1	Multi-modal Manhattan World Structure Estimation for Domestic Robots	1
	<i>Kai Zhou, Karthik Mahesh Varadarajan, Michael Zillich, Markus Vincze</i>	
1.1	Introduction	2
1.2	Related Work	5
1.2.1	Multi-modal Plane Estimation	5
1.2.2	Multi-modal Planar Modeling for Robotics	7
1.3	Relationship between Pairwise Data	7
1.3.1	Generalized Distance Matrix	8
1.3.2	Jensen-Shannon Divergence (JSD)	9
1.4	Modeling and Selection of Inliers	10
1.5	Experiments	11
1.6	Conclusion	15
	References	16
2	RMSD: A 3D Real-Time Mid-level Scene Description System	19
	<i>Kristiyan Georgiev, Rolf Lakaemper</i>	
2.1	Introduction	19
2.2	Related Work	23
2.3	Method Overview	24
2.3.1	Line Segment Extraction	25
2.3.2	Ellipse Extraction	26
2.3.3	System Limitations	26
2.4	3D Object Extraction	26
2.5	Experiments	28
2.5.1	3D Kinect Experiments	28
2.5.2	Object Tracking	29
2.5.3	Mobile Robot Experiment	29
2.6	Conclusion and Future Work	30
	References	30

3	Semantic and Spatial Content Fusion for Scene Recognition	33
	<i>Elahe Farahzadeh, Tat-Jen Cham, Wanqing Li</i>	
3.1	Introduction	33
3.2	Related Work	35
3.3	Overview of the Proposed Framework	36
3.4	Feature Extraction and Representation	37
3.4.1	Capturing Semantic Information	37
3.4.2	Capturing Contextual Information	38
3.4.3	Capturing Spatial Location Information	38
3.5	Spatial Semantic Feature Fusion (SSFF)	39
3.5.1	Exemplar-Set Selection	39
3.5.2	Learning Phase for SSFF Method	40
3.5.3	Scene Type Recognition for SSFF Method	45
3.6	Experimental Results	45
3.6.1	Results on 15-Scene Dataset	47
3.6.2	Results on MIT 67-Indoor Scenes Dataset	49
3.7	Conclusion	52
	References	52
4	Improving RGB-D Scene Reconstruction Using Rolling Shutter Rectification	55
	<i>Hannes Ovrén, Per-Erik Forssén, David Törnqvist</i>	
4.1	Introduction	55
4.1.1	Related Work	57
4.1.2	Structure	57
4.1.3	Notation	58
4.2	Sensor Calibration	58
4.2.1	Synchronizing the Timestamps	58
4.2.2	Relation of Coordinate Frames	61
4.3	Depth Map Rectification	63
4.3.1	Gyro Integration	63
4.3.2	Rectification	64
4.4	Experiments	65
4.4.1	Experiment Setup	65
4.4.2	Pan and Tilt Distortions	66
4.4.3	Wobble Distortions	69
4.5	Concluding Remarks	70
	References	70
5	Modeling Paired Objects and Their Interaction	73
	<i>Yu Sun, Yun Lin</i>	
5.1	Introduction	73
5.2	Human-Object-Object-Interaction Modeling	76
5.2.1	Bayesian Network Model for HOO Interaction	77
5.2.2	Object Detection	78
5.2.3	Motion Analysis	79

5.2.4	Object Reaction	82
5.2.5	Bayesian Network Inference	82
5.3	Experiments and Results	83
5.4	Conclusions	85
	References	85
6	Probabilistic Active Recognition of Multiple Objects Using Hough-Based Geometric Matching Features	89
	<i>Natasha Govender, Philip Torr, Mogomotsi Keaikitse, Fred Nicolls, Jonathan Warrell</i>	
6.1	Introduction	89
6.2	Related Work	91
6.3	Active Recognition of a Single Object	93
6.4	Active Recognition of Multiple Objects	97
6.5	Relationship to Mutual Information	101
6.6	Experimentation	102
6.7	Discussion	108
	References	108
7	Incremental Light Bundle Adjustment: Probabilistic Analysis and Application to Robotic Navigation	111
	<i>Vadim Indelman, Frank Dellaert</i>	
7.1	Introduction	111
7.2	Related Work	114
7.2.1	Computationally Efficient Bundle Adjustment	114
7.2.2	SLAM and Vision-Aided Navigation	115
7.3	Incremental Light Bundle Adjustment	116
7.3.1	Bundle Adjustment	116
7.3.2	Algebraic Elimination of 3D Points Using Three-View Constraints	117
7.3.3	Incremental Smoothing	118
7.4	Probabilistic Analysis of Light Bundle Adjustment	120
7.4.1	Datasets for Evaluation and Implementation	122
7.4.2	Evaluation	123
7.5	Application iLBA to Robotic Navigation	127
7.5.1	Formulation	128
7.5.2	Equivalent IMU Factor	129
7.5.3	Evaluation in a Simulated Aerial Scenario	131
7.6	Conclusions and Future Work	134
	References	135
8	Online Learning of Vision-Based Robot Control during Autonomous Operation	137
	<i>Kristoffer Öffjäll, Michael Felsberg</i>	
8.1	Introduction	137
8.2	Previous Work	139

8.2.1	Inverse Kinematics	139
8.2.2	Active Learning and Exploration	140
8.2.3	Visual Autonomous Navigation	140
8.2.4	Locally Weighted Projection Regression	141
8.2.5	Numerical Optimization	142
8.3	Proposed Method	142
8.3.1	Learning Inverse Kinematics by Exploration	143
8.3.2	Learning Autonomous Driving from Demonstration ...	144
8.4	Evaluation	145
8.4.1	Learning from Exploration	145
8.4.2	Learning from Demonstration	149
8.5	Conclusions	153
	References	154
9	3D Space Automated Aligning Task Performed by a Microassembly System Based on Multi-channel Microscope Vision Systems	157
	<i>Zhengtao Zhang, De Xu, Juan Zhang</i>	
9.1	Introduction	157
9.2	System Structure	158
9.3	Features Selection and Relative Pose Calculation	160
9.4	Coarse-to-Fine Alignment Strategy with Active Zooming Algorithm	161
9.4.1	Coarse Alignment	161
9.4.2	Active Zooming	162
9.4.3	Fine Alignment	165
9.5	Vision Servo Control Based on Jacobian	166
9.5.1	Image Jacobin Matrix Derivation	167
9.5.2	Feature Select for the Image Jacobian Control	168
9.5.3	Online Self-calibration for Jacobian	169
9.5.4	Controller Design for Image Servo Based on Jacobian	170
9.6	Experiments and Results	171
9.6.1	Hardware Setup	171
9.6.2	Error Analysis for the Position-Based Method	171
9.6.3	Image Servo Control Based on Jacobian Matrix	177
9.7	Conclusion	179
	References	179
10	Intensity-Difference Based Monocular Visual Odometry for Planetary Rovers	181
	<i>Geovanni Martinez</i>	
10.1	Introduction	181
10.2	Monocular Visual Odometry Algorithm	184
10.2.1	Planet's Ground Surface Model	185
10.2.2	Observation Points	185

10.2.3	Conditional Probability of the Intensity Differences	186
10.2.4	Maximizing the Conditional Probability	190
10.2.5	Planet’s Ground Surface Model Initialization	190
10.3	Experimental Results	191
10.4	Summary and Conclusions	195
10.5	Future Work	195
	References	197
