1	Introduction	1
	Gabriela Slavcheva and Philippe Roussignol	
Part I Carrier dynamics in quantum dots		
2	Decoherence of intraband transitions in InAs quantum dots	9
	Thomas Grange, Robson Ferreira and Gérald Bastard	
2.1	Introduction	9
2.2	Electronic states of self-organized quantum dots	10
2.3	Magneto-polaron states in charged QDs.....	12
2.4	Anharmonic decay of polaron states	14
2.5	Time resolved studies of pure dephasing in QDs	16
2.6	Conclusion	22
	References	23
3	Spectral diffusion dephasing and motional narrowing in single semiconductor quantum dots	25
	Guillaume Cassaboïs	
3.1	Introduction	25
3.2	Theory	26
3.2.1	Random telegraph noise	27
3.2.2	Gaussian stochastic noise	28
3.3	Experiments	29
3.3.1	Unconventional motional narrowing	30
3.3.2	Voltage-controlled conventional motional narrowing	32
3.4	Conclusion	34
	References	35

Part II Optically-induced spin coherence in quantum dots

4	Carrier spin dynamics in self-assembled quantum dots	39
	Edmund Clarke, Edmund Harbord and Ray Murray	
4.1	Introduction	40
4.2	Growth and optical properties of In(Ga)As/GaAs QDs	41
4.3	Spin generation and detection	46
4.4	Spin relaxation and dephasing mechanisms in QDs	48
4.5	Outlook	54
	References	55
5	Optically induced spin rotations in quantum dots	63
	Sophia E. Economou and Thomas L. Reinecke	
5.1	Introduction	63
5.2	Useful concepts	65
5.2.1	Spin state as vector on Bloch sphere	65
5.2.2	Composite rotations	65
5.3	rf control of spin in quantum dots	66
5.4	Optical control of spin in quantum dots	67
5.4.1	Energy levels and selection rules	68
5.4.2	Optical spin rotations	69
5.5	Optical spin rotation proposals	71
5.5.1	Optical Stark effect based rotation	71
5.5.2	Adiabatic approaches to spin rotation	71
5.5.3	Hyperbolic secant based rotations	72
5.6	Outlook	79
	Appendix	79
5.6.1	Fidelity	79
5.6.2	Coherent Population Trapping	80
	References	82
6	Ensemble spin coherence of singly charged InGaAs quantum dots	85
	Alex Greilich, Dmitri R. Yakovlev and Manfred Bayer	
6.1	Introduction	85
6.2	Experimental technique	88
6.3	Exciton fine structure	91
6.3.1	Fine structure of heavy-hole exciton	91
6.3.2	Linear dichroism in longitudinal magnetic field	93
6.3.3	Circular dichroism in transverse magnetic field	94
6.3.4	Spectral dependence of the electron g -factor	95
6.3.5	Anisotropy of electron g -factor in quantum dot plane	96
6.4	Generation of spin coherence	97
6.5	Mode-locking of spin coherence	100
6.5.1	Spin coherence time of an individual electron	101
6.5.2	Mechanism of spin synchronization	102
6.5.3	Tailoring of ensemble spin precession	104

6.5.4	Temperature dependence of electron spin coherence time	108
6.6	Nuclei induced frequency focusing	109
6.7	Collective single-mode precession	115
6.8	Ultrafast optical spin rotation	119
6.9	Conclusions	125
	References	125

Part III Novel systems for coherent spin manipulation

7	Optically controlled spin dynamics in a magnetically doped quantum dot	131
	Doris E. Reiter, Tilmann Kuhn and Vollrath M. Axt	
7.1	Introduction	132
7.2	Model System of a single dot doped with a single Mn atom	133
7.3	Spin flip in the heavy hole exciton system using π and 2π pulses	136
7.4	Switching into all Mn spin states	140
7.4.1	Switching into spin eigenstates	140
7.4.2	Measurement by pump probe spectroscopy	143
7.4.3	Switching into superposition states	145
7.5	Magnetic field in Voigt configuration	146
7.6	Conclusions	149
	References	149
8	Coherent magneto-optical activity in a single carbon nanotube	151
	Gabriela Slavcheva and Philippe Roussignol	
8.1	Introduction	152
8.2	Problem Formulation	154
8.2.1	Dielectric response function of an isolated SWCNT	157
8.2.2	Optical dipole matrix element for circularly polarised light	158
8.3	Theoretical framework for the natural optical activity	159
8.4	Simulation results for the natural optical activity	163
8.5	Magneto-optical activity of a chiral SWCNT in an axial magnetic field	171
8.5.1	Theoretical model of the nonlinear Faraday rotation in an axial magnetic field	172
8.5.2	Simulation results for Faraday rotation	176
8.6	Conclusions	178
	References	179
9	Exciton and spin coherence in quantum dot lattices	181
	Michal Grochol, Eric M. Kessler, and Carlo Piermarocchi	
9.1	Introduction	182
9.2	Theory	183
9.2.1	Neutral quantum dot lattice	183
9.2.2	Charged quantum dot lattice	191

9.2.3	Neutral quantum dots in lattice of optical cavities	194
9.3	Results and discussion	199
9.3.1	Neutral quantum dot lattice	199
9.3.2	Charged quantum dot lattice	203
9.3.3	Neutral quantum dots in lattice of cavities	205
9.4	Conclusions	210
	References	210

Part IV Coherent light-matter states in semiconductor microcavities

10	Quantum optics with interacting polaritons	215
	Stefano Portolan and Salvatore Savasta	
10.1	Introduction	216
10.2	Electronic excitation in semiconductor	217
10.3	Linear and nonlinear dynamics	222
10.4	Entangled photon pairs from the optical decay of biexcitons	229
10.5	The picture of interacting polaritons	231
10.6	Noise and environment: Quantum Langevin approach	234
10.7	Quantum complementarity of cavity polaritons	243
10.8	Coherent Trapping	248
10.9	Spin-entangled cavity polaritons	250
10.10	Emergence of entanglement out of a noisy environment: The case of microcavity polaritons	251
10.10.1	Coherent and incoherent polariton dynamics	252
10.10.2	Results	256
10.11	Outlook	260
	References	260
11	Spontaneous coherence within a gas of exciton-polaritons in Telluride microcavities	265
	Maxime Richard, Michiel Wouters and Le Si Dang	
11.1	Introduction	266
11.2	Formation and steady state of a polariton gas	267
11.3	Momentum distribution, polariton thermalization	269
11.4	Similarities and differences between polariton condensation, polariton lasing and conventional photon lasing	270
11.5	Spatial properties	272
11.5.1	Gross-Pitaevskii equation	272
11.5.2	Small size condensate	274
11.5.3	Polariton condensate in disordered environment	275
11.6	Vortices in polariton condensates	278
11.6.1	Quantized vortices	279
11.6.2	Half-quantized vortices	282
11.7	Correlations within a degenerate polaritons gas	283
11.7.1	Spatial first order correlations	283
11.7.2	Number fluctuations in a polariton condensate	285

11.8	Conclusion and Outlook	287
	References	288
12	Keldysh Green's function approach to coherence in a non-equilibrium steady state: connecting Bose-Einstein condensation and lasing	293
	Jonathan Keeling, Marzena H. Szymańska and Peter B. Littlewood	
12.1	Introduction	293
12.2	Polariton system Hamiltonian, and coupling to baths	297
12.3	Modelling the non-equilibrium system	298
	12.3.1 Non-equilibrium diagram approach	299
	12.3.2 Mean-field condition for coherent state	300
12.4	Effects of baths on system correlation functions	301
	12.4.1 Decay bath and $\langle \Psi_p \rangle$	301
	12.4.2 Pumping bath and $G_{a^\dagger b}^K$	303
12.5	Mean-field theory and its limits	305
	12.5.1 Equilibrium limit of Mean-field theory	306
	12.5.2 High temperature limit of Mean-field theory - simple laser	308
	12.5.3 General properties of mean-field theory away from extremes	310
	12.5.4 Low density limit: recovering complex Gross-Pitaevskii equation	311
12.6	Fluctuations, and instability of the normal state	312
	12.6.1 Photon Green's functions in the non-equilibrium model	312
	12.6.2 Normal-state Green's functions and instability	316
	12.6.3 Normal-state instability for a simple laser	320
12.7	Fluctuations of the condensed system	322
	12.7.1 Finite-size effects – lineshape of trapped system	324
12.8	Summary	326
