

6 Solvability of Fuchsian Equations 173
6.1 Picard–Vessiot Theory for Fuchsian Equations 173
6.1.1 The Monodromy Group of a Linear Differential Equation and Its Connection with the Galois Group 173
6.1.2 Proof of Frobenius's Theorem 176
6.1.3 The Monodromy Group of Systems of Linear Differential Equations and Its Connection with the Galois Group 178
6.2 Galois Theory for Fuchsian Systems of Linear Differential Equations with Small Coefficients 180
6.2.1 Fuchsian Systems of Equations 180
6.2.2 Groups Generated by Matrices Close to the Identity 182
6.2.3 Explicit Criteria for Solvability 185
6.2.4 Strong Unsolvability of Equations 187
6.3 Maps of the Half-Plane onto Polygons Bounded by Circular Arcs 188
6.3.1 Using the Reflection Principle 188
6.3.2 Groups of Fractional Linear and Conformal Transformations of the Class $\mathscr{M}(\mathbb{C}, \mathscr{K})$ 189
6.3.3 Integrable Cases 191

7 Multidimensional Topological Galois Theory 195
7.1 Introduction 195
7.1.1 Operations on Multivariate Functions 196
7.1.2 Liouvillian Classes of Multivariate Functions 197
7.1.3 New Definitions of Liouvillian Classes of Multivariate Functions 200
7.1.4 Liouville Extensions of Differential Fields Consisting of Multivariate Functions 202

7.2 Continuation of Multivalued Analytic Functions to an Analytic Subset 204
7.2.1 Continuation of a Single-Valued Analytic Function to an Analytic Subset 206
7.2.2 Admissible Stratifications 207
7.2.3 How the Topology of an Analytic Subset Changes at an Irreducible Component 208
7.2.4 Covers Over the Complement of a Subset of Hausdorff Codimension Greater Than 1 in a Manifold 210
7.2.5 Covers Over the Complement of an Analytic Set 213
7.2.6 The Main Theorem 215
7.3 On the Monodromy of a Multivalued Function on Its Ramification Set 216
7.3.1 $\mathscr{S}$-Functions 217
7.3.2 Almost Homomorphisms and Induced Closures 219
7.3.3 Induced Closure of a Group Acting on a Set in the Transformation Group of a Subset 221
7.3.4 The Monodromy Groups of Induced Functions 222
7.3.5 Classes of Group Pairs 224
7.4 Multidimensional Results on Nonrepresentability of Functions by Quadratures 226
7.4.1 Formulas, Their Multigerms, Analytic Continuations, and Riemann Surfaces 227
7.4.2 The Class of $\mathscr{SC}$-Germs, Its Stability Under the Natural Operations 229
7.4.3 The Class of Formula Multigerms with the $\mathscr{SC}$-Property 233
7.4.4 Topological Obstructions to Representability of Functions by Quadratures 234
7.4.5 Monodromy Groups of Holonomic Systems of Linear Differential Equations 236
7.4.6 Holonomic Systems of Linear Differential Equations with Small Coefficients 237

A Straightedge and Compass Constructions 239
A.1 Solvability of Equations by Square Roots 240
A.1.1 Background Material 241
A.1.2 Extensions by 2-Radicals 241
A.1.3 2-Radical Extensions of a Field of Characteristic 2 243
A.1.4 Roots of Unity 243
A.1.5 Solvability of the Equation $x^n - 1 = 0$ by 2-Radicals 245
A.2 What Can Be Constructed Using Straightedge and Compass? 246
A.2.1 The Unsolvability of Some Straightedge and Compass Construction Problems 247

A.2.2 Some Explicit Constructions 248
A.2.3 Classical Straightedge and Compass Constructibility Problems 250
A.2.4 Two Specific Constructions 251
A.2.5 Stratification of the Plane 252
A.2.6 Classes of Constructions That Allow Arbitrary Choice 253
A.2.7 Trisection of an Angle 254
A.2.8 A Theorem from Affine Geometry 256

B Chebyshev Polynomials and Their Inverses 257
B.1 Chebyshev Functions over the Complex Numbers 258
B.1.1 Multivalued Chebyshev Functions 258
B.1.2 Germs of a Chebyshev Function at the Point $x = 1$ 260
B.1.3 Analytic Continuation of Germs 261
B.2 Chebyshev Functions over Fields 262
B.2.1 Algebraic Definition 262
B.2.2 Equations of Degree Three 263
B.2.3 Equations of Degree Four 264
B.3 Three Classical Problems 265
B.3.1 Inversion of Mappings in Radicals 265
B.3.2 Inversion of Mappings of Finite Fields 267
B.3.3 Integrable Mappings 268

C Signatures of Branched Coverings and Solvability in Quadratures 271
C.1 Coverings with a Given Signature 272
C.1.1 Definitions and Examples 272
C.1.2 Classification 273
C.1.3 Coverings and Classical Geometries 274
C.2 The Spherical Case 276
C.2.1 Application of the Riemann–Hurwitz Formula 276
C.2.2 Finite Groups of Rotations of the Sphere 277
C.2.3 Coverings with Elliptic Signatures 278
C.2.4 Equations with an Elliptic Signature 278
C.3 The Case of the Plane 278
C.3.1 Discrete Groups of Affine Transformations 278
C.3.2 Affine Groups Generated by Reflections 280
C.3.3 Coverings with Parabolic Signatures 280
C.3.4 Equations with Parabolic Signatures 281
C.4 Functions with Nonhyperbolic Signatures in Other Contexts 283
C.5 The Hyperbolic Case 284

D On an Algebraic Version of Hilbert's 13th Problem 287
D.1 Versions of Hilbert's 13th Problem 287
D.1.1 Simplification of Equations of High Degree 287
D.1.2 Versions of the Problem for Different Classes of Functions 288
D.2 Arnold's Theorem 289
D.2.1 Formulation of the Theorem 289
D.2.2 Results Related to Arnold's Theorem 290
D.2.3 The Proof of the Theorem 291
D.2.4 Polynomial Versions of Klein's and Hilbert's Problems ... 293
D.3 Klein's Problem 293
D.3.1 Birational Automorphisms and Klein's Problem 293
D.3.2 Essential Dimension of Groups 295
D.3.3 A Topological Approach to Klein's Problem 296
D.4 Arnold's Proof and Further Developments in Klein's Problem 297
