Chapter 1 The Anterior Mandible	1
3D diagnosis and planning	2
Pronounced residual ridge atrophy	2
Shortage of space, insufficient distance to the neighboring teeth	4
Single-tooth gap	5
Typical treatment course	6
Late implant placement with immediate loading	6
Atypical treatment course – problematic baseline situation	9
Immediate implant placement following extraction	9
<i>Note: Narrow and high gap between neighboring teeth</i>	12
Problems and complications	13
Horizontal augmentation of a knife-edge residual ridge	13
Immediate restoration	16
Immediate implant placement and immediate loading	16
Multi-tooth gap	18
Typical treatment course	18
Replacement of three incisors on two implants	18
Atypical treatment course – problematic baseline situation	22
Preventive horizontal augmentation	22
Problems and complications	26
Implant placement in an extensive bone defect	26
Immediate loading	30
Immediate fixed partial denture loaded onto definitive implants	30
Flapless implant placement and augmentation with immediate loading	34
Chapter 2 The Posterior Mandible	39
3D diagnosis and SimPlant planning	40
3D planning of a single-tooth implant	40
3D planning of a free-end situation	42
Single-tooth gap	44
Typical treatment course	45
Replacing a molar with two implants	45
Replacement of a molar with an implant with vertical mucosal distraction	47
Atypical treatment course – problematic baseline situation	50
Replacement of a molar with one implant in a large gap	50
Problems and complications	54
Fracture of a non-WP implant	54
<i>Note: Iatrogenic complication with nerve involvement</i>	58
Immediate loading	60
Immediate provisional loading of a definitive implant	60

Multi-tooth gap and free-end situation	63
Typical treatment course	63
Two-session approach with augmentation	63
Atypical treatment course – problematic baseline situation	67
Single-session approach with augmentation and transmucosal healing	67
Large bone defect following the loss of implants	70
Problems and complications	75
Fracture of an implant with a tooth/implant-supported fixed partial denture	75
Failed augmentation with a bone block in a patient with an extremely narrow residual ridge	79
Immediate loading of provisional implants	85
Typical treatment course	85
Bilateral free-end situation	85
Atypical treatment course	88
Customizing provisional implants	88
Problems and complications	93
Loosened blade implant, provisional implants to protect the augmentation material	93
Immediate loading of definitive implants	98
3D implant planning and its surgical implementation	98
Diagnostic possibilities of cone beam CT imaging	98
Stereolithographic surgical guides	102
Implant placement with the stereolithographic SurgiGuide surgical template	106
Navigation technique	109
Chapter 3 The Edentulous Mandible	111
Diagnosis	112
3D CBCT diagnosis and SimPlant planning	112
3D diagnosis and SimPlant planning for the fabrication of the Sliwowski Overdenture System (SOS) SurgiGuide template	114
<i>Note. Extremely narrow mandible</i>	117
Rehabilitation with implant placement only in the interforaminal region	118
Removable prostheses on two implants	119
Typical treatment course	119
Removable immediate prosthesis on two implants and one prefabricated bar – the SOS method	119
<i>Notes on the SOS method</i>	127
Atypical treatment course – problematic baseline situation	128
Treatment of an extremely narrow residual ridge with the SOS method	128
SOS with osteoplasty and augmentation	132
Immediate implant placement following extraction and direct loading with SOS without a template	136
Problems and complications	141
Early loss of an SOS implant and re-implantation	141
Large mandibular defect and unexpected complication due to a slight change in position of the template	150
<i>Note on impression taking</i>	155

Removable prostheses on several implants	156
Typical treatment course	156
Immediate fixed bridge on five implants and definitive bar-retained restoration	156
<i>Note: Connecting bar with a locking mechanism</i>	160
Atypical treatment course – problematic baseline situation	161
Immediate loading with a provisional bar and an age-appropriate, definitive telescopic crown-retained prosthesis	161
Problems and complications	165
Inadequate dental prosthesis on two non-preservable implants – implant re-insertion and immediate loading	165
Fixed bridges on several implants	169
Typical treatment course	169
Fixed immediate bridge – implant placement with a 3D template	169
Atypical treatment course – problematic baseline situation	175
Extraction, immediate implant placement and immediate fixed bridge	175
Immediate fixed bridge loaded onto provisional implants	180
Problems and complications	185
Destruction of the residual ridge due to peri-implantitis	185
Removal of an incorrectly placed implant	190
Full rehabilitation including implant placement in the posterior mandible	194
Typical treatment course	195
Fixed bridges for prosthetic restoration of the entire mandible	195
Immediate mandibular prosthetic restoration loaded onto provisional implants	198
Atypical treatment course – problematic baseline situation	201
Fixed immediate prosthesis following extensive dental treatment and augmentation	201
Selective extractions for the optimal positioning of definitive implants	205
Problems and complications	210
Premature loosening of provisional implants	210
Iatrogenic complication during the removal of provisional implants and peri-implantitis after 10 years of functional use	214
Immediate loading of definitive implants	221
Immediate loading of permanent implants with a fixed bridge	221
Chapter 4 The Anterior Maxilla	227
Diagnosis with esthetic considerations	228
3D diagnosis and SimPlant planning	230
Single-tooth replacement	233
Typical treatment course	233
Single-tooth implant – Simpler in Practice technique	233
<i>Note Simpler in Practice Technique</i>	237
<i>Fabrication of the provisional restoration – Simpler in Practice</i>	237
Esthetic requirements dictated by a high smile line	240
Atypical treatment course – problematic baseline situation	245
Single-tooth implants in an adolescent girl presenting with shortage of space	245
<i>Note Implants in adolescents</i>	250
Emergency implant placement following traumatic loss of an anterior tooth	251

Problems and complications	255
Spontaneous perforation of the mucosa	255
<i>Note: Fracture risk of ceramic abutments</i>	258
Biological and mechanical complications: suture dehiscence and loosening of the screw retention	259
Development of an apical cyst at an anterior dental implant	262
Immediate loading of a single-tooth implant in the presence of a well-preserved residual ridge	266
Immediate implant placement and immediate loading following extraction of the primary canines	266
Immediate restoration of a single-tooth implant	270
Immediate implant placement following an inflammatory process around tooth 22	270
Premolar implants and several single-tooth implants	274
Premolar implant in a patient with a high smile line	274
Several single-tooth gaps following traumatic tooth loss	277
Restoration of several single-tooth gaps	282
 Restoration of multi-tooth gaps	286
 Typical treatment course	286
Replacement of four missing incisors on four implants	286
Replacement of four missing incisors on two implants	289
Atypical treatment course – problematic baseline situation	291
Restoration of a multi-tooth gap with preservation of the anatomical structures	291
<i>Note The "corkscrew technique"</i>	294
Simultaneous immediate and delayed implant placement to replace two central incisors	298
Problems and complications	305
Implant treatment following the loss of an implant-supported restoration	305
<i>Note: Mucosal graft technique</i>	310
Immediate restoration loaded onto provisional implants following loss of the old implant-supported restoration	312

Chapter 5 The Posterior Maxilla

319

 Diagnosis	320
Conventional diagnosis	320
Fabrication of a radiologic or surgical template	320
<i>Note. Shaping the surgical template</i>	323
3D diagnosis and planning	324
 Restoration of single- and multi-tooth gaps	327
 Typical treatment course	327
Fixed bridge with multiple abutments	327
<i>Note Cosine curve technique to improve the gingival situation</i>	330
Atypical treatment course – problematic baseline situation	331
Restoration in a case of pronounced, one-sided residual ridge atrophy	331
<i>Note: The cast coping laboratory method (relating to the case history on page 331)</i>	338
Sinus floor elevation with vertical and horizontal augmentation and single-tooth implant with orthodontic treatment	340
Problems and complications	347
Sinus floor elevation with reconstruction of the residual ridge and gingiva	347
Implant treatment after sinus floor elevation in two sessions	353
Immediate loading	359
Immediate loading of a restoration on both provisional implants and natural teeth	359

<i>Note Aligning IPIs</i>	363
Sinus floor elevation with horizontal augmentation, implant placement and immediate restoration loaded onto IPIs	364
Immediate restoration supported on definitive implants and one natural tooth	368
Free-end situation	371
Simple treatment course (without sinus floor elevation)	371
Restoration in the form of an abbreviated dental arch without sinus floor elevation	371
Implant placement without sinus floor elevation with a 3D template	373
Typical treatment course	378
Sinus floor elevation with lateral augmentation and mucosal distraction	378
<i>Note: Sinus elevation (sinus floor elevation, sinus lift)</i>	383
Implant placement with sinus floor elevation using the two-session approach	385
Atypical treatment course – problematic baseline situation	389
Implant placement with sinus floor elevation accompanied by concomitant apicoectomy and lateral bone augmentation	389
Extensive augmentation in several directions	394
Problems and complications	399
Sinus floor elevation involving avoidance of a blood vessel and perforation of the maxillary sinus mucosa	399
Apical granuloma on a smooth machined implant	404
Immediate loading	409
Immediate restoration with concomitant sinus floor elevation	409
Sinus floor elevation, implant placement and immediate restoration loaded onto IPIs	414

Chapter 6 The Edentulous Maxilla

419

3D diagnosis with a custom template	420
<i>Note on the stabilization of the template</i>	423
Rehabilitation without reconstruction of the posterior maxilla	424
Typical treatment course	424
Bar connector restoration on six implants	424
<i>Note: Exposure technique</i>	427
Cantilever implant bridge on nine implants	428
Atypical treatment course – problematic baseline situation	430
Removable restoration – incidental finding by CT imaging	430
Problems and complications	433
Fixed restoration with a change in implant inclination – a mechanical complication	433
<i>Note: Mechanical complications</i>	436
Immediate loading	437
Immediate loading of definitive implants with NobelGuide	437
<i>Note: Immediate restoration on healing abutments</i>	440
Rehabilitation with reconstruction of the posterior maxilla	442
Typical treatment course	442
Sinus floor elevation and implant placement in a single session	442
Severe residual ridge atrophy: sinus floor elevation and vertical augmentation prior to implant placement	447
<i>Note: Several augmentative procedures in one operation</i>	455

Atypical treatment course – problematic baseline situation	457
Extremely problematic baseline situation following the loss of sinus augmentation material and implants	457
Extreme residual ridge atrophy, sinus floor elevation with no bony sinus floor	464
Problems and complications	467
Severe horizontal residual ridge atrophy and loss of an implant	467
Sinus floor elevation and implant placement following loss of the old implants	473
Immediate loading	480
Typical treatment course	480
Immediate restoration of provisional implants following extraction	480
Immediate restoration with sinus floor elevation and implant placement	489
Atypical treatment course – problematic baseline situation	492
Sinus floor elevation and subsequent implant placement with immediate restoration loaded onto mixed implants	492
Sinus floor elevation with immediate restoration of provisional implants and no definitive implants	496
Problems and complications	501
Premature loss of provisional implants	501
Sinus floor elevation and immediate restoration loaded onto provisional implants, implant loss during the healing phase	508
Chapter 7 The Edentulous Maxilla and Mandible	515
Full rehabilitation of the maxilla and mandible	516
3D diagnosis	516
3D planning for implant placement in the maxilla and a Sliwowski Overdenture System (SOS) in the mandible	516
3D planning for sinus elevation in the maxilla and implant placement in the mandible	518
Typical treatment course	520
Bar structures with locking attachments in both maxilla and mandible	520
Sinus elevation and subsequent implant placement, reconstruction of the gingival zone	524
<i>Note on split-thickness flaps and roll flaps</i>	528
Atypical treatment course – problematic baseline situation	532
Sinus elevation, subsequent implant placement without immediate prosthetic loading	532
Switch from overdentures to implant-supported fixed restorations in both jaws	539
Problems and complications	544
Complication following an earlier treatment with disk implants in a heavy smoker with poor oral hygiene	544
Implant-supported restoration in a heavy smoker with poor oral hygiene	555
Immediate loading	563
Immediate restoration of provisional implants directly after dental treatment	563
Immediate restoration of provisional implants in the maxilla and definitive implants in the mandible, with a life-threatening complication	572
<i>Notes on life-threatening hemorrhage</i>	576
References	577
List of materials	578
