Preface *XIII*

List of Contributors *XV*

1	<b>Green Extraction: From Concepts to Research, Education, and Economical Opportunities</b> <i>1</i> <i>Farid Chemat, Natacha Rombaut, Anne-Sylvie Fabiano-Tixier, Jean T. Pierson, and Antoine Bily</i>
1.1	Introduction <i>1</i>
1.2	Orange Fruit is not Limited to Produce Only Juice? <i>5</i>
1.3	Chemistry of Natural Products <i>9</i>
1.3.1	Primary Metabolites <i>9</i>
1.3.1.1	Glucides <i>9</i>
1.3.1.2	Lipids <i>10</i>
1.3.1.3	Amino Acids and Proteins <i>10</i>
1.3.2	Secondary Metabolites <i>12</i>
1.3.2.1	Terpenoids <i>12</i>
1.3.2.2	Alkaloids <i>14</i>
1.3.2.3	Polyphenols <i>14</i>
1.4	From Metabolites to Ingredients <i>17</i>
1.5	Green Extraction from Research to Teaching <i>22</i>
1.5.1	Principle: Innovation by Selection of Varieties and Use of Renewable Plant Resources <i>28</i>
1.5.2	Principle: Use of Alternative Solvents and Agro Solvent <i>28</i>
1.5.3	Principle: Production of Coproducts Instead of Waste to Include Biorefinery <i>29</i>
1.5.4	Principle: Prioritizing a Non-denatured and Biodegradable Extract without Contaminant <i>29</i>
1.6	Conclusions and Perspective <i>29</i>
	References <i>30</i>

<b>2</b>	<b>Process Engineering and Product Design for Green Extraction</b>	<b>37</b>
	<i>Simon Both, Reinhard Ditz, Martin Tegtmeier, Urban Jenelten, and Jochen Strube</i>	
2.1	Market and Market Development	37
2.2	Regulatory Framework	38
2.3	Systematic Apparatus and Process Design	39
2.3.1	Design of Experiments	40
2.3.2	Graphical Calculation Methods	40
2.3.3	Physicochemical Modeling	41
2.3.4	Approaches for Description of Diffusion	45
2.3.4.1	Maxwell-Stefan Approach	46
2.3.4.2	Calculation of Diffusion Coefficients	48
2.3.4.3	Thermodynamic Factor	49
2.3.4.4	Determination of Activity Coefficients	49
2.3.4.5	Proof of Principle	49
2.4	Model-Based Realization: Apparatus and Process Design	50
2.4.1	Quantification of Determining Factors	52
2.4.2	Proof of Principle – Process Optimization	53
2.4.3	Proof of Principle – Cost-Driven Decision	53
2.5	Extract Purification	54
2.5.1	Modeling Approaches	56
2.5.2	Scale-Up and Mini-plant	56
2.6	Total Process Development and Design	62
2.7	Conclusions and Summary	65
	Acknowledgments	66
	References	66
<b>3</b>	<b>Tailor-Made Production of Plants for Green Extraction</b>	<b>71</b>
	<i>Hansjoerg Hagels</i>	
3.1	Introduction	71
3.2	Sustainable Processes	72
3.2.1	Social Sustainability	73
3.2.2	Environmental Sustainability	74
3.2.3	Economic Sustainability	75
3.3	Production Technology	75
3.3.1	Choice of Cultivation Location	75
3.3.2	Crop Rotation	78
3.3.3	Fertilization	79
3.3.4	Organic Farming	82
3.4	Seed and Seed Stock	84
3.4.1	Breeding	84
3.4.2	Seed	88
3.4.3	Vegetative Propagation	88
3.4.4	Stock Maintenance	89
3.4.4.1	Diseases	89

3.4.5	Pests	90
3.4.5.1	Weed Control	90
3.4.6	Harvesting Technology	91
3.4.7	Purification of Harvest	91
3.4.8	Mechanical Treatment	91
3.4.9	Thermal Treatment	91
3.4.9.1	Natural Drying	92
3.4.9.2	Artificial Drying	92
3.5	Quality Criteria	92
3.5.1	Quality Management	92
3.5.2	Quality Control	95
	Glossary and Abbreviations	96
	References	96
	Further Reading	99
<b>4</b>	<b>Mass Transfer Enhancement for Solid–Liquid Extractions</b>	<b>101</b>
	<i>Simon Both, Jochen Strube, and Giancarlo Cravatto</i>	
4.1	Introduction	101
4.2	State of the Art Solid-Liquid Extraction	102
4.2.1	Batch Processes	105
4.2.2	Continuous Processes	106
4.2.3	Hydro- and Steam Distillation	109
4.2.4	Alembic Distillation	111
4.2.5	Mechanical Expression (Extrusion)	112
4.3	Enhancement of Solid–Liquid Extraction Processes	115
4.3.1	Microwave-Assisted Extraction (MAE)	115
4.3.2	Ultrasound-Assisted Extraction (UAE)	118
4.3.3	Turbo Extraction	119
4.4	Example Processes for Solid–Liquid Extraction Enhancement	122
4.4.1	Extraction of Polyphenols from Black Tea – Conventional and Ultrasound-Assisted Extraction	122
4.4.1.1	Material and Methods	123
4.4.1.2	Equipment Concepts	126
4.4.1.3	Equilibrium Line by Multistage Maceration and Total Extraction	127
4.4.1.4	Mass Transport Kinetics	130
4.4.1.5	Particle Size Distribution	131
4.4.1.6	SEM Measurements – Cell Disruption	132
4.4.1.7	Conclusions	132
4.4.2	Pilot Scale UAE of Clove Buds in Batch and Flow Reactors	134
4.4.2.1	Experimental Methods and Reactors	135
4.4.2.2	Results and Discussion	137
4.4.2.3	Conclusions	139
4.4.3	UAE and MAE of Lipids from Microalgae	139
4.4.3.1	Experimental Methods and Equipments	139

4.4.3.2	Conclusions	141
4.5	Conclusion	141
	Symbols	142
	References	142
<b>5</b>	<b>Fundamentals of Process-Intensification Strategy for Green Extraction Operations</b>	<b>145</b>
	<i>Tamara Allaf and Karim Allaf</i>	
5.1	Process-Intensification Strategy PI-S from High Capacity to High Controlled Quality Industrial Manufacturing	145
5.2	What Does "Intensified Industrial Manufacturing" Mean?	145
5.2.1	Unit Operation Performance	146
5.2.2	Final Product Quality	146
5.2.3	Equipment Reliability	147
5.3	Intensification Strategy as a Pluridimensional Approach	148
5.3.1	Objectives of Intensification Strategy	148
5.3.2	Specific Case of Food Industry	148
5.3.3	PI-S as a Continual Progressing-Development Strategy	148
5.4	Fundamentals for Starting Basis Analyses	149
5.4.1	Intensification Procedure	149
5.4.1.1	Intensification Cycle	149
5.4.1.2	Multi-cycle Intensification Procedure	150
5.4.1.3	Intensification Charter	150
5.4.2	Specificities of Instant Controlled Pressure DIC Drop in Process Intensification Strategy PI-S	151
5.4.2.1	Introduction	151
5.4.2.2	Transfer Phenomena in Instantaneous Controlled Pressure Drop DIC Treatment	152
5.4.2.3	DIC – Texturing	155
5.4.3	Mass Transfer by Permeability	156
5.5	Processes of Extraction	158
5.5.1	Extraction of Volatile Compounds	158
5.5.1.1	Kinetics	159
5.5.1.2	Intensification of Essential Oil Extraction	161
5.5.2	Case of Solvent extraction	162
5.5.2.1	Introduction	162
5.5.2.2	Extraction Process Issues	162
5.5.2.3	Kinetic Modeling	166
5.5.3	Conclusion: Process Intensification Strategy: How to Use PI-S Solvent Extraction Processes?	168
5.6	Conclusion	170
	References	170

<b>6</b>	<b>Panorama of Sustainable Solvents for Green Extraction Processes</b>	<b>173</b>
	<i>Iraj Koudous, Werner Kunz, and Jochen Strube</i>	
6.1	Introduction	173
6.2	Thermodynamic Models of Mixing and Dissolving	176
6.2.1	UNIFAC and Modified UNIFAC	176
6.2.2	The Hansen Solubility Parameters	178
6.2.3	COSMO and COSMO-RS	180
6.2.3.1	Example 1: Mutual Solubility of Acetone with Benzene, Chloroform, and Carbon disulfide	183
6.2.3.2	Example 2: Solubility Screening for Indigo	184
6.3	Solvent Selection for Green Solid–Liquid Extraction	187
6.3.1	General Green Solvent Ranking with COSMO-RS	188
6.3.2	Concrete Example: Solid–Liquid Extraction of Carnesol and Carnosic Acid from Sage	188
6.3.3	Experimental Validation of COSMO-RS Solvent Ranking	192
6.3.4	Conclusion	192
6.4	Alternative Solvents for Green Extraction	194
6.4.1	Ionic Liquids	194
6.4.2	Low-Transition-Temperature Mixtures and Deep Eutectic Solvents	196
6.4.3	Ionic Liquids Screening with COSMO-RS	197
6.5	Purification Strategies of Natural Products	199
6.5.1	Databased and Calculated Physicochemical Properties	204
6.5.2	Feed Characterization	213
6.5.2.1	Conceptual Process Design	216
6.5.2.2	Modeling Depths and Feed Characterization Approach	219
6.5.2.3	System 1: Vanillin	223
6.5.2.4	Potential Unit Operations for Product Purification	223
6.5.2.5	Data Evaluation	225
6.5.2.6	Model-Based Process Design and Calculation of Separation Costs	225
6.5.2.7	Separation Cost Estimation	228
6.5.2.8	System 2: Tea Aroma	228
6.5.2.9	Data for Potential Unit Operation	228
6.5.2.10	Process Design and Cost Estimation	229
6.5.2.11	Discussion and Conclusions	230
	Symbols	231
	Greek Letters	232
	Indices	232
	References	232

7	<b>Water as Green Solvent for Extraction of Natural Products</b> 237 <i>Loïc Petigny, Mustafa Zafer Özel, Sandrine Périno, Joël Wajsman, and Farid Chemat</i>
7.1	Introduction 237
7.2	Maceration 239
7.2.1	Principle and Process 239
7.2.2	Applications 240
7.3	Subcritical Water Extraction 243
7.3.1	Principle and Process 243
7.3.2	Applications 245
7.4	Enzymatic Assistance 248
7.4.1	Principles and Process 248
7.4.2	Applications 249
7.5	Micellar Extraction 251
7.5.1	Principle and Process 251
7.5.2	Applications 252
7.6	Hydrotropes 255
7.6.1	Principles and Process 255
7.6.2	Applications 256
7.7	Conclusion 259
	References 260
8	<b>Coverage Exploitation of By-Products from the Agrofood Industry</b> 265 <i>Carlos A. Ledesma-Escobar and María D. Luque de Castro</i>
8.1	Introduction 265
8.2	Treatments for Safe Disposal/Exploitation of Agrofood Wastes or Residues 265
8.2.1	Physical Processes 266
8.2.2	Physicochemical Processes 267
8.2.3	Advanced Oxidation Processes 267
8.2.4	Thermal Processes 268
8.2.5	Biological Treatments 270
8.3	Exploitation of By-products from Olive Trees and Olive Oil Production 271
8.3.1	Generalities 271
8.3.2	Exploitation of Alpechín 277
8.3.3	Overall Use of Either Alperujo or Orujo 278
8.3.4	Partial Use of Either Alpechín or Alperujo 279
8.3.5	Olive Leaf Exploitation 280
8.3.6	Foreseeable/Desirable Future Uses of Olive Tree–Olive Oil Wastes 280
8.4	Exploitation of By-products from Vineyards and Wine Production 283
8.4.1	Generalities 283

8.4.2	Types and Characteristics of Vineyard Residues	286
8.4.3	Present and Potential Exploitation of Vineyard Residues	286
8.4.4	Types and Characteristics of Wine Residues	288
8.4.5	Present and Potential Exploitation of Wine Residues: Overall and Partial Exploitation	288
8.5	Exploitation of By-products from the Citrus Juice Industry	291
8.5.1	Generalities	291
8.5.2	Uses and Potential Applications of Bioactive Compounds from Citrus Residues	293
8.5.3	Potential Exploitation of Citrus Residues for Energy Production	296
8.5.4	Other Overall and Partial Uses of Citrus Residues	297
	Acknowledgments	297
	List of Abbreviations	298
	References	298
<b>9</b>	<b>Selective Extraction from Food Plants and Residues by Pulsed Electric Field</b>	<b>307</b>
	<i>Eugene Vorobiev and Nikolai Lebovka</i>	
9.1	Introduction	307
9.2	Basics of PEF-Assisted Extraction	308
9.3	Application of PEF for Different Food Plants and Residues	310
9.3.1	Sugar Beets	310
9.3.2	Red Beets	313
9.3.3	Chicory Roots	316
9.3.4	Apples	317
9.3.5	Grapes	318
9.3.6	Other Fruits and Vegetables	319
9.3.7	Egg Yolk	320
9.3.8	Bio-suspensions and Yeasts	320
9.3.9	Microalgae	321
9.3.10	Rhizomes	323
9.3.11	Bones	323
9.3.12	Eggshell	324
9.3.13	Leaves	324
9.3.14	Herbs	324
9.3.15	Ginseng	325
9.3.16	Peels	325
9.3.17	Mushrooms	325
9.3.18	Juices and Juice-Based Beverages	326
9.4	Conclusions	327
	Acknowledgments	327
	References	327

10	<b>Green Extraction of Artemisinin from <i>Artemisia annua</i> L</b>	333
	<i>Alexei A. Lapkin</i>	
10.1	Introduction	333
10.2	Extraction Technologies for Isolation of Artemisinin from <i>A. annua</i>	333
10.2.1	Industrial Extraction Processes	336
10.2.2	Cleaner and Intensified Processes for Extraction of Artemisinin	339
10.2.2.1	Innovative Process Conditions for Extraction	339
10.2.2.2	Alternative Solvents for Extraction of Artemisinin	340
10.3	Innovation in Artemisinin Purification	346
10.3.1	Hybrid Adsorption–Crystallization Separation	346
10.3.2	Column and HPLC Chromatography	347
10.3.3	Countercurrent Chromatography	348
10.4	Analysis of Artemisinin and Co-metabolites	348
10.5	Conclusions and Outlook	350
	References	351
