

Contents

1	Introduction	1
1.1	The Bilevel Optimization Problem	1
1.2	Possible Transformations into a One-Level Problem	2
1.3	An Easy Bilevel Optimization Problem: Continuous Knapsack Problem in the Lower Level	8
1.4	Short History of Bilevel Optimization	10
1.5	Applications of Bilevel Optimization	12
1.5.1	Optimal Chemical Equilibria	12
1.5.2	Optimal Traffic Tolls	13
1.5.3	Optimal Operation Control of a Virtual Power Plant	14
1.5.4	Spot Electricity Market with Transmission Losses	15
1.5.5	Discrimination Between Sets	16
1.5.6	Support Vector Machines	18
2	Linear Bilevel Optimization Problem	21
2.1	The Model and First Properties	21
2.2	Optimality Conditions	27
2.3	Solution Algorithms	33
2.3.1	Computation of a Local Optimal Solution	33
2.3.2	A Global Algorithm	35
3	Reduction of Bilevel Programming to a Single Level Problem	41
3.1	Different Approaches	41
3.2	Parametric Optimization Problems	47
3.3	Convex Quadratic Lower Level Problem	52
3.4	Unique Lower Level Optimal Solution	54
3.4.1	Piecewise Continuously Differentiable Functions	55
3.4.2	Necessary and Sufficient Optimality Conditions	59
3.4.3	Solution Algorithm	60

3.5	The Classical KKT Transformation	62
3.5.1	Stationary Solutions	62
3.5.2	Solution Algorithms	69
3.6	The Optimal Value Transformation	84
3.6.1	Necessary Optimality Conditions	85
3.6.2	Solution Algorithms	87
3.7	Primal KKT Transformation	95
3.8	The Optimistic Bilevel Programming Problem	100
3.8.1	One Direct Approach	100
3.8.2	An Approach Using Set-Valued Optimization	104
3.8.3	Optimality Conditions Using Convexifiers	113
4	Convex Bilevel Programs	117
4.1	Optimality Conditions for a Simple Convex Bilevel Program	117
4.1.1	A Necessary but Not Sufficient Condition	117
4.1.2	Necessary Tools from Cone-Convex Optimization	119
4.1.3	A Solution Algorithm	122
4.2	A Penalty Function Approach to Solution of a Bilevel Variational Inequality	125
4.2.1	Introduction	125
4.2.2	An Existence Theorem	126
4.2.3	The Penalty Function Method	128
4.2.4	An Example	130
5	Mixed-Integer Bilevel Programming Problems	133
5.1	Location of Integrality Conditions in the Upper or Lower Level Problems	133
5.2	Knapsack Constraints	136
5.3	Weak Solution	141
5.3.1	Regions of Stability	141
5.3.2	Properties of the Solution Sets	143
5.3.3	Extended Solution Sets	144
5.3.4	Solution Functions	145
5.3.5	Weak Solution Functions	147
5.3.6	Optimality Conditions	150
5.3.7	Computation of Optimal Solutions	156
5.4	Optimality Conditions Using a Radial-Directional Derivative	158
5.4.1	A Special Mixed-Discrete Bilevel Problem	158
5.4.2	Some Remarks on the Sets $\Psi_D(x)$ and $\mathcal{R}(y)$	161
5.4.3	Basic Properties of $\hat{\varphi}(x)$	163
5.4.4	The Radial-Directional Derivative	166

5.4.5	Optimality Criteria Based on the Radial-Directional Derivative.	168
5.4.6	Optimality Criteria Using Radial Subdifferential	173
5.5	An Approach Using Monotonicity Conditions of the Optimal Value Function	174
5.5.1	Introduction	174
5.5.2	Problem Formulation	175
5.5.3	Parametric Integer Optimization Problem	175
5.5.4	An Approximation Algorithm	179
5.6	A Heuristic Algorithm to Solve a Mixed-Integer Bilevel Program of Type I	182
5.6.1	Introduction	182
5.6.2	The Mathematical Model	182
5.6.3	The Problem's Geometry	183
5.6.4	An Approximation Algorithm	187
5.6.5	A Numerical Example	191
6	Applications to Natural Gas Cash-Out Problem.	195
6.1	Background.	195
6.2	Formulation of the Natural Gas Cash-Out Model as a Mixed-Integer Bilevel Optimization Problem.	197
6.2.1	The NGSC Model	198
6.2.2	The TSO Model	199
6.2.3	The Bilevel Model.	202
6.3	Approximation to a Continuous Bilevel Problem	202
6.4	A Direct Solution Approach	203
6.4.1	Linear TSO Objective Function	204
6.5	A Penalty Function Approach to Solve the Natural Gas Cash-Out Problem	204
6.6	An Expanded Problem and Its Linearization	207
6.6.1	Upper Level Expansion	208
6.6.2	Lower Level Expansion	209
6.6.3	Linearization of the Expanded NGSC Model.	211
6.7	Numerical Results	221
6.8	Bilevel Stochastic Optimization to Solve an Extended Natural Gas Cash-Out Problem	221
6.9	Natural Gas Market Classification Using Pooled Regression	228
6.9.1	Natural Gas Price-Consumption Model.	229
6.9.2	Regression Analysis.	231
6.9.3	Dendrogram-GRASP Grouping Method (DGGM)	233
6.9.4	Experimental Results	237

7 Applications to Other Energy Systems	243
7.1 Consistent Conjectural Variations Equilibrium in a Mixed Oligopoly in Electricity Markets	243
7.1.1 Introduction	243
7.1.2 Model Specification	247
7.1.3 Exterior Equilibrium	249
7.1.4 Interior Equilibrium	253
7.1.5 Numerical Results	262
7.2 Toll Assignment Problems	266
7.2.1 Introduction	267
7.2.2 TOP as a Bilevel Optimization Model	272
7.2.3 The Algorithm.	273
7.2.4 Results of Numerical Experiments	280
7.2.5 Supplementary Material	285
8 Reduction of the Dimension of the Upper Level Problem in a Bilevel Optimization Model	289
8.1 Introduction.	289
8.2 An Example	290
8.3 Relations Between Bilevel Problems (P1) and (MP1)	292
8.4 An Equivalence Theorem	294
8.5 Examples and Extensions	297
8.5.1 The Nonlinear Case	297
8.5.2 The Linear Case	300
8.5.3 Normalized Generalized Nash Equilibrium	302
References.	309
