Preface *XIII*

List of Contributors *XV*

1	High-Oxidation State Molybdenum and Tungsten Complexes Relevant to Olefin Metathesis	1
	<i>Richard R. Schrock</i>	
1.1	Introduction	1
1.2	New Imido Ligands and Synthetic Approaches	2
1.3	Bispyrrolide and Related Complexes	9
1.4	Monoalkoxide Pyrrolide (MAP) Complexes	12
1.5	Reactions of Alkylidenes with Olefins	14
1.6	Olefin and Metallacyclopentane Complexes	17
1.7	Tungsten Oxo Complexes	21
1.8	Bisaryloxides	23
1.9	Other Constructs	24
1.10	Conclusions	27
	Acknowledgments	27
	References	27
2	Alkane Metathesis	33
	<i>Jean-Marie Basset, Emmanuel Callens, and Nassima Riache</i>	
2.1	Introduction	33
2.2	Alkane Metathesis by Single-Catalyst Systems	35
2.2.1	Supported Metal Hydrides	35
2.2.1.1	Supported Zr-Polyhydrides	35
2.2.1.2	Supported Ta-Polyhydrides	36
2.2.1.3	Supported W-Polyhydrides	42
2.2.2	Metal Alkylidene/Alkylidyne on Surface Oxide	44
2.2.2.1	Structure–Activity Relationship of Alkylidene Complexes	44
2.2.2.2	Stoichiometric Activity of Well-Defined, Metal Alkylidenes with Alkanes	47
2.2.2.3	Synthesis of Supported WMe ₆ on Silica	47

2.3	Alkane Metathesis by Tandem, Dual-Catalytic Systems	49
2.3.1	Introduction	49
2.3.2	The Chevron Process Using WO_3/SiO_2 and $\text{Pt-Li/Al}_2\text{O}_3$	49
2.3.3	Tandem, Dual Catalytic System Using Ir-Pincer Ligands and Mo-Alkylidene Complexes	50
2.3.3.1	The Development of Robust, Iridium-Based Alkane Dehydrogenation Catalysts	51
2.3.3.2	Cyclic and Cross-Alkane Metathesis	62
2.4	Conclusion	64
	References	65
3	Diastereocontrol in Olefin Metathesis: the Development of Z-Selective Ruthenium Catalysts	71
	<i>Benjamin K. Keitz</i>	
3.1	Introduction	71
3.2	The Challenge of Z-Selective Olefin Metathesis	71
3.3	Previous Strategies	72
3.4	A Serendipitous Discovery	73
3.5	Catalyst Studies	74
3.5.1	Summary of Substituent Effects	74
3.5.1.1	Investigating the X-type Ligand	75
3.5.1.2	Effect of the NHC	77
3.5.2	Decomposition of Z-Selective Ru Metathesis Catalysts	78
3.6	Applications of Z-Selective Ru Metathesis Catalysts	79
3.6.1	Cross Metathesis	79
3.6.1.1	Homodimerization or Homocoupling	79
3.6.1.2	Other Cross-Metathesis Reactions	80
3.6.2	Ring-Closing Metathesis (RCM)	81
3.6.3	Ring-Opening Metathesis Polymerization (ROMP)	81
3.7	Conclusion	83
	References	84
4	Ruthenium Olefin Metathesis Catalysts Supported by Cyclic Alkyl Aminocarbenes (CAACs)	87
	<i>David S. Weinberger and Vincent Lavallo</i>	
4.1	Introduction	87
4.2	Properties and Preparation of CAAC Ligands	87
4.3	CAAC-Supported, Ruthenium Olefin Metathesis Catalysts	89
4.3.1	CAAC Catalyst Development and Their Application to Ring-Closing Metathesis	89
4.3.2	Application to Cross Metathesis, Ethenolysis, and Degenerate Metathesis	91
4.4	Summary	94
	References	94

5	Supported Catalysts and Nontraditional Reaction Media	97
	<i>Daryl P. Allen</i>	
5.1	Introduction	97
5.2	Supported Catalyst Systems	98
5.2.1	Supported Catalysts via Covalent Interactions	99
5.2.1.1	Grubbs-Type, Ru-Based Systems	99
5.2.1.2	Schrock-Type, Mo- or W-Based Systems	119
5.2.2	Supported Catalysts via Non-covalent Interactions	126
5.2.2.1	Grubbs-Type, Ru-Based Systems	126
5.2.2.2	Early Transition-Metal Systems	136
5.3	Olefin Metathesis in Nontraditional Media	136
5.3.1	Olefin Metathesis in Water	137
5.3.1.1	Modified Catalyst Architectures	137
5.3.1.2	Commercially Available Catalysts	141
5.3.2	Olefin Metathesis in Ionic Liquids	145
5.3.2.1	Neutral Catalyst Systems	146
5.3.2.2	Ionic Modification to the Catalyst System	147
5.3.3	Olefin Metathesis in Fluorous Media	149
5.4	Conclusions	151
	References	152
 6	 Insights from Computational Studies on d^0 Metal-Catalyzed Alkene and Alkyne Metathesis and Related Reactions	 159
	<i>Xavier Solans-Monfort, Christophe Copéret, and Odile Eisenstein</i>	
6.1	Introduction	159
6.2	Alkene Metathesis	160
6.2.1	Well-Defined Systems	164
6.2.1.1	Electronic Structure of $M(ER^1)(=CHR^2)(X)(Y)$ Molecular Catalysts	164
6.2.1.2	Electronic Structure of Silica-Supported $(\equiv SiO)M(ER^1)(=CHtBu)(X)$ Catalysts	167
6.2.1.3	Electronic Structure of Metallacyclobutane Intermediates for the Molecular Catalysts	168
6.2.1.4	Alkene Metathesis Pathway for Well-Defined Catalysts	168
6.2.1.5	Deactivation and By-Product Formation Pathways for $M(ER^1)(=CHR^2)(X)(Y)$ Catalysts	173
6.2.2	Classical, Heterogeneous Catalysts	176
6.2.2.1	MoO_3 on Alumina	176
6.2.2.2	MoO_3 on Silica	179
6.2.2.3	MoO_3 on Zeolites	180
6.2.2.4	Re_2O_7 on Alumina and Silica: Alumina and Related Alumina-Supported CH_3ReO_3 Systems	180
6.3	Alkyne Metathesis	182
6.3.1	Group 6 $M(\equiv CR)(X)(Y)_2$ Alkylidyne Complexes in Alkyne Metathesis	184

6.3.2	Nitrile-Alkyne Cross Metathesis by the Reaction of $W(N)X_3$ with 2-Butyne	186
6.4	Alkane Metathesis	186
6.4.1	Reactivity of Tantalum Hydrides	187
6.4.2	Reactivity of the Alumina-Supported, Bisalkyl Alkylidyne Tungsten Catalysts	189
6.5	Outlook	191
	References	192
7	Computational Studies of Ruthenium-Catalyzed Olefin Metathesis	199
	<i>Peng Liu, Buck L. H. Taylor, Jesus Garcia-Lopez, and Kendall N. Houk</i>	
7.1	Introduction	199
7.2	Computational Investigations of Non-Chelated Ruthenium Catalysts	200
7.2.1	Reaction Mechanisms	200
7.2.1.1	General Mechanism	200
7.2.1.2	Associative and Dissociative Mechanisms for Initiation	201
7.2.1.3	Initiation of Catalysts with Hemilabile Ligands	202
7.2.1.4	Bottom-Bound and Side-Bound Olefin Complexes	203
7.2.1.5	Structure of the Metallacyclobutane	206
7.2.2	Effects of Spectator Ligands	208
7.2.2.1	Stability of the Metallacyclobutane	209
7.2.2.2	Binding of Phosphine and Olefin Ligands	210
7.2.2.3	Rotameric Effects on the Alkylidene	211
7.2.2.4	Effect of Anionic Ligands	215
7.2.2.5	Summary of Ligand Effects	216
7.2.3	<i>E/Z</i> Selectivity	216
7.2.4	Reactivities of Substituted Olefins	219
7.2.5	Computations on Different Types of Olefin Metathesis Reactions	221
7.2.5.1	Ring-Opening Metathesis Polymerization	223
7.2.5.2	Ring-Closing Metathesis	225
7.2.5.3	Enyne Metathesis	227
7.2.6	Decomposition of Ruthenium Olefin Metathesis Catalysts	229
7.2.7	Alkene Isomerization	232
7.3	Computational Investigations of Chelated, <i>Z</i> -Selective Ruthenium Catalysts	236
7.3.1	Mechanism and Origins of <i>Z</i> Selectivity	238
7.3.2	Decomposition Pathways of the Chelated Ruthenium Catalysts	244
7.4	Accuracy of the Computational Methods	247
	References	249

8	Intermediates in Olefin Metathesis 253
	<i>Anna G. Wenzel</i>
8.1	Introduction 253
8.2	Metathesis-Active, Early-Metal Metallacycles 253
8.3	Intermediates in Ruthenium-Catalyzed Olefin Metathesis 258
8.3.1	Ruthenacyclobutane Intermediates Derived from Phosphonium Alkylidene Complexes 260
8.3.2	Ruthenacyclobutane Intermediates Derived from Bispyridyl Complexes 267
8.3.3	Ruthenium Alkylidene/Olefin Intermediates 268
8.4	Future Directions 269
	References 269
9	Factors Affecting Initiation Rates 273
	<i>Justin R. Griffiths and Steven T. Diver</i>
9.1	Introduction 273
9.1.1	Discussion of General Terms 273
9.1.2	Experimental Measurement of Initiation Rates 274
9.2	Grubbs Second-Generation Catalyst 276
9.2.1	Phosphine Dissociation Related to Initiation and Metathesis Efficiency 276
9.2.2	Halide Substitution 279
9.2.3	Solvent Effects 280
9.2.4	Effect of Alkene Structure 281
9.3	Grubbs–Hoveyda-Type Precatalysts 281
9.4	Pyridine Solvates 289
9.5	Piers Catalysts 290
9.6	Indenylidene Carbene Precatalysts 293
9.7	Z-Selective Catalysts 296
9.8	Herrmann-Type, BisNHCs 298
9.9	Conclusions 299
	Acknowledgments 302
	References 302
10	Degenerate Metathesis 305
	<i>Ian C. Stewart</i>
10.1	Introduction 305
10.2	Degenerate Metathesis Mechanisms 305
10.2.1	Potential Impact on Catalyst Efficiencies 306
10.3	Degenerate Metathesis with Early Transition-Metal Catalysts 307
10.3.1	Homogeneous, Early Transition-Metal Catalysts 307
10.3.2	Heterogeneous, Early Transition-Metal Catalysts 310
10.3.3	Conclusions on Degenerate Metathesis with Early Transition-Metal Catalysts 314
10.4	Degenerate Metathesis with Ruthenium Catalysts 315

10.5	Beneficial Effects of Degenerate Metathesis	318
10.6	Conclusions	321
	References	321
11	Mechanisms of Olefin Metathesis Catalyst Decomposition and Methods of Catalyst Reactivation	323
	<i>Yann Schrodi</i>	
11.1	Introduction	323
11.2	Decomposition of Mo and W Imido Alkylidene Catalysts and Related Complexes	324
11.2.1	Mechanisms of Decomposition of Mo and W Systems	324
11.2.2	Strategies to Extend the Lifetime of Mo and W Catalysts	327
11.3	Decomposition of Ru Alkylidene Catalysts and Related Complexes	328
11.3.1	Thermal Decomposition of First-Generation Systems	328
11.3.2	Thermal Decomposition of Second-Generation Systems	333
11.3.3	Decomposition in the Presence of Small Molecules and Functional Groups	335
11.3.4	Strategies to Prevent the Decomposition of Ru Catalysts	337
11.3.5	Reactivation of Ruthenium Catalysts	338
11.4	Conclusions	339
	References	340
12	Solvent and Additive Effects on Olefin Metathesis	343
	<i>Shawn K. Collins</i>	
12.1	General Introduction	343
12.2	Solvent Effects on Olefin Metathesis	344
12.3	Additive Effects in Olefin Metathesis	354
12.4	Summary	374
	References	375
13	Metathesis Product Purification	379
	<i>David W. Knight</i>	
13.1	Introduction	379
13.2	Chromatographic and Chemical Removal of Ruthenium	380
13.3	Removal by Complexation	381
13.4	Conclusion	386
	References	386
14	Ruthenium Indenylidene Catalysts for Alkene Metathesis	389
	<i>Pierre H. Dixneuf and Christian Bruneau</i>	
14.1	Introduction	389
14.2	The Initial Development of Indenylidene Metal Complexes for Alkene Metathesis	390
14.2.1	The Ruthenium Allenylidene Precursors	390

14.2.2	From Allenylidene to Indenylidene Ruthenium Complexes and Catalysts	391
14.2.3	Intramolecular Allenylidene-into-Indenylidene Rearrangements	393
14.3	Binuclear Indenylidene Ruthenium Catalysts Arising from Ruthenium(arene) Complexes	394
14.4	Preparation of Ruthenium Indenylidene Catalysts from $\text{RuCl}_2(\text{PPh}_3)_3$	396
14.4.1	First-Generation Ruthenium Indenylidene Catalysts Bearing Two Phosphine Ligands	396
14.4.2	First-Generation Ruthenium Indenylidene Catalysts Bearing a Chelating Ligand	399
14.4.2.1	First-Generation Ruthenium Indenylidene Catalysts Bearing a Bidentate Schiff Base Ligand	399
14.4.2.2	First-Generation Ruthenium Indenylidene Catalysts Bearing a Bidentate Dichalcogenoimidodiphosphinate Ligand	400
14.4.3	Second-Generation Ruthenium Indenylidene Catalysts Bearing a N-Heterocyclic Carbene or a Chelating NHC-Phosphine Ligand	400
14.4.4	Second-Generation Ruthenium Indenylidene Catalysts Bearing a N-Heterocyclic Carbene Ligand and a Phosphite Ligand	403
14.4.4.1	Third-Generation Ruthenium Indenylidene Catalysts Bearing at least One Pyridine Ligand	404
14.5	Ruthenium Catalysts Bearing a Chelating Indenylidene Ligand	406
14.6	Conclusion	411
	References	412
