

Contents

1	Introduction	1
1.1	Definition of Purity	2
1.2	Graduation of Gases	4
1.2.1	Graduation According to Physical Data	4
1.2.2	Graduation According to Other Characteristics	7
1.2.3	Standard Conditions	7
1.3	Regulations and Standard Publications	8
2	Introduction to the Physics of Gases.....	11
2.1	The Ideal Gas	11
2.1.1	State Equations.....	12
2.1.2	Kinetic Gas Theory	15
2.1.3	Enthalpy	16
2.2	The Real Gas.....	17
2.2.1	Equations of State.....	19
2.2.2	The Liquefied Gas.....	22
2.2.3	Diverse Properties	25
2.3	Gas Mixtures	29
2.4	Moisture Content.....	31
2.5	Leak Rate	34
3	Manufacturing and Purification	39
3.1	Physical Processes.....	41
3.1.1	Distillation.....	41
3.1.2	Rectification	46
3.1.3	Adsorption.....	50
3.1.4	Permeation	61
3.1.5	Isotope Separation.....	65
3.2	Chemical and Electro-chemical Procedures.....	67
3.2.1	Heterogeneous Catalysis	67
3.2.2	Electrolyses	70

3.2.3	Syntheses	72
3.2.4	Gas Washing	74
3.3	Getter and Gas Purifier.....	77
3.4	Filter	81
4	Filling Manifolds	85
4.1	Filling Manifolds for Pure Gases	85
4.1.1	Compressed Pure Gases	87
4.1.2	Liquefied Gases.....	91
4.2	Tips for the Construction of Stations	92
4.2.1	Pressure Vessels and Pressure Piping.....	92
4.2.2	Valves and Fittings.....	98
4.2.3	Pumps and Compressors	110
4.2.4	Measurement and Control Technology	118
5	Mixtures of Pure Gases.....	121
5.1	Static Procedures	122
5.1.1	Gravimetric Procedure	122
5.1.2	Manometric and Volumetric Procedures.....	130
5.1.3	Homogenization and Separation	132
5.1.4	Mixtures of Flammable and Oxidizing Gases	135
5.2	Dynamic Process	141
6	Compressed Gas Cylinders.....	143
6.1	Types and Conditions.....	143
6.2	Accessories.....	146
6.3	Marking	150
6.4	Preparation for Filling.....	151
7	Analysis of Purity and Composition	155
7.1	Metrological Certainty	156
7.2	Error Analysis	157
7.2.1	Mean, Error and Error Propagation	158
7.2.2	Determining Expanded Uncertainty	161
7.2.3	Poisson Distribution	162
7.2.4	Noise and Limit of Detection	163
7.2.5	Stability of a Gas Mixture	165
7.3	Instrumental Analysis.....	165
7.3.1	Mass Spectrometry.....	166
7.3.2	Chromatographic Methods	172

7.3.3	Spectroscopic Methods	180
7.3.4	Electro-Analytical Methods	188
7.3.5	Moisture Measurement.....	193
7.3.6	Determination of Oil	198
7.4	Chemical Absolute Methods	199
7.5	Particle Measurement.....	200
7.6	Automation of Complex Systems.....	202
7.7	Testing Relevance to Application Technology	204
8	Handling.....	205
8.1	Tips for Transport, Storage and Gas Withdrawal.....	205
8.2	Fittings and Equipment for Gas Withdrawal.....	207
8.3	Gas Mixtures at the User	210
8.4	Purification at the “Point of Use”	213
9	Data Sheets.....	215
9.1	Classification and Limiting Values	215
9.2	Physical-Technical Data.....	218
9.3	Synonyms and Data Sheets	220
10	Appendix	469
10.1	Important Physical Constants	469
10.2	International Units (SI)	469
10.3	Pressure Units	471
10.4	Material Data on the Vapour-Pressure Curve	472
10.5	Constants of the Vapour Pressure Equation	488
10.6	Compressibility Factor	494
10.7	Vapour Pressure over Ice	494
10.8	Student Fischer Factor (t Distribution).....	495
10.9	C-t Values of Toxicity.....	496
10.10	Marking Gas Cylinders	498
10.10.1	Precautionary Labels.....	498
10.11	Gas Cylinders – Colour Coding	501
10.12	Cylinder Valve Outlets.....	501
10.12.1	Filling Pressure 200 Bar.....	501
10.12.2	Filling Pressure 300 Bar.....	503
10.12.3	DISS Connections	504
10.13	Initials for CFCs	505
10.13.1	Carbon Compounds	505

10.13.2 Azeotropic and Non-azeotropic Mixtures	507
10.13.3 Various Organic and Inorganic Compounds	507
Symbols and Abbreviations	509
Subject Index.....	517
