## Part I Background of the Energetics of Stochastic Processes

<b>1</b>	<b>Physics of Langevin Equation</b>	<b>3</b>
1.1	Random Events or Fluctuations	5
1.1.1	* Introduction: What Is Fluctuation?	5
1.1.2	Random Events Are Represented Through Random Variables	6
1.1.3	Free Brownian Motion Is the Force-Free Motion of Mesoscopic Objects in a Thermal Environment	17
1.2	Construction of Langevin Equations	26
1.2.1	Langevin Equation Can Be Intuitively Constructed, But Is Derivable from Micro-Mechanics Through the Markov Approximation	26
1.2.2	Stochastic Calculus is the Mathematical Framework that Removes Ambiguities in the Langevin Equation	34
1.2.3	Fokker–Planck Equation is the Mathematical Equivalent of the Langevin Equation when We Discuss the Ensemble Behavior	43
1.3	Physical Implications of Langevin Equations	47
1.3.1	Langevin Equation Transforms the Memory-Free Gaussian Noise into Variety of Fluctuations	47
1.3.2	Each Langevin Equation Has Its Own Smallest Space-Timescale of Applicability	50
1.3.3	A Trajectory of Langevin Equation Over a Long Time Allows Us to Draw Some Information About the Space and the Potential	54
1.3.4	Thermal Ratchet Models are the Examples of Nontrivial Fluctuations	58
1.4	Discussion	64
	References	64
<b>2</b>	<b>Structure of Macroscopic Thermodynamics</b>	<b>67</b>
2.1	Basic Concepts of Thermodynamics	67

2.1.1	*Terminology of Thermodynamics Includes System, Environments, and External System .....	67
2.1.2	*Some Laws of Macroscopic Thermodynamics Distinguish Thermodynamics from Mechanics .....	70
2.1.3	Thermodynamic Relations Come from Several Different Aspects of Thermodynamic Systems .....	71
2.1.4	*Heat of Macroscopic Open System Consists of Two Terms Both Including Entropic Parts .....	76
2.2	Free Energy as an Effective Potential Energy for the External System	78
2.3	*Free-Energy Conversion .....	81
2.3.1	Unused Work Is Not Released Heat .....	81
2.3.2	Chemical Coupling Is a Transversal Downhill of a Gibbs Free-Energy Surface .....	84
2.3.3	The Efficiencies of Heat Engine and Chemical Engine are Limited by the Second Law of Thermodynamics .....	86
2.3.4	Discontinuous Phase Transition Accompanies the Compensation Between Enthalpy and Entropy .....	89
2.4	Notes on the Extension of the Thermodynamics .....	91
	References .....	92
<b>3</b>	<b>Fluctuations in Chemical Reactions .....</b>	<b>93</b>
3.1	*Background of Chemical Reactions .....	93
3.1.1	“Molecule” in Chemical Reaction Is a Nonequilibrium State with Internal Degrees of Freedom .....	94
3.2	Macroscopic Description .....	96
3.2.1	*Law of Mass Action Relates the Rate Constants of Reaction to the Canonical Equilibrium Parameters .....	96
3.2.2	*Large Separation of the Rate Constants Causes Different Regimes of Reaction and Rate-Limiting Processes .....	99
3.3	Stochastic Description .....	105
3.3.1	Stochastic Transitions Among Discrete States Are Described by Master Equation or Discrete Langevin Equation .....	105
3.3.2	Stochasticity of Molecule Numbers in the Chemical Reaction Can Be Described by Discrete Master Equation ..	118
3.3.3	Stochastic Open System Is a Class of Stochastic Chemical Reaction System .....	124
3.4	Discussion .....	130
	References .....	130
 <b>Part II Basics of Stochastic Energetics</b>		
<b>4</b>	<b>Concept of Heat on Mesoscopic Scales .....</b>	<b>135</b>
4.1	Framework .....	136

4.1.1	* The Similarity of Setup Between the Fluctuating World and the Thermodynamics Leads to a Natural Definition of Mesoscopic Heat .....	136
4.1.2	* Energy Balance Along a Single Realization Follows from the Definition of Heat .....	139
4.1.3	The Ensemble Average Heat Flux has Several Different Expressions .....	149
4.2	Generalization .....	151
4.2.1	Heat on the Mesoscopic Scale Can Be Generalized to the System in Contact with More Than One Thermal Environments .....	151
4.2.2	Energetics of Thermal Ratchet Motors .....	159
4.2.3	Fluctuating Open System Does Not Exchange Chemical Potential as Energy of Particle .....	165
4.3	Discussion .....	170
4.3.1	Applicability of Stochastic Energetics to Different Forms of Langevin Equations .....	170
4.3.2	Applicability to Nonequilibrium Processes and Limitations of the Langevin Description .....	171
4.3.3	Comments .....	173
	References .....	173
<b>5</b>	<b>Work on the Mesoscopic Systems .....</b>	<b>175</b>
5.1	* Work Done by External System .....	176
5.2	Work Under Infinitely Slow Variation of Parameters .....	177
5.2.1	The Quasistatic Work of a Single Trajectory Leads to a Pertinent Free Energy and Is, Therefore, Reversible ...	177
5.2.2	The Criterion of the Quasistatic Process Refers to the Force on the External System .....	184
5.2.3	Quasistatic Work Reflects Some Aspects of the System's State, but Not All .....	185
5.3	Work Under Very Slow Variation of Parameters .....	190
5.3.1	The Average Irreversible Work and the Time Spent for the Work are Complementary .....	190
5.3.2	* For the External System the Weak Irreversible Work is Ascribed to a (Macro) Frictional Force .....	192
5.4	Work Under the Change of Parameter at Arbitrary Rates .....	194
5.4.1	Jarzynski's Nonequilibrium Work Relation Leads to the Nonnegativity of the Average Irreversible Work .....	194
5.4.2	The Fluctuation Theorem Leads to Jarzynski's Nonequilibrium Work Relation for Discrete Process .....	198
5.5	Discussion .....	199
5.5.1	How Fast Can the External Parameter Be Changed? .....	199
5.5.2	Can We Change a Parameter Slowly Enough for the Quasistatic Process? .....	200
	References .....	200

<b>6</b>	<b>Heat Viewed at Different Scales</b>	203
6.1	* Introduction – What Is Heat?	203
6.1.1	Each Description Scale Has its Own Definition of Heat	203
6.1.2	Examples of Nonuniqueness of Heat	204
6.2	* Calorimetric Heat vs. the Heat of Stochastic Energetics	208
6.2.1	System Can Have Different Levels of Random Variables	208
6.2.2	Equilibrium Statistical Mechanics of Mesoscopic Variables Can Have Different Level of Free-Energy Functions	209
6.2.3	Calorimetric Heat Can Be Deduced from Stochastic Energetics	211
6.3	Change in the Scale of Heat	215
6.3.1	Fluid Fluctuations Causing Brownian Motion Have Memory	215
6.3.2	* Decay Cascade of Mesoscopic Fluctuations Resolves the Controversy on the Generalized Efficiency of Molecular Motor	217
	References	220
 <b>Part III Applications of Stochastic Energetics</b>		
<b>7</b>	<b>Control and Energetics</b>	223
7.1	Limitations of Quasistatic Operations	224
7.1.1	* Essentially Nonquasistatic Process is Generally Caused by Crossover of Timescales $\tau_{\text{op}}$ and $\tau_{\text{sys}}$	224
7.1.2	Minimal Cost of the Operation of Single-Bit Memory is Related to the Second Law	231
7.1.3	* Essentially Nonquasistatic Process Can Take Place upon the Relaxation from Non-Gibbs Ensembles of Fluctuations	238
7.2	Detection and Control Under Fluctuations	241
7.2.1	* Two Types of Error-Free and Unbiased Detection Under Fluctuation are Possible	241
7.2.2	* The Gates to Control Particle's Access Can be Made Using Adjustable Potential Barriers	249
7.3	Discussion	250
7.3.1	Control of Open System Has Both Common and Distinguished Features with Respect to the Control of Closed System	250
	References	252
<b>8</b>	<b>Free-Energy Transducers</b>	255
8.1	Externally Controlled Free-Energy Transducers	255
8.1.1	Mesoscopic Carnot Cycle Can Be Ideal Despite Finite Works of Control	255
8.1.2	Mesoscopic Open “Carnot Cycle” Can Transform Heat into Work Without Stockage of Energy	261
8.2	Autonomous Free-Energy Transducers	266

8.2.1	Autonomous Free-Energy Transducer Functions Among Different Equilibrium Environments .....	267
8.2.2	Pairs of Sensors and Gates are Enough to Constitute an Autonomous Free-Energy Transducer .....	270
8.2.3	Structure–Function Relationship of Molecular Machines Is in the Research Domain of Stochastic Energetics .....	277
	References .....	278
<b>Appendix A</b> .....		<b>281</b>
A.1	Appendix to Chap. 1 .....	281
A.1.1	Examples of Probability Distribution: Appendix to Sect. 1.1.2.1 .....	281
A.1.2	A Particular Aspect of Gaussian Distribution: Fluctuation–Response: Appendix to Sect. 1.1.2.1 .....	282
A.1.3	Sketch of Derivation of (1.10), (1.11), and (1.12): Appendix to Sect. 1.1.2.3 .....	283
A.1.4	Derivation of (1.23): Appendix to Sect. 1.1.3.2. ....	285
A.1.5	Langevin Equation Obtained by the Method of Projection Operators: Appendix to Sect. 1.2.1.5 .....	285
A.1.6	The Distinction Between Different Types of Calculus: Appendix to Sect. 1.2.2.2 .....	287
A.1.7	Conversion of Itô’s Lemma (1.58) into Stratonovich Form: Appendix to Sect. 1.2.2.3 .....	288
A.1.8	Derivation of Fokker–Planck Equation (1.73) and Kramers Equation (1.74): Appendix to Sect. 1.2.3.1 .....	289
A.1.9	Jacobian to Transform $\xi()$ into $x()$ : Appendix to Sect. 1.3.1.1 .....	290
A.1.10	Derivation of Fluctuation–Dissipation (FD) Relation: Appendix to Sect. 1.3.1.2 .....	290
A.1.11	Derivation of (1.93) and (1.94): Appendix to Sect. 1.3.2.1 ..	291
A.1.12	Derivation of (1.108): Appendix to Sect. 1.3.3.2 .....	293
A.1.13	Derivation of the Mean First Passage Time: Appendix to Sect. 1.3.3.3 .....	293
A.2	Appendix to Chap. 2 .....	295
A.2.1	Maxwell Relation in the Fundamental Relation Assures the Existence of Thermodynamic Function: Appendix to Sect. 2.1.3.2 .....	295
A.2.2	Invariance of Thermodynamic Relations and the Choice of Reference Energy and Entropy: Appendix to Sect. 2.1.3.4	296
A.3	Appendix to Chap. 3 .....	297
A.3.1	Derivation of (3.27): Appendix to Sect. 3.3.1.4 .....	297
A.3.2	Derivation of (3.72) and (3.73): Appendix to Sect. 3.3.3.4 ..	298
A.4	Appendix to Chap. 4 .....	299
A.4.1	Derivation of (4.13): Appendix to Sect. 4.1.2.2 .....	299
A.4.2	Error in the Euler Scheme: Appendix to Sect. 4.1.2.5 .....	300

A.4.3	Derivation of (4.27): Appendix to Sect. 4.1.3.2 .....	300
A.4.4	Derivation of (4.36): Appendix to Sect. 4.2.1.1 .....	301
A.4.5	Derivation of (4.55): Appendix to Sect. 4.2.1.2 .....	302
A.4.6	Definition of the Energy of Open System: Appendix to Sect. 4.2.3.3 .....	302
A.4.7	Application of Energy Balance to Other Forms of Langevin Equation: Appendix to Sect. 4.3 .....	303
A.4.8	General Growth Process: Insertion of Functions as well as Variables: Appendix to Sect. 4.3 .....	309
A.5	Appendix to Chap. 5 .....	310
A.5.1	Statistical Mechanical Derivation of (5.19): Appendix to Sect. 5.2.1.4 .....	310
A.5.2	Quasistatic Transport of Particle: Appendix to Sect. 5.2.3 ..	311
A.5.3	Derivation of (5.37): Appendix to Sect. 5.3.1 .....	312
A.5.4	Derivation of the Fluctuation Theorem (FT): Appendix to Sect. 5.4.2 .....	314
A.6	Appendix to Chap. 6 .....	316
A.7	Appendix to Chap. 7 .....	316
A.7.1	Derivation of (7.4): Appendix to Sect. 7.1.1.4 .....	316
A.7.2	Simple Model of Aging and Plastic Flow: Appendix to Sect. 7.1.1.6 .....	317
A.8	Appendix to Chap. 8 .....	319
References	.....	319
