

Contents

Preface — vii

Introduction — 1

Part I Flutter of plates

1 Statement of the problem — 5

2 Determination of aerodynamic pressure — 6

3 Mathematical statement of problems — 11

4 Reduction to a problem on a disk — 14

5 Test problems — 20

6 Rectangular plate — 36

6.1 Problem statement and analytical solution — 36

6.2 Numerical-analytical solution — 38

6.3 Results — 41

6.4 Bubnov-Galerkin (B-G) method — 42

6.5 Dependence of critical flutter velocity on plate thickness — 46

6.6 Dependence of critical flutter velocity on altitude — 46

7 Flutter of a rectangular plate of variable stiffness or thickness — 48

7.1 Strip with variable cross section — 48

7.2 Rectangular plates — 52

8 Viscoelastic plates — 57

Part II Flutter of shallow shells

9 General formulation — 63

10 Determination of aerodynamic pressure — 66

11 The shallow shell as part of an airfoil — 71

12 The shallow shell of revolution — 74

13 The conical shell: external flow — 78

14 The conical shell: internal flow — 82

14.1 Statement of the problem — 82

14.2 Determination of dynamic pressure — 87

15 Example calculations — 91

Part III Numerical methods for non-self-adjoint eigenvalue problems

16 Discretization of the Laplace operator — 99

16.1 The Sturm–Liouville problem — 99

16.2 Interpolation formula for a function of two variables on a disk, and its properties — 104

16.3 Discretization of the Laplace operator — 108

16.4 Theorem of h -matrices — 109

16.5 Construction of h -matrix cells by discretization of Bessel equations — 112

16.6 Fast multiplication of h -matrices by vectors using the fast Fourier transform — 114

16.7 Symmetrization of the h -matrix — 116

17 Discretization of linear equations in mathematical physics with separable variables — 118

17.1 General form of equations with separable variables — 118

17.2 Further generalization — 119

18 Eigenvalues and eigenfunctions of the Laplace operator — 122

18.1 The Dirichlet problem — 123

18.2 Mixed problem — 135

18.3 The Neumann problem — 136

18.4 Numerical experiments — 140

19 Eigenvalues and eigenfunctions of a biharmonic operator — 142

19.1 Boundary-value problem of the first kind — 145

19.2 Boundary-value problem of the second kind — 145

19.3 Numerical experiments — 148

20 Eigenvalues and eigenfunctions of the Laplace operator on an arbitrary domain — 151

20.1 Eigenvalues and eigenvectors of the Laplace operator — 151

20.1.1 The Dirichlet problem — 158

20.1.2	Mixed problem —	158
20.1.3	The Neumann problem —	159
20.1.4	Description of the program LAP123C —	159
20.2	Program for conformal mapping —	164
20.3	Numerical Experiments —	166
21	Eigenvalues and eigenfunctions of a biharmonic operator on an arbitrary domain —	168
21.1	Eigenvalues and eigenfunctions of a biharmonic operator —	168
21.1.1	Boundary-value problem of the first kind —	173
21.1.2	Boundary-value problem of the second kind —	173
21.1.3	Description of the program BIG12AG —	173
21.2	Program for conformal mapping —	177
21.3	Numerical experiments —	179
22	Error estimates for eigenvalue problems —	180
22.1	Localization theorems —	180
22.2	A priori error estimate in eigenvalue problems —	183
22.3	A posteriori error estimate for eigenvalue problems —	185
22.4	Generalization for operator pencil —	185
Conclusion —		187
 Bibliography —		189
