

# Table of contents

|  |           |
|--|-----------|
| <b>1 Introduction</b>                                  | <b>23</b> |
| 1.1 Overview of the S7-1500 automation system          | 23        |
| 1.1.1 SIMATIC S7-1500 programmable controller          | 24        |
| 1.1.2 Overview of STEP 7 Professional V12              | 25        |
| 1.1.3 Various programming languages                    | 27        |
| 1.1.4 Execution of the user program                    | 29        |
| 1.1.5 Data management in the SIMATIC automation system | 31        |
| 1.2 Introduction to STEP 7 Professional V12            | 32        |
| 1.2.1 Installing STEP 7                                | 32        |
| 1.2.2 Automation License Manager                       | 33        |
| 1.2.3 Starting STEP 7 Professional                     | 33        |
| 1.2.4 Portal view                                      | 33        |
| 1.2.5 The windows of the Project view                  | 35        |
| 1.2.6 Help information system                          | 37        |
| 1.2.7 Adapting the user interface                      | 37        |
| 1.3 Editing a SIMATIC project                          | 38        |
| 1.3.1 Structured representation of project data        | 39        |
| 1.3.2 Project data and editors for a PLC station       | 39        |
| 1.3.3 Creating and editing a project                   | 43        |
| 1.3.4 Working with reference projects                  | 45        |
| 1.3.5 Creating and editing libraries                   | 46        |
| <b>2 SIMATIC S7-1500 automation system</b>             | <b>47</b> |
| 2.1 S7-1500 station components                         | 47        |
| 2.2 S7-1500 CPUs                                       | 49        |
| 2.2.1 CPU versions                                     | 49        |
| 2.2.2 Control and display elements                     | 49        |
| 2.2.3 SIMATIC Memory Card                              | 51        |
| 2.2.4 Memory areas in an S7-1500 station               | 52        |
| 2.2.5 Bus interfaces                                   | 54        |
| 2.3 Signal modules                                     | 55        |
| 2.3.1 Digital input modules                            | 55        |
| 2.3.2 Digital output modules                           | 56        |
| 2.3.3 Analog input modules                             | 57        |
| 2.3.4 Analog output modules                            | 57        |
| 2.4 Technology modules                                 | 58        |
| 2.5 Communication modules                              | 59        |
| 2.6 Other modules                                      | 60        |
| 2.6.1 System power supply modules                      | 60        |
| 2.6.2 Load power supply modules                        | 60        |

|   |     |
|---|-----|
| <b>3 Device configuration</b>                                       | 61  |
| 3.1 Introduction  | 61  |
| 3.2 Configuring a station   | 63  |
| 3.2.1 Adding a PLC station  | 63  |
| 3.2.2 Adding a module   | 63  |
| 3.3 Parameterization of modules                                     | 65  |
| 3.3.1 Parameterization of CPU properties                            | 65  |
| 3.3.2 Addressing modules  | 68  |
| 3.3.3 Assigning parameters to signal modules                        | 70  |
| 3.4 Configuring a network   | 73  |
| 3.4.1 Introduction, overview  | 73  |
| 3.4.2 Networking a station  | 74  |
| 3.4.3 Node addresses in a subnet                                    | 76  |
| 3.4.4 Communication services and types of connection                | 76  |
| 3.4.5 Configuring a connection                                      | 78  |
| 3.4.6 Configuring a PROFINET subnet                                 | 80  |
| 3.4.7 Configuring a PROFIBUS subnet                                 | 84  |
| <b>4 Tags, addressing, and data types</b>                           | 86  |
| 4.1 Operands and tags   | 86  |
| 4.1.1 Introduction, overview  | 86  |
| 4.1.2 Operand areas: inputs and outputs                             | 87  |
| 4.1.3 Operand area: bit memory                                      | 90  |
| 4.1.4 Operand area: data  | 92  |
| 4.1.5 Operand area: temporary local data                            | 93  |
| 4.2 Addressing of operands and tags                                 | 94  |
| 4.2.1 Signal path   | 94  |
| 4.2.2 Absolute addressing   | 95  |
| 4.2.3 Symbolic addressing   | 98  |
| 4.2.4 Addressing of a tag area                                      | 99  |
| 4.2.5 Addressing a constant   | 99  |
| 4.3 Indirect addressing   | 100 |
| 4.3.1 Overview  | 100 |
| 4.3.2 Indirect addressing of ARRAY components                       | 100 |
| 4.3.3 Indirect addressing of a tag in an ARRAY DB                   | 102 |
| 4.3.4 Indirect addressing of a data block                           | 102 |
| 4.3.5 Indirect addressing with an ANY pointer                       | 103 |
| 4.3.6 Indirect addressing with PEEK and POKE (SCL)                  | 105 |
| 4.4 Addressing of hardware objects                                  | 107 |
| 4.5 General information on data types                               | 107 |
| 4.5.1 Overview of data types  | 107 |
| 4.5.2 Implicit data type conversion                                 | 108 |
| 4.5.3 Overlaying tags (data type views)                             | 111 |
| 4.6 Elementary data types   | 113 |
| 4.6.1 Bit-serial data types BOOL, BYTE, WORD, DWORD, and LWORD      | 113 |
| 4.6.2 Data type CHAR  | 113 |
| 4.6.3 BCD numbers BCD16 and BCD32                                   | 115 |
| 4.6.4 Fixed-point data types without sign USINT, UINT, UDINT, ULINT | 116 |
| 4.6.5 Fixed-point data types with sign SINT, INT, DINT, and LINT    | 117 |

|  |            |
|--|------------|
| 4.6.6 Floating-point data types REAL and LREAL     | 118        |
| 4.6.7 Data types for durations                     | 120        |
| 4.6.8 Data types for points in time                | 121        |
| 4.7 Structured data types                          | 123        |
| 4.7.1 Date and time DATE_AND_TIME (DT)             | 123        |
| 4.7.2 Date and time DATE_AND_LTIME (DTL)           | 125        |
| 4.7.3 STRING data type                             | 125        |
| 4.7.4 Data type ARRAY                              | 126        |
| 4.7.5 Data type STRUCT                             | 129        |
| 4.8 Parameter types                                | 129        |
| 4.8.1 Overview                                     | 129        |
| 4.8.2 TIMER and COUNTER parameter types            | 131        |
| 4.8.3 Parameter types for IEC timer functions      | 132        |
| 4.8.4 Parameter types for IEC counter functions    | 132        |
| 4.8.5 Parameter types BLOCK_FC and BLOCK_FB (STL)  | 132        |
| 4.8.6 Parameter type DB_ANY                        | 133        |
| 4.8.7 Parameter type VOID                          | 133        |
| 4.8.8 Parameter types POINTER, ANY, and VARIANT    | 134        |
| 4.9 Pointer  | 134        |
| 4.9.1 Introduction                                 | 134        |
| 4.9.2 Area pointer                                 | 135        |
| 4.9.3 DB pointer                                   | 135        |
| 4.9.4 ANY pointer                                  | 135        |
| 4.10 PLC data types                                | 137        |
| 4.10.1 Programming a PLC data type                 | 137        |
| 4.10.2 Using a PLC data type                       | 138        |
| 4.10.3 Comparing PLC data types                    | 138        |
| 4.11 System data types                             | 139        |
| 4.11.1 System data types for IEC timer functions   | 139        |
| 4.11.2 System data types for IEC counter functions | 140        |
| 4.11.3 Data type ERROR_STRUCT                      | 141        |
| 4.11.4 Start information                           | 142        |
| 4.12 Hardware data types                           | 143        |
| <b>5 Program execution</b>                         | <b>144</b> |
| 5.1 Operating states of the CPU                    | 144        |
| 5.1.1 STOP operating state                         | 145        |
| 5.1.2 STARTUP operating state                      | 146        |
| 5.1.3 RUN operating state                          | 148        |
| 5.1.4 Retentive behavior of operands               | 148        |
| 5.2 Creating a user program                        | 149        |
| 5.2.1 Program draft                                | 149        |
| 5.2.2 Program execution                            | 153        |
| 5.3 Programming blocks                             | 155        |
| 5.3.1 Block types                                  | 155        |
| 5.3.2 Block properties                             | 157        |
| 5.3.3 Block interface                              | 157        |
| 5.3.4 Programming block parameters                 | 161        |

---

|   |            |
|---|------------|
| 5.4 Calling blocks  | 163        |
| 5.4.1 General information on calling of code blocks                 | 163        |
| 5.4.2 Supplying the block parameters                                | 165        |
| 5.4.3 Calling a function (FC)                                       | 166        |
| 5.4.4 Calling a function block (FB)                                 | 167        |
| 5.4.5 "Passing on" of block parameters                              | 168        |
| 5.5 Startup program   | 169        |
| 5.5.1 Startup organization blocks                                   | 169        |
| 5.5.2 Resetting retentive data                                      | 170        |
| 5.5.3 Determining a module address                                  | 171        |
| 5.5.4 Parameterization of modules                                   | 174        |
| 5.6 Main program  | 177        |
| 5.6.1 Main program organization blocks                              | 177        |
| 5.6.2 Process image updating  | 179        |
| 5.6.3 Cycle time  | 182        |
| 5.6.4 Response time   | 184        |
| 5.6.5 Stopping and delaying the program                             | 186        |
| 5.6.6 Time  | 187        |
| 5.6.7 Read system time  | 191        |
| 5.6.8 Runtime meter   | 191        |
| 5.7 Interrupt processing  | 192        |
| 5.7.1 Introduction to interrupt processing                          | 192        |
| 5.7.2 Time-of-day interrupts  | 196        |
| 5.7.3 Time-delay interrupts   | 200        |
| 5.7.4 Cyclic interrupts   | 203        |
| 5.7.5 Hardware interrupts   | 207        |
| 5.7.6 Assigning interrupts during runtime                           | 209        |
| 5.7.7 Reading additional interrupt information                      | 210        |
| 5.8 Error handling  | 212        |
| 5.8.1 Causes of errors and error responses                          | 212        |
| 5.8.2 Local error handling  | 213        |
| 5.8.3 Global error handling (synchronous error)                     | 215        |
| 5.8.4 Enabling and disabling synchronous error processing           | 218        |
| 5.8.5 Asynchronous errors   | 220        |
| 5.8.6 Disable, delay, and enable interrupts and asynchronous errors | 223        |
| 5.9 Diagnostics in the user program                                 | 225        |
| 5.9.1 Diagnostics interrupt   | 226        |
| 5.9.2 Read start information  | 227        |
| 5.9.3 Diagnostic functions in the user program                      | 228        |
| 5.10 Configuring alarms   | 235        |
| 5.10.1 Introduction   | 235        |
| 5.10.2 Configuring alarms according to the alarm number procedure   | 238        |
| 5.10.3 Blocks for programming alarms                                | 242        |
| 5.10.4 CPU alarm display  | 244        |
| <b>6 Program editor</b>   | <b>247</b> |
| 6.1 Introduction  | 247        |
| 6.2 PLC tag table   | 248        |
| 6.2.1 Creating and editing a PLC tag table                          | 248        |

|          |  |            |
|----------|--|------------|
| 6.2.2    | Defining and processing PLC tags                           | 248        |
| 6.2.3    | Comparing PLC tag tables                                   | 251        |
| 6.2.4    | Exporting and importing a PLC tag table                    | 252        |
| 6.2.5    | Constants tables   | 252        |
| 6.3      | Programming a code block                                   | 253        |
| 6.3.1    | Creating a new code block                                  | 253        |
| 6.3.2    | Working area of the program editor for code blocks         | 254        |
| 6.3.3    | Specifying code block properties                           | 256        |
