Holger Rauhut

Compressive Sensing and Structured Random Matrices

1 Introduction	1
2 Recovery via ℓ_1 -Minimization.....	3
2.1 Preliminaries and Notation	3
2.2 Sparse Recovery.....	5
2.3 Null Space Property and Restricted Isometry Property.....	6
2.4 Recovery of Individual Vectors	11
2.5 Coherence	12
2.6 Restricted Isometry Property of Gaussian and Bernoulli Random Matrices.....	15
3 Structured Random Matrices	16
3.1 Nonuniform versus Uniform Recovery.....	17
4 Random Sampling in Bounded Orthonormal Systems	18
4.1 Bounded Orthonormal Systems	18
4.2 Nonuniform Recovery	25
4.3 Uniform Recovery	26
5 Partial Random Circulant Matrices.....	27
6 Tools from Probability Theory.....	29
6.1 Basics on Probability	29
6.2 Moments and Tails	31
6.3 Rademacher Sums and Symmetrization	32
6.4 Scalar Khintchine Inequalities	34
6.5 Noncommutative Khintchine Inequalities	39
6.6 Rudelson's Lemma	44
6.7 Decoupling	46
6.8 Noncommutative Khintchine Inequalities for Decoupled Rademacher Chaos.....	48
6.9 Dudley's Inequality	50
6.10 Deviation Inequalities for Suprema of Empirical Processes	58
7 Proof of Nonuniform Recovery Result for Bounded Orthonormal Systems	59
7.1 Nonuniform Recovery with Coefficients of Random Signs	59
7.2 Condition Number Estimate for Column Submatrices	60
7.3 Finishing the Proof	64

8	Proof of Uniform Recovery Result for Bounded Orthonormal Systems	65
8.1	Start of Proof	65
8.2	The Crucial Lemma	66
8.3	Covering Number Estimate	69
8.4	Finishing the Proof of the Crucial Lemma	71
8.5	Completing the Proof of Theorem 8.1	73
8.6	Strengthening the Probability Estimate	74
8.7	Notes	77
9	Proof of Recovery Theorem for Partial Circulant Matrices	77
9.1	Coherence	77
9.2	Conditioning of Submatrices	79
9.3	Completing the Proof	82
10	Appendix	83
10.1	Covering Numbers for the Unit Ball	83
10.2	Integral Estimates	84
	Bibliography	85

Massimo Fornasier

Numerical Methods for Sparse Recovery

1	Introduction	93
1.1	Notations	94
2	An Introduction to Sparse Recovery	95
2.1	A Toy Mathematical Model for Sparse Recovery	95
2.2	Survey on Mathematical Analysis of Compressed Sensing	100
3	Numerical Methods for Compressed Sensing	107
3.1	Direct and Iterative Methods	108
4	Numerical Methods for Sparse Recovery	137
4.1	Iterative Soft-Thresholding in Hilbert Spaces	138
4.2	Principles of Acceleration	145
5	Large Scale Computing	155
5.1	Domain Decomposition Methods for ℓ_1 -Minimization	155
5.2	Domain Decomposition Methods for Total Variation Minimization	169
	Bibliography	195

Ronny Ramlau, Gerd Teschke

Sparse Recovery in Inverse Problems

1	Introduction	201
1.1	Road Map of the Chapter	202
1.2	Remarks on Sparse Recovery Algorithms	202

2	Classical Inverse Problems	204
2.1	Preliminaries	205
2.2	Regularization Theory	209
3	Nonlinear Approximation for Linear Ill-Posed Problems	212
3.1	Landweber Iteration and Its Discretization	212
3.2	Regularization Theory for A-Priori Parameter Rules	215
3.3	Regularization Theory by A-Posteriori Parameter Rules	217
4	Tikhonov Regularization with Sparsity Constraints	221
4.1	Regularization Result for A-Priori Parameter Rules	222
4.2	Convergence Rates for A-Priori Parameter Rules	223
4.3	Regularization Result for A-Posteriori Parameter Rules	226
4.4	Convergence Rates for A-Posteriori Parameter Rules	229
5	Iterated Shrinkage for Nonlinear Ill-Posed Problems	230
5.1	Properties of the Surrogate Functional	231
5.2	Minimization of the Surrogate Functionals	232
5.3	Convergence Properties	234
5.4	Application of Sparse Recovery to SPECT	236
6	Projected Accelerated Steepest Descent for Nonlinear Ill-Posed Problems ...	240
6.1	Preliminaries	242
6.2	Projected Steepest Descent and Convergence	242
6.3	Some Algorithmic Aspects	250
6.4	Numerical Experiment: A Nonlinear Sensing Problem	252
	Bibliography	259

Antonin Chambolle, Vicent Caselles, Daniel Cremers, Matteo Novaga, Thomas Pock

An Introduction to Total Variation for Image Analysis

1	The Total Variation	263
1.1	Why Is the Total Variation Useful for Images?	263
1.2	Some Theoretical Facts: Definitions, Properties	270
1.3	The Perimeter. Sets with Finite Perimeter	276
1.4	The Co-area Formula	279
1.5	The Derivative of a BV Function	280
2	Some Functionals Where the Total Variation Appears	283
2.1	Perimeter Minimization	283
2.2	The Rudin–Osher–Fatemi Problem	284
3	Algorithmic Issues	297
3.1	Discrete Problem	297
3.2	Basic Convex Analysis – Duality	299
3.3	Gradient Descent	305
3.4	Augmented Lagrangian Approaches	310
3.5	Primal-dual Approaches	310

3.6	Graph-cut Techniques	313
3.7	Comparisons of the Numerical Algorithms	314
4	Applications	317
4.1	Total Variation Based Image Deblurring and Zooming	317
4.2	Total Variation with L^1 Data Fidelity Term	318
4.3	Variational Models with Possibly Nonconvex Data Terms	319
4.4	The Minimal Partition Problem	327
A	A Proof of Convergence	331
	Bibliography	335
